The Health Effects of Cannabis and Cannabinoids National Academies of Sciences, Engineering, and Medicine 2017-03-31 Significant changes have taken place in the policy landscape surrounding cannabis legalization, production, and use. During the past 20 years, 25 states and the District of Columbia have legalized cannabis and/or cannabidiol (a component of cannabis) for medical conditions or retail sales at the state level and 4 states

have legalized both the medical and recreational use of cannabis. These landmark changes in policy have impacted cannabis use patterns and perceived levels of risk. However, despite this changing landscape, evidence regarding the short- and long-term health effects of cannabis use remains elusive. While a myriad of studies have examined cannabis use in all its various forms, often these research conclusions are not appropriately synthesized, translated for, or communicated to policy makers, health care providers, state health officials, or other stakeholders who have been charged with influencing and enacting policies, procedures, and laws related to cannabis use. Unlike other controlled substances such as alcohol or tobacco, no accepted standards for safe use or appropriate dose are available to help guide individuals as they make choices regarding the issues of if, when, where, and how to use cannabis safely and, in regard to therapeutic uses, effectively. Shifting public sentiment, conflicting and impeded scientific research, and legislative battles have fueled the debate about what, if any, harms or benefits can be attributed to the use of cannabis or its derivatives, and this lack of aggregated knowledge has broad public health implications. The Health Effects of Cannabis and Cannabinoids provides a comprehensive review of scientific evidence related to the health effects and potential therapeutic benefits of cannabis. This report provides a research agenda "outlining gaps in current knowledge and opportunities for providing additional insight into these issues" that summarizes and prioritizes pressing research needs.

NurseNotes Maternal-Newborn Janice McMillin 2005-01-01 I have found the ATI NurseNotes Maternal-Newborn text to be extremely useful in the undergraduate family health course that I teach. Its concise review of all of the essential content makes it an extremely user-friendly text, particularly for students who struggle as they try to take in a tremendous amount of material during the 14 week semester. Many of my previous students have sworn that they never would have successfully completed all of the course objectives without this volume. Linda Walsh, Faculty, University of San Francisco The best features of this book: 1. Concise, short chapters followed immediately by practice questions, right after you have studied a topic. 2. An excellent framework for making your own condensed notes, to facilitate quick review. 3. Complete outline of each topic at the beginning of each chapter. 4. Use of unique symbols and boldface and italic type will help you to quickly identify each of the steps of the nursing process, hands-on nursing care, diets, medications, lab and diagnostic tests, and test-taking tips. 5. A FREE DISK with additional questions (with alternate item format) is also included for further practice and self-assessment.

Using the ATI Test as a Predictor of NCLEX-RN Success Sara Miles 2009 The National Council Licensure Examination for Registered Nurses (NCLEX-RN) is a standardized exam that all pre-licensure graduates of nursing programs in the United States must pass to obtain professional registered nurse licensure. Predicting NCLEX-RN success is an ongoing concern of students, educators, and schools of nursing. Computerized exams such as the Assessment Technologies Institute (ATI) exams are commonly used in many nursing programs as a tool to help predict success. At a private Midwestern university, a retrospective study was conducted to determine if a relationship existed between performance on the ATI exams and NCLEX-RN success. Two graduating classes (n = 37) of pre-licensure students were studied to determine the accuracy of predicting NCLEX-RN success using the ATI exams. Data were collected on student performance on ten ATI exam scores: Test of Essential Academic Skills (TEAS) test, Critical Thinking Composite, Fundamentals, Pharmacology, Pediatrics, Maternal Newborn, Mental Health, Medical Surgical, Community, and the Registered Nurse (RN) Predictor Exam. A questionnaire was sent to faculty administering the ATI to examine the emphasis placed on the exams. While the ATI exam scores strongly correlate with NCLEX-RN success, the results do not appear to be predictive of NCLEX-RN success within the sample size of this study.

Non-steroidal Anti-inflammatory Drugs IARC Working Group on the Evaluation of Cancer-preventive Agents 1997 The Handbook summarizes and evaluates the evidence for cancer preventive activity of aspirin and aspirin-like drugs. In addition, it summarizes other beneficial effects (anti-thrombotic effects in cardiovascular disease prevention) and adverse effects (gastrointestinal bleeding, adverse renal and hepatic effects) of aspirin and aspirin-like drugs.

Disease Control Priorities, Third Edition (Volume 2) Robert Black 2016-04-11 The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the

publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.
