**For a Voice and the Vote** Lisa Anderson Todd 2015-01-19 In this detailed memoir of political action, a civil rights volunteer recounts her experience with the MFDP during 1964's Freedom Summer. During the summer of 1964, hundreds of American college students descended on Mississippi to help the state's African

American citizens register to vote. Student organizers, volunteers, and community members canvassed black neighborhoods to organize the Mississippi Freedom Democratic Party, a group that sought to give a voice to black Mississippians despite the terror and intimidation they faced. In *For a Voice and the Vote*, author Lisa Anderson Todd gives a fascinating insider's account of her experience volunteering in Greenville, Mississippi, when she participated in organizing the MFDP. The party provided political education, ran candidates for office, and offered participation in local and statewide meetings for blacks who were denied the vote. For Todd, it was an exciting, dangerous, and life-changing experience. Offering the first full account of the group's five days in Atlantic City, the book draws on primary sources, oral histories, and the author's personal interviews of individuals who were supporters of the MFDP in 1964.

**Strengthening Forensic Science in the United States** National Research Council 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

*The Financial Crisis Inquiry Report* Financial Crisis Inquiry Commission 2011-05-01 The Financial Crisis Inquiry Report, published by the U.S. Government and the Financial Crisis Inquiry Commission in early 2011, is the official government report on the United States financial collapse and the review of major financial institutions that bankrupted and failed, or would have without help from the government. The commission and the report were implemented after Congress passed an act in 2009 to review and prevent fraudulent activity. The report details, among other things, the periods before, during, and after the crisis, what led up to it, and analyses of subprime mortgage lending, credit expansion and banking policies, the collapse of companies like Fannie Mae and Freddie Mac, and the federal bailouts of Lehman and AIG. It also discusses the aftermath of the fallout and our current state. This report should be of interest to anyone concerned about the financial situation in the U.S. and around the world. THE FINANCIAL CRISIS INQUIRY COMMISSION is an independent, bi-partisan, government-appointed panel of 10 people that was created to "examine the causes, domestic and global, of the current financial and economic crisis in the United States." It was established as part of the Fraud Enforcement and Recovery Act of 2009. The commission consisted of private citizens with expertise in economics and finance, banking, housing, market regulation, and consumer protection. They examined and reported on "the collapse of major financial institutions that failed or would have failed if not for exceptional assistance from the government." **Thinking and Acting Systemically** Alan Daly 2016-05-19 This volume argues that districts are important as a lever for change given the limited success of school-by-school efforts. Policies that focus on skill development, recognize and support performance, create opportunities for collaboration, build leader capacity, and create networks of knowledge sharing hold great potential for improving districts but it will require a paradigm shift in the way we view our public school system and those who work within it - away from blame and toward complex systems change.

**Weapons of Math Destruction** Cathy O'Neil 2016 Longlisted for the National Book Award New York Times Bestseller A former Wall Street quant sounds an alarm on the mathematical models that pervade modern life --

and threaten to rip apart our social fabric We live in the age of the algorithm. Increasingly, the decisions that affect our lives--where we go to school, whether we get a car loan, how much we pay for health insurance--are being made not by humans, but by mathematical models. In theory, this should lead to greater fairness: Everyone is judged according to the same rules, and bias is eliminated. But as Cathy O'Neil reveals in this urgent and necessary book, the opposite is true. The models being used today are opaque, unregulated, and uncontestable, even when they're wrong. Most troubling, they reinforce discrimination: If a poor student can't get a loan because a lending model deems him too risky (by virtue of his zip code), he's then cut off from the kind of education that could pull him out of poverty, and a vicious spiral ensues. Models are propping up the lucky and punishing the downtrodden, creating a "toxic cocktail for democracy." Welcome to the dark side of Big Data. Tracing the arc of a person's life, O'Neil exposes the black box models that shape our future, both as individuals and as a society. These "weapons of math destruction" score teachers and students, sort r sum s, grant (or deny) loans, evaluate workers, target voters, set parole, and monitor our health. O'Neil calls on modelers to take more responsibility for their algorithms and on policy makers to regulate their use. But in the end, it's up to us to become more savvy about the models that govern our lives. This important book empowers us to ask the tough questions, uncover the truth, and demand change. -- Longlist for National Book Award (Non-Fiction) -- Goodreads, semi-finalist for the 2016 Goodreads Choice Awards (Science and Technology) -- Kirkus, Best Books of 2016 -- New York Times, 100 Notable Books of 2016 (Non-Fiction) -- The Guardian, Best Books of 2016 -- WBUR's "On Point," Best Books of 2016: Staff Picks -- Boston Globe, Best Books of 2016, Non-Fiction

*Cognition and Curriculum Reconsidered* Elliot W. Eisner 1994 When Professor Eisner expanded his 1980 John Dewey Lecture into *Cognition and Curriculum*, the result was hailed as having the potential to "shake up the educational decision makers as Dewey's *Experience and Education* did." *Detracking for Excellence and Equity* Carol Corbett Burris 2008 Ability grouping. Leveling systems. Streaming. This is the modern way of talking about tracking -- the traditional practice of sorting and selecting students based on test scores and other criteria, and then steering these groups into "the most appropriate" course of study. In 1987, New York's suburban Rockville Centre School District faced the fact that its longstanding tracking system was resulting in unequal educational opportunities and allowing racial and socioeconomic stratification of its student population. School leaders embarked on an ambitious program of reform: reexamining beliefs about intelligence, ability, and instruction, and offering all students the opportunity to study a rigorous curriculum in heterogeneous classrooms. In this book, authors Carol Corbett Burris and Delia T. Garrity, veterans of the Rockville Centre School District, offer an experience-based and research-supported argument that detracking--implemented with planning, patience, and persistence--can do in every school district what it did in theirs: raise achievement across the board and dramatically narrow the achievement gap. Their main goal is a practical one: to provide educational leaders with proven strategies for launching, sustaining, and monitoring a successful detracking reform. Here, you'll read \* Why detracking is necessary, the benefits it brings, and how to build support among teachers and parents \* How to revise curriculum to "level-up" instruction \* How to establish a multiyear, personalized professional development program to help teachers address new instructional needs \* How to best support effective teaching and learning in a heterogeneous classroom *Detracking for Excellence and Equity* outlines a comprehensive approach built on self-reflection, direct action, vigilant supervision, and a set of very clear beliefs: that schools

and opportunity matter; that acceleration and enrichment will improve all students' achievement; and that all students deserve access to the best curriculum.

Virtual Currencies and Beyond Mr.Dong He 2016-01-20 New technologies are driving transformational changes in the global financial system. Virtual currencies (VCs) and the underlying distributed ledger systems are among these. VCs offer many potential benefits, but also considerable risks. VCs could raise efficiency and in the long run strengthen financial inclusion. At the same time, VCs could be potential vehicles for money laundering, terrorist financing, tax evasion and fraud. While risks to the conduct of monetary policy seem less likely to arise at this stage given the very small scale of VCs, risks to financial stability may eventually emerge as the new technologies become more widely used. National authorities have begun to address these challenges and will need to calibrate regulation in a manner that appropriately addresses the risks without stifling innovation. As experience is gained, international standards and best practices could be considered to provide guidance on the most appropriate regulatory responses in different fields, thereby promoting harmonization and cooperation across jurisdictions.

**International Reflections on the Netherlands Didactics of Mathematics** Marja van den Heuvel-Panhuizen 2019-08-13 This open access book, inspired by the ICME 13 Thematic Afternoon on “European Didactic Traditions”, takes readers on a journey with mathematics education researchers, developers and educators in eighteen countries, who reflect on their experiences with Realistic Mathematics Education (RME), the domain-specific instruction theory for mathematics education developed in the Netherlands since the late 1960s. Authors from outside the Netherlands discuss what aspects of RME appeal to them, their criticisms of RME and their past and current RME-based projects. It is clear that a particular approach to mathematics education cannot simply be transplanted to another country. As such, in eighteen chapters the authors describe how they have adapted RME to their individual circumstances and view on mathematics education, and tell their personal stories about how RME has influenced their thinking on mathematics education.
