Role Dynamics in Pharma Sales Management Dr V K Sharma Pharma field sales professionals struggle this one question very often- What is the role of my position and sometimes my seniors' position too. the prime reason of this struggle is that Pharma industry never seriously tried to define different field sales management roles. As this job

differentiation is not in public domain, Some Managers used and abused this situation as it suits them. Instead of putting these different roles in public domain, Managers prefer to enjoy this ambiguity by defining the roles differently in different times in different organizations. This virtually divide field sales professionals in two classes- the persecutors and victims or afflicted peoples. It is unfortunate that Pharma Industry never thought of bringing this issue in public domain. As a part of effective pharma field sales management, different organizations at different stages need customized re-drawing of these role's bifurcation. This need further fueled the blurredness in this area.

Guide to EU Pharmaceutical Regulatory Law Sally Shorthose 2017-02-17 In the European Union (EU) and its Member States, as elsewhere, the marketing of pharmaceuticals has become subject to an increasingly complex web of legislation and regulation, resulting from the intense scrutiny necessary to ensure such essential products are not only efficacious but safe. This useful volume lays out this system with extraordinary clarity and logic. Adopting a Europe-wide perspective on the law governing pharmaceuticals, expert authors from the law firm Bird & Bird LLP map the life cycle of a medicinal product or medical device from development to clinical trials to product launch and ongoing pharmacovigilance, offering comprehensive and unambiguous guidance at every stage. A brief overview of how the proposed exit from the EU by the UK will affect the regulatory regime is also included. Following an introductory overview focusing on the regulatory framework for pharmaceuticals in Europe - from its underlying rationales to the relevant committees and agencies - each of fifteen incisive chapters examines a particular process or subject. Among the many topics and issues covered are the following: - obtaining a marketing authorisation; - stages and standards for creating a product dossier; - clinical trials; - how and when an abridged procedure can be used; - criteria for conditional marketing authorisations; - generic products and 'essential similarity'; - paediatric use and the requisite additional trials; - biologicals and 'biosimilars'; - homeopathic and herbal medicines; - reporting procedures; - pharmacovigilance; - parallel trade; - relevant competition law and intellectual property rights; and - advertising. In addition, national variation charts in many of the chapters illustrate eight major jurisdictions (Belgium, France, Germany, Italy, The Netherlands, Spain, Sweden, and the UK). Sample forms and URLs for the most important Directives are included. Pharmaceutical lawyers and regulatory advisers, both in-house and in private practice, will welcome this unique book. It offers immeasurable value for all who need to understand the process of bringing a medicinal product or medical device to market and the continuing rights and obligations.
