Queer Youth, Suicide and Self-Harm E. McDermott 2016-04-08 Offering a new way of understanding the high self-harm and suicide rates among sexual and gender minority youth, this book prioritises the perspectives and experiences of queer young people, including those who have experience of self-harming and/or feeling suicidal. Presenting analysis based on research carried out with young people both online and face-to-face, the authors offer a critical perspective on the role of norms, namely developmental norms, gender and sexuality norms, and neoliberal norms, in the production of self-harming and suicidal youth. Queer Youth, Suicide and Self-Harm is unique in the way it works at the intersection of class and sexuality, and in its specific focus on transgender youth and the concept of embodied distress. It also examines the implications of this research for self-harm reduction and suicide prevention.

Ethics in Nursing Practice Sara T. Fry 2002 The International Council of Nurses is an internationally recognised body that considers nursing issues in detail before putting forward best practice. This publication from the ICN draws upon everyday ethical dilemmas in nursing practice and responds to the realities of nursing and health care in a changing society. It includes the ICN's reviewed Guidelines for Nursing Research and promotes international standards for individual nurses, regulatory bodies and National Boards. This new edition provides the background theory necessary to understand ethical decision making, focusing on the individual nurse's responsibilities - promoting health, preventing illness, restoring health and alleviating suffering - and looking at the wider issues in relation to patients, colleagues and society as a whole.

The Economics of Ecosystems and Biodiversity: Ecological and Economic Foundations Pushpam Kumar 2012-12-20 Human well-being relies critically on ecosystem services provided by nature. Examples include water and air quality regulation, nutrient cycling and decomposition, plant pollination and flood control, all of which are dependent on biodiversity. They are predominantly public goods with limited or no markets and do not command any price in the conventional economic system, so their loss is often not detected and continues unaddressed and unabated. This in turn not only impacts human well-being, but also seriously undermines the sustainability of the economic system. It is against this background that TEEB: The Economics of Ecosystems and Biodiversity project was set up in 2007 and led by the United Nations Environment Programme to provide a comprehensive global assessment of economic aspects of these issues. This book, written by a team of

international experts, represents the scientific state of the art, providing a comprehensive assessment of the fundamental ecological and economic principles of measuring and valuing ecosystem services and biodiversity, and showing how these can be mainstreamed into public policies. This volume and subsequent TEEB outputs will provide the authoritative knowledge and guidance to drive forward the biodiversity conservation agenda for the next decade.

Storying Later Life Gary Kenyon 2010-12-20 In its brief but vigorous history, gerontology has spawned a broadening range of specializations. One of the newest of such specializations is narrative gerontology, so named for its emphasis on the biographical, or inside, dimensions of the experience of aging. Telling stories about our world, our relationships, and ourselves is fundamental to how we make meaning. Everything from our history to our religion and our memories to our emotions is linked to the tales we tell ourselves, and others, about where we have come from and where we are going. They are central to who we are. The biographical side of human life is every bit as critical to fathom as the biological side, if we seek a more balanced, positive, and optimistic perspective on what aging is about; if we would honor the dignity and complexity, the humanity and uniqueness of the lives of older persons, no matter what their health or economic standing. In this respect, a narrative approach is particularly suited to the exploration of such topics as meaning, spirituality, and wisdom, and the connections they share. This volume reflects a selection of new directions and insights, and constitutes a general broadening and deepening of narrative gerontology, exploring its implications for theory and research in the field of aging, and for the quality of life of older adults themselves. Such deepening indicates a greater refinement of thought, method, and intervention. The evolution of narrative gerontology is also evidenced by a significant increase in the number of faculty and graduate students engaged in research in this area, as well as by increasing collaboration among researchers, practitioners, and administrators in applying narrative insights to contexts such as long term care - indeed, healthcare in general. These initiatives have given rise to the phrase, "narrative care as core care".

Hand and Wrist Anatomy and Biomechanics Bernhard Hirt 2016-11-09 There is a saying that "hand surgery without a tourniquet is like repairing a clock in a barrel full of dark ink." Operating without a sound fundamental knowledge of anatomy can be compared to "stirring around in the soup." Classic anatomy instruction covers only a fraction of the area of hand surgery: bones, muscles/ligaments, vessels, and nerves. The many different connective-tissue structures are often only briefly highlighted. The complex interaction of the various structures remains a mystery to most. This book presents the specialty of applied anatomy and is intended for medical professionals involved with the hand and its functionality: hand surgeons, trauma specialists, orthopaedists, plastic surgeons, occupational therapists, and physiotherapists. Key Features: Almost 150 illustrations, anatomical drawings, and photos of anatomy in vivo. Part 1 deals with the anatomy and functional anatomy of the hand Part 2 is dedicated to the surface anatomy of the structures of the forearm, wrist, and hand

Your Customers Will Never Stop to Use this Awesome Book! At some point in our lives, we get to a place where we struggle with our weight. The world has a general perspective of how they think a person's body should look like. Unfortunately, this perspective of the ideal body shape is not consistent as it changes from generation to generation. There was a time when being skinny was the look, and then people moved on to the full-figured type of body. And as the world got bored with this, they moved onto the lean, slender, and slightly muscular kind of body. We should not buy into the belief that there is a general consensus for what the ideal body type should be, and in this guidebook, we are not going to try and push you in that direction-especially when you have accepted the knowledge that every individual is different, and it is because of this difference that we have a peculiar weight or look that is ideal for us. Going outside this ideal weight might lead to health complications. This book covers: - Meditation and Weight Loss - The Power of Guided Meditations - The Power of Affirmations - How to Find Motivation - Developing A Magnificent Self-Esteem - Daily Weight Loss Motivation with Mini Habits And much more! This guidebook is more dedicated to shaping you from the inside out than it is about the look you want to achieve externally. Prüfungswissen Altenpflege Ingrid Reifferscheid 2007

Eine Einführung in Intuitives Stillen Suzanne Colson 2013-01-01 Die Mehrheit des Gesundheitspersonals glaubt, dass Mütter im Stillen unterwiesen werden müssen. Dieses Buch liefert neue wissenschaftliche Belege, die zeigen, dass das Wissen, wie gestillt wird, Müttern und Babys angeboren ist, und stellt ein neues Konzept vor: das Intuitive Stillen. Intuitives Stillen ist ein Sammelbegriff für optimale Verhaltenszustände und Positionen zum Stillen, deren Aufeinandereinwirken spontane Verhaltensmuster bei Müttern und Babys auslöst, die ihnen helfen, mit dem Stillen zu beginnen. Intuitives Stillen ist schnell und einfach umzusetzen. Die meisten Mütter und Babys nehmen selbsttätig die richtige Position ein, wenn dies ohne fremdes Eingreifen von außen zugelassen wird. Die Aufgabe des Gesundheitspersonals besteht darin, die auslösenden Mechanismen zu verstehen und so zu lernen, wie sie Müttern und Babys helfen können, das zu machen, was diese intuitiv tun wollen. Dieses Buch stärkt das Vertrauen in die biologische Basis des Stillens und die angeborene Stillfähigkeit der Mütter. Dr. Suzanne Colson ist eine meiner Heldinnen, weil ihre aufmerksame und sorgfältige Forschung und die Schlussfolgerungen, die sie daraus gezogen hat, endlich gesunden Menschenverstand in die Diskussion über das Stillen gebracht hat. Ina May Gaskin, Hebamme und Autorin von Spirituelle Hebammen, Praktische Hebammen, Die selbstbestimmte Geburt und Ina May's Guide to Breastfeeding Der französische Geburtshelfer und Colsons Mentor, Michel Odent, veränderte unsere Art und Weise über die Geburt zu denken. Mit diesem Buch unternimmt Suzanne Colson dasselbe für das Stillen. Machen Sie sich bereit, viele Ihrer grundlegenden Annahmen über das Stillen zu überdenken - so, wie ich es getan habe - und lernen Sie einige revolutionäre, neue Wege, um Müttern und Babys zu

helfen. Dieses Buch wird Ihr Leben verändern! Nancy Mohrbacher, IBCLC, FILCA, Co-Autorin von *Breastfeeding Answers Made Simple* und *Breastfeeding Made Simple*

Ecosystem Services - Concept, Methods and Case Studies Karsten Grunewald 2015-05-18 Nature provides us with many services seemingly for free: recharged groundwater, fertile soil and plant biomass created by photosynthesis. We human beings draw extensive benefits from these "ecosystem services," or ES - food, water supply, recreation and protection from natural hazards. Major international studies, such as the Millennium Ecosystem Assessment, have addressed the enormous role of biodiversity and ecosystems to human well-being, and they draw particular attention to the consequences resulting from the reduction or loss of these services. These very topical issues are being addressed by authors/scientists in a wide variety of disciplines - and their approaches, terminologies and methodological specifics are just as diverse. What, for example, does the efficacy of nature or natural capital mean? Which values of nature are particularly important, how are they distributed in space and time and how can they be assessed and the relevant knowledge promoted? Can all ecosystem services be quantified and even monetarised? What should be done to ensure that the multiple services of nature will be available also in future? This book explains the multifaceted concept of ecosystem services, provides a methodological framework for its analysis and assessment, and discusses case examples, particularly from Germany. It is addressed to scientists and practitioners in the administrative, volunteer and professional spheres, especially those who deal with environment, landscape management and nature conservation and regional and land-use planning. The target group includes experts from the business community, politicians and decision makers, students and all those interested in fundamental ecological, economic, ethical and environmental issues.

Homo Sociologicus Ralf Dahrendorf 2022-02-09 First published in English as part of the *Essays in the Theory of Society*, this volume reissues the stand-alone *Homo Sociologicus* for which the author wrote a new introduction when it was originally published in 1973. The controversial book deals with the history, significance and limits of the category of social role and discusses the dilemma posed by *homo sociologicus*. The author shows that for society and sociology, socialization invariably means depersonalization, the yielding up of man's absolute individuality and liberty to the constraint and generality of social roles. This volume includes the essay, *Sociology and Human Nature*, written as a postscript to *Homo Sociologicus*.

Growth and International Trade Karl Farmer 2013-02-01 This textbook guides the reader towards various aspects of growth and international trade in a Diamond-type overlapping generations framework. Using the same model type throughout the book, timely topics such as growth with bubbles, debt reduction in rich countries and policies to mitigate climate change are explored . The first part starts from the “old” growth theory and bridges to the “new” growth theory (including R&D and human capital approaches). The second part presents an intertemporal equilibrium theory of inter and intra-sectoral trade and concludes by analyzing the debt mechanics inducing the huge imbalances among eurozone countries. The book is primarily addressed to graduate students wishing to proceed to the analytically more demanding journal literature.

Mathematics Classrooms in Twelve Countries David Clarke 2006 This book reports the accounts of researchers investigating the eighth grade mathematics classrooms of teachers in Australia, China, the Czech Republic, Germany, Israel, Japan, Korea, The Philippines, Singapore, South Africa, Sweden and the USA. This combination of countries gives good representation to different European and Asian educational traditions, affluent and less affluent school systems, and mono-cultural and multi-cultural societies. Researchers within each local group focused their analyses on those aspects of practice and meaning most closely aligned with the concerns of the local school system and the theoretical orientation of the researchers. Within any particular educational system, the possibilities for experimentation

and innovation are limited by more than just methodological and ethical considerations: they are limited by our capacity to conceive possible alternatives. They are also limited by our assumptions regarding acceptable practice. These assumptions are the result of a long local history of educational practice, in which every development was a response to emergent local need and reflective of changing local values. Well-entrenched practices sublimate this history of development. The Learner's Perspective Study is guided by a belief that we need to learn from each other. The resulting chapters offer deeply situated insights into the practices of mathematics classrooms in twelve countries: an insider's perspective. The Project The Learner's Perspective Study aims to juxtapose the observable practices of the classroom and the meanings attributed to those practices by classroom participants. The LPS research design documents sequences of at least ten lessons, using three video cameras, supplemented by the reconstructive accounts of classroom participants obtained in post-lesson video-stimulated interviews, and by test and questionnaire data, and copies of student written material. In each participating country, data generation focuses on the classrooms of three teachers, identified by the local mathematics education community as competent, and situated in demographically different school communities within the one major city. The large body of complex data supports both the characterisation of practice in the classrooms of competent teachers and the development of theory.

Experiments in Ethics Kwame Anthony Appiah 2010-03-30 In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of “experimental philosophy,” provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and

ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.
