Innovative Mobile and Internet Services in Ubiquitous Computing Leonard Barolli 2018-06-07
This book presents the latest research findings, methods and development techniques related to Ubiquitous and Pervasive Computing (UPC) as well as challenges and solutions from both theoretical and practical perspectives with an emphasis on innovative, mobile and internet services. With the proliferation of wireless technologies and electronic devices, there is a rapidly growing interest in Ubiquitous and Pervasive Computing (UPC). UPC makes it possible to create a human-oriented computing environment where computer chips are embedded in everyday objects and interact with physical world. It also allows users to be online even while moving around, providing them with almost permanent access to their preferred services. Along with a great potential to revolutionize our lives, UPC also poses new research challenges.

Algorithms for Verifying Deep Neural Networks Changliu Liu 2021-02-11 Neural networks have been widely used in many applications, such as image classification and understanding, language processing, and control of autonomous systems. These networks work by mapping inputs to outputs through a sequence of layers. At each layer, the input to that layer undergoes an affine transformation followed by a simple nonlinear transformation before being passed to the next layer. Neural networks are being used for increasingly important tasks, and in some cases, incorrect outputs can lead to costly consequences, hence validation of correctness at each layer is vital. The sheer size of the networks makes this not feasible using traditional methods. In this monograph, the authors survey a class of methods that are capable of formally verifying properties of deep neural networks. In doing so, they introduce a unified mathematical framework for verifying neural networks, classify existing methods under this framework, provide pedagogical implementations of existing methods, and compare those methods on a set of benchmark problems. Algorithms for Verifying Deep Neural Networks serves as a tutorial for students and professionals interested in this emerging field as well as a benchmark to facilitate the design of new verification algorithms.

Take a Bow Jennifer Searls 2006-02-01 Michelle Rose is a typical teenage girl who has big dreams. She'll tell you herself in this journal-style story about an aspiring actress and the road she travels from her teens to adulthood. You'll meet her large family, her friends, and her love interests. Michelle takes you through life's ups and downs, all while trying to uphold her moral character in situations dealing with her relationships and her career. And that is exactly what you are reading when you read *Take a Bow*--Michelle's most important moments in life, love, and how it all ends up. Does she become an actress? Does she marry the love of her life? Does she ever give up on what she believes in most? The only way to find out is to take Michelle's journey by reading her memoirs--just as she wanted you to.

Odes Sharon Olds 2016-09-20 Following the Pulitzer prize-winning collection *Stag's Leap*, Sharon Olds gives us a stunning book of odes. Opening with the powerful and tender "Ode to the Hymen," Olds addresses and embodies, in this age-old poetic form, many aspects of love and gender and sexual politics in a collection that is centered on the body and its structures and pleasures. The poems extend parts of her narrative as a daughter, mother, wife, lover, friend, and poet of conscience that will be familiar from earlier collections, each episode and memory burnished by the wisdom and grace and humor of looking back. In such poems as "Ode to My Sister," "Ode of Broken Loyalty," "Ode to My Whiteness," "Blow Job Ode," and "Ode to the Last Thirty-Eight Trees in New York City Visible from This Window," Olds treats us to an intimate examination that, like all her work, is universal, by turns searing and charming in its honesty. From the bodily joys and sorrows of childhood to the deaths of those dearest to us, Olds shapes the world in language that is startlingly fresh, profound in its conclusions, and life-giving for the reader.

Advances in Marine Antifouling Coatings and Technologies Claire Hellio 2009-05-22 Marine biofouling can be defined as the undesirable accumulation of microorganisms, algae and animals on structures submerged in seawater. From the dawn of navigation, marine biofouling has been a major problem for shipping in such areas as reduced speed, higher fuel consumption and increased corrosion. It also affects industries using off-shore structures such as oil and gas production and aquaculture. Growing concerns about the environmental impact of antifouling coatings has led to major new research to develop more environmentally-friendly alternatives. *Advances in marine antifouling coatings and technologies* summarizes this wealth of research and its practical implications. This book is divided into four sub-sections which discuss: marine fouling organisms and their impact, testing and development of antifouling coatings, developments in chemically-active marine antifouling technologies, and new surface approaches to the control of marine biofouling. It provides an authoritative overview of the recent advances in understanding the biology of fouling organisms, the latest developments

on antifouling screening techniques both in the field and in the laboratory, research on safer active compounds and the progress on nontoxic coatings with tailor-made surface properties. With its distinguished editors and international team of contributors, *Advances in marine antifouling coatings and technologies* is a standard reference for manufacturers of marine antifouling solutions, the shipping industry, oil and gas producers, aquaculture and other industries using offshore structures, and academics researching this important area. Assesses marine antifouling organisms and their impact, including a historical review and directions for future research Discusses developments in antifouling coatings examining chemically-active and new surface approaches Reviews the environmentally friendly alternative of safer active compounds and the progress of non-toxic compounds

Squandering Billions Gary Bannerman 2005 Squandering Billions is a brutally frank indictment of health spending. The book demonstrates that the absolute power of medical doctors, pharmaceutical companies, health bureaucrats, and hospital administrators enshrines mediocrity at the expense of patients. Mistakes, inefficiency, and malpractice in the Canadian health system may be causing ten times or more unnecessary deaths a year than the toll from traffic accidents (3,000) and crime (500). Some acute care hospitals seem to have become disease factories. Why do health care tragedies not face the scrutiny typically focused upon other accidental and wrongful deaths? Canadian medicare was designed to insure the patient, not the practitioner. Why, then, are medical doctors and hospitals exempted from competition? Evidence shows conclusively that expanded use of community health centres, nurse practitioners, doctors of chiropractic, and others can be more effective and less expensive within their area of expertise. This book goes where official commissions have been afraid to travel.

Transnational Legal Orders Terence C. Halliday 2015-01-19 "This book offers an empirically grounded theory that reframes the study of law and society from a predominantly national context, which dichotomizes the study of international law and national compliance into a dynamic perspective that places national, international, and transnational lawmaking and practice within a coherent single frame. By presenting and elaborating on a new concept, transnational legal orders it offers an original approach to the emergence of legal orders beyond nation-states. It shows how they originate, where they compete and cooperate, and how they settle on institutions that legally order fundamental economic and social behaviors that transcend national borders. This original theory is applied and developed by distinguished scholars from North America and Europe in business law, regulatory law and human rights"--
