FPGA Design Philip Simpson 2010-07-23 In August of 2006, an engineering VP from one of Altera's customers approached Misha Burich, VP of Engineering at Altera, asking for help in reliably being able to predict the cost, schedule and quality of system designs reliant on FPGA designs. At this time, I was responsible for defining the design flow requirements for the Altera design software and was tasked with investigating this further. As I worked with the customer to understand what worked and what did not work reliably in their FPGA design process, I noted that this problem was not unique to this one customer. The characteristics of the problem are shared by many Corporations that implement designs in FPGAs. The Corporation has many design teams at different locations and the success of the FPGA projects vary between the teams. There is a wide range of design experience across the teams. There is no working process for sharing design blocks between engineering teams. As I analyzed the data that I had received from hundreds of customer visits in the past, I noticed that design reuse among engineering teams was a challenge. I also noticed that many of the design teams at the same Companies and even within the same design team used different design methodologies. Altera had recently solved this problem as part of its own FPGA design software and IP development process.

Rachel Maddow Lisa Rogak 2020-01-07 The first biography of the most popular anchor in cable news. Rachel Maddow has beaten the odds in a way that's novel in today's America: she uses her brain. In a world of banal and opinionated soundbites, she regularly crushes Sean Hannity's ratings thanks to her deeply researched reports. And in our highly polarized world, Maddow amiably engages the staunchest conservatives, while never hesitating to expose their light-on-facts defenses. As a result, she's become the top anchor for MSNBC and a beloved representative for all that progressive America holds dear. The news that Maddow was the first publicly-out lesbian to anchor a prime-time TV news show seemed almost anticlimactic to her millions of viewers, who will be surprised and intrigued by little-known details of her life, as written by New York Times bestselling biographer Lisa Rogak. Growing up in a conservative California town – and viewing herself as a perennial outsider – helped spark an early interest in activism. After attending Stanford and Oxford, she opted for a minimum-wage job as a radio DJ in a tiny Massachusetts market while finishing her Ph.D. She planned to pursue a career as an activist, but 9/11 changed all that, so she returned to local radio where she could help listeners by "explaining stuff." A stint at Air America raised her national profile, which led to her groundbreaking MSNBC show where she dissects the news of the day with an approach found nowhere else on TV.
