Drive Daniel H. Pink 2011-04-05 The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of *When: The Scientific Secrets of Perfect Timing* Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That's a mistake, says Daniel H. Pink (author of *To Sell Is Human: The Surprising Truth About Motivating Others*). In this provocative and persuasive new book, he asserts that the secret to high performance and satisfaction—at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by ourselves and our world. Drawing on four decades of scientific research on human motivation, Pink exposes the mismatch between what science knows and what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live.

Motherload Ana Villalobos 2014-09-05 In a time of economic anxiety, fear of terrorism, and marital uncertainty, insecurity has become a big part of life for many American mothers. With bases of security far from guaranteed, mothers are often seeking something they can count on. In this beautifully written and accessible book, Ana Villalobos shows how mothers frequently rely on the one thing that seems sure to them: the mother-child relationship. Based on over one hundred interviews with and observations of mothers—single or married, but all experiencing varying forms of insecurity in their lives—Villalobos finds that mothers overwhelmingly expect the mothering relationship to "make it all better" for themselves and their children. But there is a price to pay for loading this single relationship with such high expectations. Using detailed case studies, Villalobos shows how women's Herculean attempts to create various kinds of security through mothering often backfire, thereby exhausting mothers, deflecting their focus from other possible sources of security, and creating more stress. That stress is further exacerbated by dominant ideals about "good" mothering—ideals that are fraught with societal pressures and expectations that reach well beyond what mothers can actually do for their children. Pointing to hopeful alternatives, Villalobos shows how more realistic expectations about motherhood lead remarkably to greater security in families by prompting mothers to cast broader security nets, making conditions less stressful and—just as significantly—bringing greater joy in mothering.

A Dream So Big Steve Peifer 2013-03-19 A Dream So Big is the story of Steve Peifer, a corporate

manager who once oversaw 9,000 computer software consultants, who today helps provide daily lunches for over 20,000 Kenyan school children in thirty-five national public schools, and maintains solar-powered computer labs at twenty rural African schools. Steve and his wife, Nancy, were enjoying a successful management career with one of America's high tech corporate giants during the dot-com boom of the 1990's when, in 1997, he and his wife Nancy discovered they were pregnant with their third child. Tragically, doctors said a chromosomal condition left their baby "incompatible with life." The Peifers only spent 8 days with baby Stephen before he died. Seeking to flee the pain, Steve and Nancy began a pilgrimage that thrust them into a third-world setting where daily life was often defined by tragedy—drought, disease, poverty, hunger, and death. They didn't arrive in the service of any divine calling, but the truth of their surroundings spoke to their troubled hearts. A short-term, 12-month mission assignment as dorm parents for a Kenyan boarding school turned this ordinary man into the most unlikely internationally recognized hero, and his story will inspire you to pursue similar lives of service.

It's Complicated Danah Boyd 2014-02-25 Surveys the online social habits of American teens and analyzes the role technology and social media plays in their lives, examining common misconceptions about such topics as identity, privacy, danger, and bullying.

The Third Industrial Revolution Jeremy Rifkin 2011-10-04 The Industrial Revolution, powered by oil and other fossil fuels, is spiraling into a dangerous endgame. The price of gas and food are climbing, unemployment remains high, the housing market has tanked, consumer and government debt is soaring, and the recovery is slowing. Facing the prospect of a second collapse of the global economy, humanity is desperate for a sustainable economic game plan to take us into the future. Here, Jeremy Rifkin explores how Internet technology and renewable energy are merging to create a powerful "Third Industrial Revolution." He asks us to imagine hundreds of millions of people producing their own green energy in their homes, offices, and factories, and sharing it with each other in an "energy internet," just like we now create and share information online. Rifkin describes how the five-pillars of the Third Industrial Revolution will create thousands of businesses, millions of jobs, and usher in a fundamental reordering of human relationships, from hierarchical to lateral power, that will impact the way we conduct commerce, govern society, educate our children, and engage in civic life. Rifkin's vision is already gaining traction in the international community. The European Union Parliament has issued a formal declaration calling for its implementation, and other nations in Asia, Africa, and the Americas, are quickly preparing their own initiatives for transitioning into the new economic paradigm. The Third Industrial Revolution is an insider's account of the next great economic era, including a look into the personalities and players — heads of state, global CEOs, social entrepreneurs, and NGOs — who are pioneering its implementation around the world.

Exploring the Solar System Peter Bond 2012-02-29 The exploration of our solar system is one of humanity's greatest scientific achievements. The last fifty years in particular have seen huge steps forward in our understanding of the planets, the sun, and other objects in the solar system. Whilst planetary science is now a mature discipline - involving geoscientists, astronomers, physicists, and others - many profound mysteries remain, and there is indeed still the tantalizing possibility that we may find evidence of life on another planet in our system. Drawing upon the latest results from the second golden age of Solar System exploration, author Peter Bond provides an authoritative and up-to-date account of the planets, satellites and smaller debris that orbit the Sun. Written in an informal style, with minimal use of mathematics, this book is the ideal introductory text for non-science students and other readers with little or no science background. With the aid of numerous illustrations, many in full colour, this exciting book brings to life the weird and wonderful worlds that populate our corner of the Universe. This book: Assumes no background in physics , astronomy or mathematics Carefully explains key concepts Gives

balanced coverage to areas of controversy or uncertainty in planetary science Is in in full color throughout and richly illustrated An interview with Peter can be found at <http://wisciblog.com/2012/02/28/exploring-the-solar-system/>

The River of Life Michael Marchand 2013-10-29 Sustainability defines the need for any society to live within the constraints of the land's capacity to deliver all natural resources the society consumes. This book compares the general differences between Native Americans and western world view towards resources. It will provide the 'nuts and bolts' of a sustainability portfolio designed by indigenous peoples. This book introduces the ideas on how to link nature and society to make sustainable choices. To be sustainable, nature and its endowment needs to be linked to human behavior similar to the practices of indigenous peoples. The main goal of this book is to facilitate thinking about how to change behavior and to integrate culture into thinking and decision-processes.

Reinventing Print David Jury 2018-07-12 With the rise of digital technology as a design tool and its acceptance as simply part of the tool chest for today's design studios, there has been a re-evaluation and return to exploring pre-digital typography. Design studios no longer flaunt their digital hardware, in fact quite the opposite. This attitudinal change toward digital technology has coincided with a growing fascination and re-evaluation of those pre-digital skills and processes that had been considered in recent years to be irrelevant. Mapping the rise of digital technology and examining the infinite possibilities it offers and the profound cultural and technical influence it has had in all aspects of visual communication. This text also focuses on our current post-digital age, in which the technology itself has become sufficiently common-place for us to fully recognize what it excels at and what it does less well. Reinventing Print focuses on those skills and processes which have been re-appropriated and irreverently liberated by a new generation of typographers, designers, and artists, raised with digital technology in their pockets and forever at their fingertips. In this post-digital age, traditional typographic craft is new, different and therefore exciting, potent and culturally subversive.

We the Media Dan Gillmor 2006-01-24 "We the Media, has become something of a bible for those who believe the online medium will change journalism for the better." -Financial Times Big Media has lost its monopoly on the news, thanks to the Internet. Now that it's possible to publish in real time to a worldwide audience, a new breed of grassroots journalists are taking the news into their own hands. Armed with laptops, cell phones, and digital cameras, these readers-turned-reporters are transforming

the news from a lecture into a conversation. In *We the Media*, nationally acclaimed newspaper columnist and blogger Dan Gillmor tells the story of this emerging phenomenon and sheds light on this deep shift in how we make--and consume--the news. Gillmor shows how anyone can produce the news, using personal blogs, Internet chat groups, email, and a host of other tools. He sends a wake-up call to newsmakers--politicians, business executives, celebrities--and the marketers and PR flacks who promote them. He explains how to successfully play by the rules of this new era and shift from "control" to "engagement." And he makes a strong case to his fellow journalists that, in the face of a plethora of Internet-fueled news vehicles, they must change or become irrelevant. Journalism in the 21st century will be fundamentally different from the Big Media oligarchy that prevails today. *We the Media* casts light on the future of journalism, and invites us all to be part of it. Dan Gillmor is founder of Grassroots Media Inc., a project aimed at enabling grassroots journalism and expanding its reach. The company's first launch is Bayosphere.com, a site "of, by, and for the San Francisco Bay Area." Dan Gillmor is the founder of the Center for Citizen Media, a project to enable and expand reach of grassroots media. From 1994-2004, Gillmor was a columnist at the San Jose Mercury News, Silicon Valley's daily newspaper, and wrote a weblog for SiliconValley.com. He joined the Mercury News after six years with the Detroit Free Press. Before that, he was with the Kansas City Times and several newspapers in Vermont. He has won or shared in several regional and national journalism awards. Before becoming a journalist he played music professionally for seven years.

Freaks, Geeks, and Cool Kids Murray Milner Jr. 2013-04-15 In this timely and insightful book, award-winning sociologist Murray Milner tries to understand why teenagers behave the way they do. Drawing upon two years of intensive fieldwork in one high school and 300 written interviews about high schools across the country, he argues that consumer culture has greatly impacted the way our youth relate to one another and understand themselves and society. He also suggests that the status systems in high schools are in and of themselves an important contributing factor to the creation and maintenance of consumer capitalism explaining the importance of designer jeans and designer drugs in an effort to be the coolest kid in the class.

Stand and Deliver Steve Lewis 2014-11-10 If Australian politics and public policy is a war of ideas, the National Press Club is the battleground. For the past half-century, the NPC has been the epicentre of political and social debate in Australia. Leaders and opinion-makers have used its stage to launch leadership bids, rattle the cage of public opinion with courageous and sometimes outrageous ideas, and make a stand. *Stand & Deliver* brings to life the NPC's rich and colourful history by presenting the best speeches of the past fifty years. It also lifts the lid on the protests and controversies experienced by this national institution. Featuring many of the giants of recent Australian and international history - including Bill Gates, the Dalai Lama, John Howard, Paul Keating, Julia Gillard, Barry Humphries, Germaine Greer and Bob Hawke - *Stand & Deliver* is an illuminating and entertaining journey through the last fifty years of public debate and discourse that have shaped our nation and the world.

Injury and Injustice Anne Bloom 2018-03-15 This book addresses some of the most difficult and important debates over injury and law now taking place in societies around the world. The essays tackle the inescapable experience of injury and its implications for social inequality in different cultural settings. Topics include the tension between physical and reputational injuries, the construction of human injuries versus injuries to non-human life, virtual injuries, the normalization and infliction of injuries on vulnerable victims, the question of reparations for slavery, and the paradoxical degradation of victims through legal actions meant to compensate them for their disabilities. Authors include social theorists, social scientists and legal scholars, and the subject matter extends to the Middle East and Asia, as well as North America.

Psychoanalysis Online Jill Savege Scharff 2018-04-17 *Psychoanalysis Online: Mental Health, Teletherapy and Training*, is an international collaboration by psychotherapists and psychoanalysts who consider the impact of virtual reality on our society and the uses of communications technology for analytic treatment and professional training. Having examined the impact of communications technology on mental health and relationships, the authors explore its use in analytical treatment conducted on the telephone and over the internet, and review its problems and possibilities. They provide a multi-faceted view of it, an ethical stance in relation to it, and evidence from which to judge its effectiveness. Looking into the future they imagine a time when technology-supported analytic treatment may be not only convenient as a supplement to in-person treatment but also preferable for some patients and therapists in various circumstances. *Psychoanalysis Online: Mental Health, Teletherapy and Training* invigorates the debate about technology and its responsible use in psychotherapy and psychoanalysis and in distance learning programs for mental health professionals.

Operations Forensics Richard Lai 2013-03-01 Powerful tools for using operations metrics to analyze companies in ways that go beyond traditional financial models and statements. Investors and analysts often need to look into a firm's operations more deeply than traditional financial statements and models allow. This book describes newly developed tools for using operations metrics to discern and influence the valuation of a firm. It is the first to present these techniques from a unified perspective: that of operations forensics, which looks at operations management not from the traditional point of view of a manager but from that of an investor or shareholder. After a discussion of financial statements and the useful but incomplete insights they provide, the book covers the three components of operations forensics: operational indicators, operations details that can predict future performance; operational due diligence, methods for verifying companies' claims about operational excellence and valuing their operational assets; and operational turnaround, an innovative approach to buyout and turnaround strategies. The text also offers brief reviews of operations management concepts, real-world examples of operations forensics, and a glossary. The mathematical material gradually increases in sophistication as the book progresses (but can be skipped without loss of continuity). Each chapter concludes with a "Takeaways and Toolkit" section, a brief summary of prior research, and suggestions for further reading. Operations forensics offers powerful tools and frameworks for financial analysts, private equity firms, managers, and consultants. This book provides a valuable resource for MBA students and practitioners. Downloadable supplementary material for instructors includes figures from the text and 42 slides that can be used for class presentations.

Using Technology with Classroom Instruction that Works Howard Pitler 2012 Technology is ubiquitous, and its potential to transform learning is immense. The first edition of Using Technology with Classroom Instruction That Works answered some vital questions about 21st century teaching and learning: What are the best ways to incorporate technology into the curriculum? What kinds of technology will best support particular learning tasks and objectives? How does a teacher ensure that technology use will enhance instruction rather than distract from it? This revised and updated second edition of that best-selling book provides fresh answers to these critical questions, taking into account the enormous technological advances that have occurred since the first edition was published, including

the proliferation of social networks, mobile devices, and web-based multimedia tools. It also builds on the up-to-date research and instructional planning framework featured in the new edition of *Classroom Instruction That Works*, outlining the most appropriate technology applications and resources for all nine categories of effective instructional strategies: * Setting objectives and providing feedback * Reinforcing effort and providing recognition * Cooperative learning * Cues, questions, and advance organizers * Nonlinguistic representations * Summarizing and note taking * Assigning homework and providing practice * Identifying similarities and differences * Generating and testing hypotheses Each strategy-focused chapter features examples--across grade levels and subject areas, and drawn from real-life lesson plans and projects--of teachers integrating relevant technology in the classroom in ways that are engaging and inspiring to students. The authors also recommend dozens of word processing applications, spreadsheet generators, educational games, data collection tools, and online resources that can help make lessons more fun, more challenging, and--most of all--more effective.
