Portfolio Construction, Measurement, and Efficiency John B. Guerard, Jr. 2016-09-23 This volume, inspired by and dedicated to the work of pioneering investment analyst, Jack Treynor, addresses the issues of portfolio risk and return and how investment portfolios are measured. In a career spanning over fifty years, the primary questions addressed by Jack Treynor were: Is there an observable risk-return trade-off? How can stock selection models be integrated with risk models to enhance client returns? Do managed portfolios earn positive, and statistically significant, excess returns and can mutual fund managers time the market? Since the publication of a pair of seminal Harvard Business Review articles in the mid-1960's, Jack Treynor has developed thinking that has greatly influenced security selection, portfolio construction and measurement, and market efficiency. Key publications addressed such topics as the Capital Asset Pricing Model and stock selection modeling and integration with risk models. Treynor also served as editor of the Financial Analysts Journal, through which he wrote many columns across a wide spectrum of topics. This volume showcases original essays by leading researchers and practitioners exploring the topics that have interested Treynor while applying the most current methodologies. Such topics include the origins of portfolio theory, market timing, and portfolio construction in equity markets. The result not only reinforces Treynor's lasting contributions to the field but suggests new areas for research and analysis.

Management of Construction Projects John E. Schaufelberger 2017-03-27 Unlike the majority of construction project management textbooks out there, Management of Construction Projects takes a distinctive approach by setting itself in the context of a single and real-world construction project throughout and also by looking at construction project management from the constructor's perspective. This project-based learning approach emphasizes the skills, knowledge, and techniques students require to become successful project managers. This second edition uses a brand new, larger, and more challenging case study to take students through key stages of the process, including: contracts and

subcontracting; estimating, scheduling, and planning; supply chain and materials management; cost control, quality, and safety; project leadership and ethics; and claims, disputes, and project close-outs. Also new to this edition is coverage of emergent industry trends such as LEAN, LEED, and BIM. The book contains essential features such as review questions, exercises, and chapter summaries, while example plans, schedules, contracts, and other documents are stored on a companion website. Written in straightforward language from a constructor's perspective, this textbook gives a realistic overview and review of the roles of project managers and everything they need to know in order to see a successful project through from start to finish.

Execution Larry Bossidy 2009-11-10 #1 NEW YORK TIMES BESTSELLER • More than two million copies in print! The premier resource for how to deliver results in an uncertain world, whether you're running an entire company or in your first management job. "A must-read for anyone who cares about business."—The New York Times When *Execution* was first published, it changed the way we did our jobs by focusing on the critical importance of "the discipline of execution": the ability to make the final leap to success by actually getting things done. Larry Bossidy and Ram Charan now reframe their empowering message for a world in which the old rules have been shattered, radical change is becoming routine, and the ability to execute is more important than ever. Now and for the foreseeable future: • Growth will be slower. But the company that executes well will have the confidence, speed, and resources to move fast as new opportunities emerge. • Competition will be fiercer, with companies searching for any possible advantage in every area from products and technologies to

location and management. • Governments will take on new roles in their national economies, some as partners to business, others imposing constraints. Companies that execute well will be more attractive to government entities as partners and suppliers and better prepared to adapt to a new wave of regulation. • Risk management will become a top priority for every leader. Execution gives you an edge in detecting new internal and external threats and in weathering crises that can never be fully predicted. Execution shows how to link together people, strategy, and operations, the three core processes of every business. Leading these processes is the real job of running a business, not formulating a "vision" and leaving the work of carrying it out to others. Bossidy and Charan show the importance of being deeply and passionately engaged in an organization and why robust dialogues about people, strategy, and operations result in a business based on intellectual honesty and realism. With paradigmatic case histories from the real world—including examples like the diverging paths taken by Jamie Dimon at JPMorgan Chase and Charles Prince at Citigroup—Execution provides the realistic and hard-nosed approach to business success that could come only from authors as accomplished and insightful as Bossidy and Charan.

As-built Schedule Comparison Between Urban and Rural Bridge Construction Projects

Jin Wook Chung 2004 This thesis describes the difference in duration between urban and rural bridge construction projects. It provides useful information for both contractors and organizations, such as Iowa DOT. This information allows the setting up of reasonable and reliable as-planned schedules for urban area bridge construction projects and facilities accurate budget estimates for those projects. This case study uses a comparison of urban and rural bridge construction projects in Urban and Rural areas. The urban bridge projects were part of the Interstate 235 reconstruction project and were completed between 2002 and 2003. The rural bridge construction projects were finished in 2001-2002, in three different Iowa counties: Jasper, Marshall, and Polk County. This thesis addresses several important findings, including the usefulness of the Iowa DOT Suggested Job Productivity for Bridgework, certain issues specific to urban bridge construction scheduling, possible causes of duration difference between urban and rural bridge construction projects, and others. Other material included in this thesis is as follows; fourteen as-built schedules of bridge construction projects, narrative for bridge beam setting and the cost for project delay/expedition, a custom designed manual for Gantt chart scheduling template based on MS-Excel developed for Iowa DOT, and an example of bridge construction scheduling titled: Scheduling of Pretensioned Prestressed Concrete Beam (PPCB) for the bridge construction project on 35th street over I-235 in West Des Moines, Iowa. Finally, the review of the duration difference between urban and rural bridge projects helps in understanding the characteristics of durations of urban and rural bridge projects and it is a direct comparison that is not available in textbooks or in other types of construction literature.

Project Scheduling and Management for Construction

David R. Pierce, Jr. 2013-09-30 First published in 1988 by RS Means, the new edition of Project Scheduling and Management for Construction has been substantially revised for students enrolled in construction management and civil engineering programs. While retaining its emphasis on developing practical, professional-level scheduling skills, the new edition is a relatable, real-world case study that can be used over the course of a semester. The book also includes classroom elements like exercises, quizzes, skill-building exercises, as well as an instructor's manual including two additional new cases.

Construction Delays Ted Trauner 2009-04-25 Delays in construction projects are frequently expensive, since there is usually a construction loan involved which charges interest, management staff dedicated to the project whose costs are time dependent, and ongoing inflation in wage and material prices. Many techniques are used to analyze delays. Some of these methods have inherent weaknesses and should be avoided. This book points out the shortcomings of these faulty methods and explains how a delay analysis should be performed. It then describes specifically how the analysis is done with CPM schedules. A explanation of delays and delay damages, presented in a straightforward, accessible manner, should be useful to public and private owners, construction managers, general contractors, subcontractors, designers, suppliers, and attorneys whose work involves them in the construction industry. The discussion will include subtleties of the process, such as shifts in the critical path, and non-critical delays. The subject of damages is covered in detail, including the major categories of extended field overhead and unabsorbed home office overhead. Likewise, the damages suffered by the owner, either actual or liquidated, are also explained. Finally, a chapter is devoted to managing the risk of delays and time extensions from the viewpoints of the various parties to a construction project. A discussion of early completion schedules and constructive acceleration is also included. In this new edition, all chapters are updated to reflect the changes in the construction field since the first edition published over 16 years ago. The Second Edition includes over 40% more information such as new methods for analyzing delays with examples of the proper approach. The author also includes a new chapter on risk management which focuses on the delay-related risks of the various parties in a construction project. Explains the different categories of delays Addresses the concept of concurrency and also non-critical delays Discusses the more common approaches used for measuring and analyzing delays and the strengths and weaknesses associated with them Prevention of Time-Related Delay Problems

Construction Site Planning and Logistical Operations Randy R. Rapp 2015-02-15 Organizing and administering a construction site so that the right resources get to the right place in a timely fashion demands strong leadership and a rigorous process. Good logistical operations are essential to profitability, and this book is the essential, muddy boots guide to efficient site management. Written by experienced educator-practitioners from the world-leading Building Construction Management program at Purdue University, this volume is the ultimate guide to the knowledge, skills, and abilities that need to be mastered by project superintendents. Observations about leadership imperatives and techniques are included. Organizationally, the book follows site-related activities from bidding to project closeout. Beyond outlining broad project managerial practices, the authors drill into operational issues such as temporary soils and drainage structures, common equipment, and logistics. The content is primarily geared for the manager of a domestic or small commercial building construction project, but includes some reference to public and international work, where techniques, practices, and decision making can be substantially different. The book is structured into five sections and fifteen chapters. This facilitates ready adaptation either to industry training seminars or to university courses: Section I. The Project and Site Pre-Planning: The Construction Project and Site Environment (Randy R. Rapp); Due Diligence (Robert Cox); Site Organization and Layout (James O'Connor). Section II. The Site and Field Engineering Issues: Building Layout (Douglas Keith); Soil and Drainage Issues (Yi Jiang and Randy R. Rapp). Section III. Site Logistics: Site Logistical Procedures and Administration (Daphene Koch); Earthmoving (Douglas Keith); Material Handling Equipment (Bryan Hubbard).

Section IV. Leadership and Control: Leadership and Communication (Bradley L.
