Models and Frameworks for Implementing Evidence-Based Practice Jo Rycroft-Malone 2011-09-07 The Evidence-Based Nursing Series is co-published with Sigma Theta Tau International (STTI). The series focuses on implementing evidence-based practice in nursing and mirrors the remit of Worldviews on Evidence-Based Nursing, encompassing clinical practice, administration, research and public policy. Models and Frameworks for Implementing Evidence- Based Practice: Linking Evidence to Action looks at ways of implementing evidence gained through research and factors that influence successful implementation. It acknowledges the gap that exists between obtaining evidence and the practicalities of putting it into practice and provides direction to help to close this gap. This, the first book in the series, helps the reader to make decisions about the appropriateness of using various models and frameworks. A selection of models and frameworks are examined in detail including examples of their use in practice. The book concludes with an analysis and synthesis of the included models and frameworks. The models and frameworks that have been included are based on a number of criteria: that they are internationally recognised, have undergone widespread evaluation and testing, are transferable across different settings, and can be used by different disciplines. Models and frameworks include: Stetler Model Ottawa Model of Research Use IOWA model of evidence-based practice Advancing Research and Clinical Practice through Close Collaboration (ARCC) model Dobbins' dissemination and use of research evidence for policy and practice framework Joanna Briggs Institute model Knowledge to Action framework Promoting Action on Research Implementation in Health Services (PARIHS) Key Points: Includes an overview of implementation issues and the use of theory and frameworks in implementing evidence into practice Chapters are written by the developers of the model or framework Each chapter provides background on an

implementation model or framework, suitable applications, underlying theory and examples of use Each chapter examines strengths and weaknesses of each model alongside barriers and facilitators for its implementation

The use of such interventions in healthcare has increased rapidly in recent years, partly due to the rise in technological gadgets/applications used in daily routines (e.g. actigraphy bracelets, smartphones) and their unique properties that can be utilized in assessing, monitoring and managing a patient's condition remotely. This book highlights the areas and the ways in which these interventions can facilitate patient assessment and monitoring and complement conventional treatments in the management of disease-induced or treatment-induced side effects. Furthermore, the book describes the development of such interventions and examines how they are designed to promote adherence and acceptance by the user. To this end, the book also discusses the need for personalizing the technological experience according to the user's preferences and needs. Drawing on the latest studies in these areas, it not only provides suggestions for undertaking research in this context, but also offers insights into how these technologies impact patients' clinical outcomes. Lastly, it addresses the challenges of utilizing such technologies and future directions. Providing multiple perspectives on the topic, the book appeals to a wide range of readers, including nurses, clinicians, researchers, technology experts and students, making them familiar with a broad selection of technological interventions and their application in clinical practice. Advancing the Science of Implementation Across the Cancer Continuum David A. Chambers 2018 While many effective interventions have been developed with the potential to significantly reduce morbidity and mortality from cancer, they are of no benefit to the health of populations if they cannot be delivered. In response to this challenge, Advancing the Science of Implementation across the Cancer Continuum provides an overview of research

that can improve the delivery of evidence-based interventions in cancer prevention, early detection, treatment, and survivorship. Chapters explore the field of implementation science and its application to practice, a broad synthesis of relevant research and case studies illustrating each cancer-focused topic area, and emerging issues at the intersection of research and practice in cancer. Both comprehensive and accessible, this book is an ideal resource for researchers, clinical and public health practitioners, medical and public health students, and health policymakers.

Leadership in Nursing: Experiences from the European Nordic Countries Thóra B. Hafsteinsdóttir
2019-04-30 This book explores the leading role played by nursing science in the European Nordic countries. Recognized leaders in nursing research from Denmark, Finland, Iceland, Norway and Sweden, reflect on the leadership of nurses, the societal developments and the state of nursing science in their country, and the successes and remaining challenges nurses are facing. The book highlights representative leadership projects focusing on e.g. evidenced-based clinical practice, education and research that have impacted patient and healthcare outcomes in each country. The book shows how nursing, as a scientific discipline, has been developing rapidly in these five Nordic countries. They have more nurses per capita than other countries (OECD 2016) and healthcare is provided to all citizens. Moreover, nursing qualification in the Nordic countries was based on university education early on, and there are more professors of nursing than in other countries. Accordingly, this book on Leadership in nursing within the Nordic countries shares essential and pioneering expertise that will benefit nurses and nurse scientists around the globe.
