This monograph has 35 chapters and opens with a discussion on the computing aspects of interactive video, focusing on the design and production of the software used to control the videodisc developed by the Open University in the UK. The next chapter illustrates a variety of case studies whereby local viewdata has been exploited by both teachers and their pupils in different parts of Europe. Attention then turns to the use of computer-assisted communication in the education of the visually impaired; the use of microcomputers in teaching electronics; and theoretical considerations in selecting software for language arts. This text will be of interest to educators and policymakers who want to implement computer technology in the classroom.
