Clustering-Based Support for Software Architecture Restructuring Niels Streekmann 2011-12-17 The maintenance of long-living software systems is an essential topic in today's software engineering practice and research. Software Architecture Restructuring is an important task to adjust these systems to current requirements and to keep them maintainable. Niels Streekmann introduces an approach to Software Architecture Restructuring that semi-automates this task by introducing graph clustering. The approach provides an iterative process that systematically incorporates human architectural knowledge for the improvement of the restructuring result. Thus, it supports the task of planning the transfer of an existing system to a target architecture and aims at reducing the required manual effort.

Going to the Mountain Ndaba Mandela 2018-06-26 The first-ever book to tell Nelson Mandela's life through the eyes of the grandson who was raised by him, chronicling Ndaba Mandela's life living with, and learning from, one of the greatest leaders and humanitarians the world has ever known. To the rest of the

world, Nelson Mandela was a giant: an anti-apartheid revolutionary, a world-renowned humanitarian, and South Africa's first black president. To Ndaba Mandela, he was simply "Granddad." In *Going to the Mountain*, Ndaba tells how he came to live with Mandela shortly after he turned eleven--having met each other only once, years before, when Mandela was imprisoned at Victor Verster Prison--and how the two of them slowly, cautiously built a relationship that would affect both their lives in extraordinary ways. It wasn't an easy transition. Mandela had high expectations for those around him, especially his family, and Ndaba chafed at the strict rules and exacting guidelines in his grandfather's home. But at the same time--through overheard calls from foreign dignitaries as well as the Xhosa folk wisdom that his grandfather shared with him at every opportunity--Ndaba was learning how to be a man. On a scale both personal and epic, Ndaba's extraordinary journey mirrors that of South Africa's coming of age--from the segregated Soweto ghettos into which he was born to the privileged life in which he grew up and the turbulent yet exciting times in which he carries on his grandfather's legacy. *Going to the Mountain* is, in the end, a story about unlocking the power within each of us. It's a cautionary tale about how a child's life can go one way or the other, depending upon the intervention of a caring soul--and about the awesome power of love to serve as a catalyst for change.

Collaborative Design for Embedded Systems John Fitzgerald 2014-04-23 One of the most significant challenges in the development of embedded and cyber-physical systems is the gap between the disciplines of software and control engineering. In a marketplace, where rapid innovation is essential, engineers from both

disciplines need to be able to explore system designs collaboratively, allocating responsibilities to software and physical elements, and analyzing trade-offs between them. To this end, this book presents a framework that allows the very different kinds of design models – discrete-event (DE) models of software and continuous time (CT) models of the physical environment – to be analyzed and simulated jointly, based on common scenarios. The individual chapters provide introductions to both sides of this co-simulation technology, and give a step-by-step guide to the methodology for designing and analyzing co-models. They are grouped into three parts: Part I introduces the technical basis for collaborative modeling and simulation with the Crescendo technology. Part II continues with different methodological guidelines for creating co-models and analyzing them in different ways using case studies. Part III then delves into more advanced topics and looks into the potential future of this technology in the area of cyber-physical systems. Finally various appendices provide summaries of the VDM and 20-sim technologies, a number of valuable design patterns applicable for co-models, and an acronym list along with indices and references to other literature. By combining descriptions of the underlying theory with records of real engineers' experience in using the framework on a series of case studies the book appeals to scientists and practitioners alike. It is complemented by tools, examples, videos, and other material on www.crescendotool.org. Scientists/researchers and graduate students working in embedded and cyber-physical systems will learn the semantic foundations for collaborative modeling and simulation, as well as the current capabilities and limitations of methods and tools in this field. Practitioners will be able to develop an appreciation of the capabilities of the co-modeling techniques, to assess the benefits of more collaborative approaches to modeling and simulation, and will benefit from the included guidelines and modeling patterns.

Graphical User Interface Prototyping for Distributed Requirements Engineering Sven Scheibmayr 2014-05-05 Finding and understanding the right requirements is essential for every software project. This book deals with the challenge to improve requirements engineering in distributed software projects. The use of graphical user interface (GUI) prototypes can help stakeholders in such projects to elicit and specify high quality requirements. The research objective of this study is to develop a method and a software artifact to support the activities in the early requirements engineering phase in order to overcome some of the difficulties and improve the quality of the requirements, which should eventually lead to better software products. Therefore, this study seeks to support the work with these prototypes in distributed projects. It is based on a theoretical analysis and follows a design science research approach.

SynDEVS Co-Design Flow H. Gregor Molter 2012-10-21 The complexity of modern embedded systems has increased rapidly in the recent past. Introducing models of computation into the design flow has significantly raised the abstraction in system level design of embedded systems. Establishing such high abstraction levels in common hardware /software co-design flows is still in its infancy. H. Gregor Molter develops a hardware / software co-design flow based on the Discrete Event System Specification model of computation. He advocates that such a system level design flow should exploit a timed model of computation to allow a broad application field. The presented design flow will transform timed DEVS models to both synthesizable VHDL source code and embeddable C++ source code.

My Life on a Plate Kelis 2015-09-28 My Life on a Plate tells Kelis' personal story through the food she creates. Her style has been molded by her culture, her travels, and all the people she met along the way. This book is a collection of her favorite recipes. Kelis' love affair with food started as a child. A native New Yorker, her mother worked as a chef in her own catering business, run out of their home in Harlem. Driven by the speed and the intensity in the kitchen, Kelis' passion behind watching her mother cook inspired her to roll up her sleeves. Every detail was clear and defined: Red lips, red nails, perfume, earrings and a military demeanour she felt in the presence of a master while watching her mother work. At age 17, Kelis signed her first recording contract and began to travel the world. She discovered local outdoor markets and tiny hole-in-the-wall restaurants and considered them the hidden treasures of her journeys. After 10 years in the music business, Kelis decided to attend Le Cordon Bleu. Attending the famous cooking school gave Kelis the confidence to call herself a chef and to write her first cookbook. My Life on a Plate tells Kelis' personal story through the food she creates. Her style has been moulded by her culture, her travels, and all the people she met along the way. This book is a collection of her favourite recipes. It features a mix of foods from her Puerto Rican heritage, such as Pernil (Puerto Rican Pork Shoulder), Arroz con Gandules, and Shrimp Alcapurias

along with dishes she created after discovering them on her travels around the world such as Malay Curry Chicken and Swedish Meatballs.
