Indigenous and Decolonizing Studies in Education Linda Tuhiwai Smith 2018-06-14 Indigenous and decolonizing perspectives on education have long persisted alongside colonial models of education, yet too often have been subsumed within the fields of multiculturalism, critical race theory, and progressive education. Timely and compelling, *Indigenous and Decolonizing Studies in Education* features research, theory, and dynamic foundational readings for educators and educational researchers who are looking for possibilities beyond the limits of liberal democratic schooling. Featuring original chapters by authors at the forefront of theorizing, practice, research, and activism, this volume helps define and imagine the exciting interstices between Indigenous and decolonizing studies and education. Each chapter forwards Indigenous principles - such as Land as literacy and water as life - that are grounded in place-specific efforts of creating Indigenous universities and schools, community organizing and social movements, trans and Two Spirit practices, refusals of state policies, and land-based and water-based pedagogies.

Introduction to the Theory of Programming Languages Gilles Dowek 2010-12-09 The design and implementation of programming languages, from Fortran and Cobol to Caml and Java, has been one of the key developments in the management of ever more complex computerized systems. Introduction to

the Theory of Programming Languages gives the reader the means to discover the tools to think, design, and implement these languages. It proposes a unified vision of the different formalisms that permit definition of a programming language: small steps operational semantics, big steps operational semantics, and denotational semantics, emphasising that all seek to define a relation between three objects: a program, an input value, and an output value. These formalisms are illustrated by presenting the semantics of some typical features of programming languages: functions, recursivity, assignments, records, objects, ... showing that the study of programming languages does not consist of studying languages one after another, but is organized around the features that are present in these various languages. The study of these features leads to the development of evaluators, interpreters and compilers, and also type inference algorithms, for small languages.

Fluency in Native and Nonnative English Speech Sandra Götz 2013 This book takes a new and holistic approach to fluency in English speech and differentiates between productive, perceptive, and nonverbal fluency. The in-depth corpus-based description of productive fluency points out major differences of how fluency is established in native and nonnative speech. It also reveals areas in which even highly advanced learners of English still deviate strongly from the native target norm and in which they have already approximated to it. Based on these findings, selected learners are subjected to native speakers' ratings of seven perceptive fluency variables in order to test which variables are most responsible for a perception of oral proficiency on the sides of the listeners. Finally, language-pedagogical implications derived from these findings for the improvement of fluency in learner language are presented. This book is conceptually and methodologically relevant for corpus-linguistics, learner corpus research and foreign language teaching and learning.

School Knowledge for the Masses John W. Meyer 2017-04-28 First published in 1992, this book presents unique quantitative data on the content coverage of primary education in a large number of countries since 1920. It demonstrates that these curricular outlines tend to be surprisingly similar across very disparate countries, and suggests the world processes that produced this result. Specifically, the study shows that the contemporary primary curriculum dates from changes in the late nineteenth century; that there has been a general shift towards a 'social studies' subject; that instruction in mathematics and sciences has tended to expand; that there have been substantial increases in foreign language instruction (and changes in the languages taught); and that instruction in the arts and physical education come to the standard world education model much later than other subjects. This work will be of particular interest to those studying primary curriculum, international education and the sociology of education.

Jacques Ellul and the Technological Society in the 21st Century Helena M. Jerónimo 2013-07-08 This volume rethinks the work of Jacques Ellul (1912-1994) on the centenary of his birth, by presenting an overview of the current debates based on Ellul's insights. As one of the most significant twentieth-century thinkers about technology, Ellul was among the first thinkers to realize the importance of topics such as globalization, terrorism, communication technologies and ecology, and study them from a technological perspective. The book is divided into three sections. The first discusses Ellul's diagnosis of modern society, and addresses the reception of his work on the technological society, the notion of efficiency, the process of symbolization/de-symbolization, and ecology. The second analyzes communicational and cultural problems, as well as threats and trends in early twenty-first century societies. Many of the issues Ellul saw as crucial – such as energy, propaganda, applied life sciences and communication – continue to be so. In fact they have grown exponentially, on a global scale, producing new forms of risk. Essays in the final section examine the duality of reason and revelation. They pursue an understanding of Ellul in terms of the depth of experience and the traditions of human knowledge, which is to say, on the one hand, the experience of the human being as contained in the rationalist, sociological and philosophical traditions. On the other hand there are the transcendent roots of human existence, as well as “revealed knowledge,” in the mystical and religious traditions. The meeting of these two traditions enables us to look

at Ellul's work as a whole, but above all it opens up a space for examining religious life in the technological society.

Mudwoman Joyce Carol Oates 2012-03-20 “Oates is just a fearless writer...with her brave heart and her impossibly lush and dead-on imaginative powers.” –Los Angeles Times “[An] extraordinarily intense, racking, and resonant novel.” –Booklist (starred review) One of the most acclaimed writers in the world today, the inimitable Joyce Carol Oates follows up her searing, New York Times bestselling memoir, *A Widow’s Story*, with an extraordinary new work of fiction. *Mudwoman* is a riveting psychological thriller, taut with dark suspense, that explores the high price of repression in the life of a respected university president teetering on the precipice of a nervous breakdown. Like Daphne DuMaurier’s gothic masterwork, *Rebecca*, and the classic ghost story, *The Turn of the Screw*, by Henry James, Oates’s *Mudwoman* is a chilling page-turner that hinges on the power of the imagination and the blurry lines between the real and the invented—and it stands tall among the author’s most powerful and beloved works, including *The Falls*, *The Gravedigger’s Daughter*, and *We Were the Mulvaney*s.

Decolonizing Education Marie Battiste 2019-01-31 Drawing on treaties, international law, the work of other Indigenous scholars, and especially personal experiences, Marie Battiste documents the nature of Eurocentric models of education, and their devastating impacts on Indigenous knowledge. Chronicling the negative consequences of forced assimilation, racism inherent to colonial systems of education, and the failure of current educational policies for Aboriginal populations, Battiste proposes a new model of education, arguing the preservation of Aboriginal knowledge is an Aboriginal right. Central to this process is the repositioning of Indigenous humanities, sciences, and languages as vital fields of knowledge, revitalizing a knowledge system which incorporates both Indigenous and Eurocentric thinking.

Classroom Testing John Brian Heaton 1990 The Longman Keys to Language Teaching series is intended especially for ordinary teachers. The books in the "Keys" series offer realistic, practical, down-to-earth advice on useful techniques and approaches in the modern ELT classroom. Most of the activities suggested in these books can be adapted and used for almost any class, by any teacher. One of the subjects of most concern to all teachers is classroom testing. For what reasons should we do it? How should we do it? How often should we do it? How should we organise it? Can it be harmful? What is the relationship between teaching and testing? These are just some of the questions that Brian Heaton addresses in this book. With a minimum of jargon, a number of fundamental concepts are treated in an accessible manner. As well as a discussion of these important issues, the author includes a great many examples of tests that teachers can adapt and use in their own classrooms. In addition, he gives advice on the role of continuous assessment, in which there has been an increasing amount of interest in recent years. The book also contains some suggestions on oral testing - including how to cope with this in large classes.
