**Closing the Asylums** George Paulson, M.D. 2014-01-10 One of the most significant medical and social initiatives of the twentieth century was the demolition of the traditional state hospitals that housed most of the mentally ill, and the placement of the patients out into the community. The causes of this deinstitutionalization included both idealism and legal pressures, newly effective medications, the establishment of nursing and group homes, the woeful inadequacy of the aging giant hospitals, and an attitudinal change that emphasized environmental and social factors, not organic ones, as primarily responsible for mental illness. Though closing the asylums promised more freedom for many, encouraged community acceptance and enhanced outpatient opportunities, there were unintended consequences: increased homelessness, significant prison incarcerations of the mentally ill, inadequate community support or governmental funding. This book is written from the point of view of an academic neurologist who has served 60 years as an employee or consultant in typical state mental institutions in North Carolina and Ohio.

**Collaborative capacity development to complement stroke rehabilitation in Africa** Quinette Louw 2020-12-31 This scholarly book focuses on stroke in Africa. Stroke is a leading cause of disability among adults of all ages, contributing significantly to health care costs related to long term implications, particularly if rehabilitation is sub-optimal. Given the burden of stroke in Africa, there is a need for a book that focuses on functioning African stroke survivors and the implications for rehabilitation within the African

context. In addition, there is a need to progress with contextualised, person-centred, evidence-based guidance for the rehabilitation of people with stroke in Africa, thereby enabling them to lead socially and economically meaningful lives. The research incorporated in the book used a range of primary and secondary methodological approaches (scoping reviews, systematic reviews, meta-analyses, descriptive studies, surveys, health economics, and clinical practice guideline methodology) to shed new insights into African-centred issues and strategies to optimise function post-stroke.

The book is divided into distinguished sections: from physiology to pathophysiology; clinical assessment and measurements; and clinical practice achievements including techniques, the basic goals in clinical practice as well as the more appropriate hemodynamic therapy to be applied in different conditions. All chapters use a learning-oriented style, with practical examples, key points and take home messages, helping readers quickly absorb the content and, at the same time, apply what they have learned in the clinical setting. Examples assist students in interpreting and applying statistical data. The authors integrate timely topics (major challenges to nursing practice in the community, community and public health nursing specialties, cultural diversity, health disparities, globalism, epidemiology and basic biostatistics, and ethical considerations, Preventative immunizations, political proactiveness, advanced practice preparation, sustainable health goals, ebola, telehealth, opioid epidemic, veterans and LBGQ as a underserved populations, iPrepare, health literacy, health promotion conferences, and Healthy People 2020.) *Alberta* John Church 2022-03-01 Alberta: A Health System Profile provides the first detailed description of Alberta's health care system and the underpinning political and social forces that have shaped it. Drawing on significant wealth from government revenues generated through the energy sector, Alberta has been able to develop an extensive public health and health care infrastructure. Alberta has used its financial resources to attract health professionals by offering the highest levels of financial compensation in

Canada. However, although it spends more per capita than other Canadian jurisdictions, Alberta's health care system costs and health outcomes are mediocre compared to those of many other Canadian jurisdictions. This unexpected outcome is the consequence of the unique interplay of economic and political forces within Alberta's political economy. Through an examination of Alberta's political and economic history, and using research on the structures and services provided, Alberta: A Health Systems Profile provides a detailed description of the programs and services that constitute Alberta's health care system.

**Forecasting Informatics Competencies for Nurses in the Future of Connected Health J. Murphy 2017-01-26**

Nursing informatics has a long history of focusing on information management and nurses have a long history of describing their computer use. However, based on the technical advances and through the ongoing and consistent changes in healthcare today, we are now challenged to look to the future and help determine what nurses and patients/consumers will need going forward. This book presents the proceedings of the Post Conference to the 13th International Conference on Nursing Informatics, held in Geneva, Switzerland, in June 2016. The theme of the Post Conference is Forecasting Informatics Competencies for Nurses in the Future of Connected Health. This book includes 25 chapters written as part of the Post Conference; a result of the collaboration among nursing informatics experts from research, education and practice settings, from 18 countries, and from varying levels of expertise – those beginning to forge new frontiers in connected health and those who helped form the discipline. The book content will help forecast and define the informatics competencies for nurses in practice, and as such, it will also help outline the requirements for informatics training in nursing programs around the world. The content will aid in shaping the nursing practice that will exist in our future of connected health, when practice and technology will be inextricably intertwined.

**Making Medicines Affordable** National Academies of Sciences, Engineering, and Medicine 2018-03-01 Thanks to remarkable advances in modern health care attributable to science, engineering, and medicine, it is now possible to cure or manage illnesses that were long deemed untreatable. At the same time, however, the United States is facing the vexing challenge of a seemingly uncontrolled rise in the cost of health care. Total medical expenditures are rapidly approaching 20 percent of the gross domestic product and are crowding out other priorities of national importance. The use of increasingly expensive prescription drugs is a significant part of this problem, making the cost of biopharmaceuticals a serious national concern with broad political implications. Especially with the highly visible and very large price increases for prescription drugs that have occurred in recent years, finding a way to make prescription

medicines and health care at large more affordable for everyone has become a socioeconomic imperative. Affordability is a complex function of factors, including not just the prices of the drugs themselves, but also the details of an individual's insurance coverage and the number of medical conditions that an individual or family confronts. Therefore, any solution to the affordability issue will require considering all of these factors together. The current high and increasing costs of prescription drugs coupled with the broader trends in overall health care costs is unsustainable to society as a whole. Making Medicines Affordable examines patient access to affordable and effective therapies, with emphasis on drug pricing, inflation in the cost of drugs, and insurance design. This report explores structural and policy factors influencing drug pricing, drug access programs, the emerging role of comparative effectiveness assessments in payment policies, changing finances of medical practice with regard to drug costs and reimbursement, and measures to prevent drug shortages and foster continued innovation in drug development. It makes recommendations for policy actions that could address drug price trends, improve patient access to affordable and effective treatments, and encourage innovations that address significant needs in health care.

*Implementing High-Quality Primary Care* National Academies of Sciences, Engineering, and Medicine 2021-06-30 High-quality primary care is the foundation of the health care system. It provides continuous, person-centered, relationship-based care that considers the needs and preferences of individuals, families, and communities. Without access to high-quality primary care, minor health problems can spiral into chronic disease, chronic disease management becomes difficult and uncoordinated, visits to emergency departments increase, preventive care lags, and health care spending soars to unsustainable levels. Unequal access to primary care remains a concern, and the COVID-19 pandemic amplified pervasive

economic, mental health, and social health disparities that ubiquitous, high-quality primary care might have reduced. Primary care is the only health care component where an increased supply is associated with better population health and more equitable outcomes. For this reason, primary care is a common good, which makes the strength and quality of the country's primary care services a public concern.

Implementing High-Quality Primary Care: Rebuilding the Foundation of Health Care puts forth an evidence-based plan with actionable objectives and recommendations for implementing high-quality primary care in the United States. The implementation plan of this report balances national needs for scalable solutions while allowing for adaptations to meet local needs.

**Graduate Medical Education That Meets the Nation's Health Needs** Committee on the Governance and Financing of Graduate Medical Education 2014-09-30 Today's physician education system produces trained doctors with strong scientific underpinnings in biological and physical sciences as well as supervised practical experience in delivering care. Significant financial public support underlies the graduate-level training of the nation's physicians. Two federal programs--Medicare and Medicaid--distribute billions each year to support teaching hospitals and other training sites that provide graduate medical education. *Graduate Medical Education That Meets the Nation's Health Needs* is an independent review of the goals, governance, and financing of the graduate medical education system. This report focuses on the extent to which the current system supports or creates barriers to producing a physician workforce ready to provide high-quality, patient-centered, and affordable health care and identifies opportunities to maximize the leverage of federal funding toward these goals. *Graduate Medical Education* examines the residency pipeline, geographic distribution of generalist and specialist clinicians, types of training sites, and roles of teaching and academic health centers. The recommendations of *Graduate Medical Education* will contribute to the production of a better prepared physician workforce, innovative graduate medical education programs, transparency and accountability in programs, and stronger planning and oversight of the use of public funds to support training. Teaching hospitals, funders, policy makers, institutions, and health care organizations will use this report as a resource to assess and improve the graduate medical education system in the United States.
