*Residential Self-selection and Travel* Wendy Bohte 2010 "Most Western national governments aim to influence individual travel patterns - at least to some degree - through the spatial planning of residential areas. Nevertheless, the extent to which the characteristics of the built environment influence travel behaviour remains the subject of debate among travel behaviour researchers. This work addresses the role of residential-self-selection, an important issue within this debate. Households may not only adjust their travel behaviour to the built environment where they live, but they may also choose a residential location that corresponds to their travel-related attitudes. The empirical analysis in this thesis is based on data collected through an internet survey and a GPS-based survey, both of which were conducted among homeowners in three centrally located municipalities in the Netherlands. The study showed that residential self-selection has some limited effect on the relationship between distances to activity locations and travel mode use and daily kilometres travelled. The results also indicate that the inclusion of attitudes can help to detecting residential self-selection, provided that studies comply with several preconditions, such as the inclusion of the 'reversed' influence of behaviour on attitudes." -- BACK COVER.

Strategic Investment Han T. J. Smit 2012-01-12 Corporate finance and corporate strategy have long been seen as different sides of the same coin. Though both focus on the same broad problem, investment decision-making, the gap between the two sides--and between theory and practice--remains embarrassingly large. This book synthesizes cutting-edge developments in corporate finance and related fields--in particular, real options and game theory--to help bridge this gap. In clear, straightforward exposition and through numerous examples and applications from various industries, Han Smit and Lenos Trigeorgis set forth an extended valuation framework for competitive strategies. The book follows a problem-solving approach that synthesizes ideas from game theory, real options, and strategy. Thinking in terms of options-games can help managers address questions such as: When is it best to invest early to preempt competitive entry, and when to wait? Should a firm compete in R&D or adopt an accommodating stance? How does one value growth options or infrastructure investments? The authors provide a wide range of valuation examples, such as acquisition strategies, R&D investment in high-tech sectors, joint research ventures, product introductions in consumer electronics, infrastructure, and oil exploration investment. Representing a major step beyond standard real options or strategy analysis, and extending the power of real options and strategic thinking in a rigorous fashion, Strategic Investment

will be an indispensable guide and resource for corporate managers, MBA students, and academics alike.

*Syntactic Atlas of the Dutch Dialects* Sjeff Barbiers 2005 The Syntactic Atlas of the Dutch Dialects (SAND) provides a detailed overview of the surprisingly rich syntactic variation found in 267 dialects of Dutch at the beginning of the 21st century. More than 200 full color maps show the geographic distribution of over 100 syntactic variables. Many of these variables involve phenomena that are absent from the standard language and thus of great descriptive and theoretical importance. A state-of-the-art linguistic description and commentary accompanies each map, taking into account the results of modern syntactic research as well as historical developments. Volume I (2005) shows the variation in complementisers and complementiser agreement, subject pronouns, subject doubling and subject cliticisation after yes/ no, reflexives and reciprocals, relative clauses, question-word doubling and topicalisation. Volume II shows the variation in two- and three verb clusters, interruption of the verb clusters, extraposition and the 'to' in the verbal clusters, auxiliary selection, do-insertion, and negation and quantification.

**150 ECG Problems E-Book** John Hampton 2013-07-24 This book offers 150 12-lead ECGs and rhythm strips, each with a clinical case history and question. The full ECG is reproduced and a study of it with the case history should be enough to give an answer. On the back the case is examined, with a description of the main features of the ECG along with a clinical interpretation and a "what to do" section. The cases are graded in difficulty. The unique page size allows presentation of all 12-lead ECGs across a single page for clarity. Several of the cases incorporate chest X-rays and coronary angiograms illustrating the appearances that are associated with various cardiac conditions. All the cases are graded in difficulty and are cross-referenced to the new editions of ECG Made Easy and ECG in Practice for further information. For this Fourth Edition over 30 new ECGs have been included, mainly to provide clearer examples, though the book deliberately retains some technically poor records to maintain a 'real-world' perspective.

*Anticipating Criminal Behaviour* Peter A. M. G. de Kock 2014-09-10 In the first decade of this century, the focus of law-enforcement agencies has shifted from prosecuting crime to anticipating crime. This approach emphasizes the discovery of narratives in crime-related data. However, while narratives are at the mainstay of entertainment, law, and politics, a scientific method by which narratives can be created - and subsequently be used to anticipate criminal behavior - still has to be established. In the creative industry, a narrative is generated by a scenario. A scenario describes the interactions between the characters and includes information - about behavior, goals, motivations, modi operandi, and resistances - that have to be overcome. Furthermore, a creative scenario is composed by a limited number of scenario components. In this book, a new and innovative scenario model is designed by which narratives in data can be detected. It introduces the ESC12 - the twelve Elementary Scenario Components - by which every conceivable narrative can be created. Moreover, the book introduces the ESC12 scenario model, a model that may support law enforcement agencies to effectively anticipate criminal behavior. The book's author, Peter A.M.G. de Kock, graduated as a filmmaker from the Film Academy of the Amsterdam School of the Arts in 1994, and has traveled all over the world as a professional photographer, cameraman, and film-director. In 2009, after receiving a Master degree in Criminal Investigation, he introduced creative scenarios to anticipate (terrorist) attacks. The operational results of his team were thought provoking, and he was invited to demonstrate his method of operation to prominent members of Dutch Parliament and the Ministry of Security and Justice. He was then offered the opportunity to pursue the use of scenarios to anticipate crime, as an external Ph.D. student at Tilburg University. This book is the result of his study. **Discontinuous Innovation** Peter AugsdÄ¶rfer 2013-08-28 This book is based on the findings, issues and questions related to an ongoing decade-old research project named the Innovation Lab ([www.innovation-lab.org](http://www.innovation-lab.org)). The research project focuses on discontinuous innovation in more than thirteen countries, most of which are European, and provides useful insights into its different challenges. It also raises several questions related to the subject, some of which are: how do firms pick up weak signals on emerging — and possibly radically different — innovation? What should firms do when these weak signals hit their “mainstream” process? What are the criteria for allocating resources to a strategic innovation project? What actions should firms take to avoid being left out by the “corporate immune system”? How should firms organize projects that often break existing rules and require new rules to be created? This book attempts to provide answers to the above mentioned questions by gathering information from the research project and also from firms that have tried exploring various ideas, models and insights to tackle discontinuous innovation. Written in a simple and accessible manner, this book will be of interest to both practitioners and academics alike.
