Spoils of War Hannah Walker 2017-06-11 Jecks Cordant, High General of the Kabarian army was used to life being a certain way. Jecks knew things didn't tend to change when you were at the top of your career. He

was wrong. In one moment, because of one small letter, his entire world tilted. Everything was different. Being forced into a marriage he didn't want, with a prince he had nothing in common with, Jecks watched his life crumble around him. Yet, he could do nothing other than go along with the plans for the sake of peace and the thousands of lives at risk in both empires. Calling on the support of his friends, he makes the journey to meet his fiancée. Along the way, he meets a man he never expected to find— one he could fall in love with. Battling the enemies intent on stopping the peace deal from going ahead, and his own heart, Jecks steels himself for what the future holds— a life of loneliness and regrets. Forced to confront feelings he can't afford to explore, and fighting to bring peace to both lands, Jecks will stand together with his men and fight for what is right, even if it's sacrificing his own feelings. His duty to Kabaria is more important than the love of a man. With enemies out to stop them, and danger meeting them around every corner, Jecks must learn to trust while ignoring the growing emotions he shouldn't feel. With their goal in sight, Jecks knows he must honor the duty given him, but once he arrives at the castle, he finds his problems have only begun.

Lee Konitz Andy Hamilton 2007-08-08 “Meticulously researched, detailed and documented, this long awaited overview justly establishes Konitz as one of the most consistently brilliant, adventurous and original improvisers in the jazz tradition—a genius as rare as Bird himself.” —John Zorn “Hamilton’s work may well mark the inception of a format new to writing on Western music, one which avoids both the self-aggrandizing of autobiography and the stylized subjectification of biography.” —The Wire “An extraordinary approach to a biography, with the man himself speaking for extended sessions. The main vibration I felt from Lee’s words was total honesty, almost to a fault. Konitz shows himself to be an acute observer of the scene, full of wisdom and deep musical insights, relevant to any historical period regardless of style. The asides by noted musicians are beautifully woven throughout the pages. I couldn’t put the book down—it is the definition of a living history.” —David Liebman The preeminent altoist associated with the “cool” school of jazz, Lee Konitz was one of the few saxophonists of his generation to forge a unique sound independent of the influence of Charlie Parker. In the late 1940s, Konitz began his career with the Claude Thornhill band, during which time he came into contact with Miles Davis, with whom he would later work on the legendary Birth of the Cool sessions. Konitz is perhaps best known through his association with Lennie Tristano, under whose influence much of his sound evolved, and for his work with Stan Kenton and Warne Marsh. His recordings have ranged from cool bop to experimental improvisation and have appeared on such labels as Prestige, Atlantic, Verve, and Polydor. Crafted out of numerous interviews between the author and his subject, the book offers a unique look at the story of Lee Konitz’s life and music, detailing Konitz’s own insights into his musical education and his experiences with such figures as Miles Davis, Stan Kenton, Warne Marsh, Lennie Tristano, Charles Mingus, Bud Powell, and Bill Evans. Andy Hamilton is a jazz pianist and contributor to major jazz and contemporary music magazines. He teaches philosophy, and the history and aesthetics of jazz, at Durham University in the United Kingdom. He is also the author of the book *Aesthetics and Music* (Continuum 2007). Joe Lovano is a Grammy Award–winning tenor saxophonist. His most recent album is *Streams of Expression*.

Thinking Security Steven M. Bellovin 2015-12-03 If you're a security or network professional, you already know the "do's and don'ts": run AV software and firewalls, lock down your systems, use encryption, watch network traffic, follow best practices, hire expensive consultants . . . but it isn't working. You're at greater risk than ever, and even the world's most security-focused organizations are being victimized by massive attacks. In *Thinking Security*, author Steven M. Bellovin provides a new way to think about security. As one of the world's most respected security experts, Bellovin helps you gain new clarity about what you're doing and why you're doing it. He helps you understand security as a systems problem, including the role of the all-important human element, and shows you how to match your countermeasures to actual threats. You'll learn how to move beyond last year's checklists at a time when technology is changing so rapidly. You'll also understand how to design security architectures that don't just prevent attacks wherever possible, but also deal with the consequences of failures. And, within the context of your coherent architecture, you'll learn how to decide when to invest in a new security product and when not to. Bellovin, co-author of the best-selling *Firewalls and Internet Security*, caught his first hackers in 1971. Drawing on his deep experience, he shares actionable, up-to-date guidance on issues ranging from SSO and federated authentication to BYOD, virtualization, and cloud security. Perfect security is impossible. Nevertheless, it's possible to build and operate security systems far more effectively. *Thinking Security* will help you do just that.

Understanding Options for Agricultural Production G.Y. Tsuji 2013-03-14 The first premise of this book is that farmers need access to options for improving their situation. In agricultural terms, these options might be management alternatives or different crops to grow, that can stabilize or increase household income, that reduce soil degradation and dependence on off-farm inputs, or that exploit local market opportunities. Farmers need a facilitating environment, in which affordable credit is available if needed, in which policies are conducive to judicious management of natural resources, and in which costs and prices of production are stable. Another key ingredient of this facilitating environment is information: an understanding of which options are viable, how these operate at the farm level, and what their impact may be on the things that farmers perceive as being important. The second premise is that systems analysis and simulation have an important role to play in fostering this understanding of options, traditional field experimentation being time-consuming and costly. This book summarizes the activities of the International Benchmark Sites Network for Agrotechnology Transfer (IBSNAT) project, an international initiative funded by the United States Agency for International Development (USAID). IBSNAT was an attempt to demonstrate the effectiveness of understanding options through systems analysis and simulation for the ultimate benefit of farm households in the tropics and subtropics. The idea for the book was first suggested at one of the last IBSNAT group meetings held at the University of Hawaii in 1993.

Integrated Weed and Soil Management J. L. Hatfield 1997-11-01 Integrated Weed and Soil Management explores the connection between soil science and weed control, providing the latest research and applications for weed management in agricultural systems. Five major areas discussed include: surface residue, tillage, and weed and soil management integration of soil and weed management to reduce environmental degradation modeling weed emergence, interference, and management new technology and management development of the next generation of weed management systems Throughout the text, the editors and contributors replace weed control terminology with weed management terminology, shifting the paradigm of one of control to one of better management. Integrated Weed and Soil Management, a great reference for higher research, improves your understanding of soil science, weed biology, and ecology - leading to effective practical application and maximum results.

Dog & Bitch Island Robert Blake Whitehill 2018-04 Ben Blackshaw's old friend Travis Cynter is dead. Cynter was Blackshaw's comrade-in-arms in the U.S. Navy SEALs. He was killed in full tactical gear during a black-ops mission on American soil. FBI Agents Molly Wilde and Pershing Lowry try to draw Blackshaw into helping them solve Cynter's murder. The agents need Blackshaw because the case landed in their laps from an American intelligence agency with overseas interests. From two previous cases, these Feds have come to appreciate how Blackshaw can work in the shadows, off the books, and be easily disavowed should his investigations implode. Blackshaw is torn. He has a longstanding mistrust of doing any kind of clandestine work for government intelligence agencies. In fact, when patriotism has led him to do the right thing in the past, usually against his better judgement and instincts, his friends and loved ones have suffered; many have died. Helping Wilde and Lowry always comes at too great a cost. This unhappy history weighs heavily against Blackshaw's profound desire to solve the mystery of Travis Cynter's death. Should he serve with patriotic duty to an ideal that might not exist, or act with honor to clear the name of his murdered friend? Against the wishes of LuAnna, Blackshaw's expectant wife, and contrary to the grim and hard-won advice of his friend Knocker Ellis Hogan, Blackshaw reluctantly launches the investigation with a close study of the murder scene on Dog & Bitch Island near Ocean City, Maryland. The trio finds the exact spot where Travis Cynter died. It is LuAnna who discovers a clue which spins the team into a deadly transatlantic chase; she quickly learns that the Feds have not told them the whole truth about Cynter's final mission. Thanks to Ellis's wisdom and wealth, and LuAnna's independent deductive logic, Blackshaw operates like a small covert agency unto himself. Along the way, he tangles with an old enemy, discovers an unfinished SEAL mission, and cuts out rot at the highest levels of government, including a scandal that could rally terrorists the world over. And it is all controlled by the iron hand of a shadowy syndicate called Faction.

Sport 2.0 Andy Miah 2017-02-17 Ramifications of the convergence of sports and digital technology, from athlete and spectator experience to the role of media innovation at the Olympics. Digital technology is changing everything about modern sports. Athletes and coaches rely on digital data to monitor and enhance performance. Officials use tracking systems to augment their judgment in what is an increasingly superhuman field of play. Spectators tune in to live sports through social media, or even through virtual reality. Audiences now act as citizen journalists whose collective shared data expands the places in which we consume sports news. In Sport 2.0, Andy Miah examines the convergence of sports and digital cultures, examining not only

how it affects our participation in sport but also how it changes our experience of life online. This convergence redefines how we think of about our bodies, the social function of sports, and the kinds of people who are playing. Miah describes a world in which the rise of competitive computer game playing—e-sports—challenges and invigorates the social mandate. Miah also looks at the Olympic Games as an exemplar of digital innovation in sports, and offers a detailed look at the social media footprint of the 2012 London Games, discussing how organizers, sponsors, media, and activists responded to the world's largest media event. In the end, Miah does not argue that physical activity will cease to be central to sports, or that digital corporeality will replace the nondigital version. Rather, he provides a road map for how sports will become mixed-reality experiences and abandon the duality of physical and digital.

Radiology in Forensic Medicine Giuseppe Lo Re 2019-07-04 This book offers a comprehensive overview of the forensic and radiological aspects of pathological findings, focusing on the most relevant medico-legal issues, such as virtual autopsy (virtopsy), anthropometric identification, post-mortem decomposition features and the latest radiological applications used in forensic investigations. Forensic medicine and radiology are becoming increasingly relevant in the international medical and legal field as they offer essential techniques for determining cause of death and for anthropometric identification. This is highly topical in light of public safety and economic concerns arising as a result of mass migration and international tensions. The book discusses the latest technologies applied in the forensic field, in particular computed tomography and magnetic resonance, which are continuously being updated. Radiological techniques are fundamental in rapidly providing a full description of the damage inflicted to add to witness and medical testimonies, and forensic/radiological anthropology supplies valuable evidence in cases of violence and abuse. Written by international experts, it is of interest to students and residents in forensic medicine and radiology. It also presents a new approach to

forensic investigation for lawyers and police special corps as well as law enforcement agencies.

These chapters discuss chemical weed control, the properties and uses of herbicides, factors affecting herbicide performance, herbicide application, herbicide formulation, ecological impact of herbicides, pesticide registration and legislation, weed management systems, and the future of weed science.

Dinky: the Nurse Mare's Foal Marta Moran-Bishop 2021-08-13 Winnie Award Winner at the Equus Film Festival. Dinky: The Nurse Mare's Foal is the story of one little foals fight for survival after being taken from his mother within hours of his birth. Dinky, takes us on a poignant trip through the heart and mind of an animal, who was born for the sole purpose of producing milk in the mare. In the elite world of horses, Dinky was considered a by-product, a 'junk foal.' Dinky's story will resonate with animal lovers, as well as anyone who has adopted. Although a horse, his story has been called an adoption story. The reader can follow him through the heartbreak, cruelty, loneliness, and finally to happiness in his forever home. His story is based on true events. Each event from the moment the author met Dinky actually happened, though it is the author's interpretation of what he might have been thinking and feeling during the occasions described in his story. His early life which is unknown has been fictionalized by the author and constructed through research and imagination. There are many wonderful animal rescue leagues, many are very empathic to these young animals, though some are not. Since Ms. Bishop has no knowledge of Dinky's early days she used the latter to enhance the strength of his story. It will break your heart, open your eyes, lift you up, and teach you much about horses. It is suitable for all ages.

Evolution and Classification Anna Claybourne 2017-04-13 Evolution and classification are brilliant things to study scientifically. Plants, humans and other animals have incredible adaptations that mean they can survive in their habitats on Earth. In *Evolution and Classification* you'll delve into the science behind these marvels of the natural world by conducting experiments using the ATOM method - Ask, Test, Observe and Measure - to

ensure you're working just like a professional scientist. Find out why camouflage is important for survival and how humans and other animals decide whether something is food or not. Discover the ways some animals attract a mate to breed the important role genes play! At the end of the book, scientific guidelines explain why scientists do things a certain way and the things they look out for or try to avoid. Science Skills Sorted are six topic books for children aged 8+ studying KS2 science. The ATOM method is designed to help readers work scientifically as they are taught to in the classroom, and each of the experiments is accompanied by explanatory text to uncover facts about the topic. A range of experiments in each book means that while some may need a little more equipment than others, there are plenty experiments that are cheap and accessible, using objects easily found in the classroom or at home.

DRECKIGES GOLD Robert Blake Whitehill 2021-05-28 (Neuaufgabe von DEADRISE - GNADENLOSE JAGD) Der ehemalige Navy SEAL Ben Blackshaw entdeckt beim Austerntauchen in der eisigen Chesapeake Bay das

gesunkene Wrack eines Rennbootes, millionenschwer beladen mit Kisten voller Goldbarren. Eine der Kisten, die er öffnet, enthält jedoch eine schmutzige Nuklearbombe. Und mit Öffnung der Kiste hat er versehentlich einen vierundzwanzigstündigen Countdown bis zu ihrer Detonation ausgelöst. Als wäre das noch nicht genug, erkennt er in der Leiche am Steuer des Wracks einen Mann, der seit fünfzehn Jahren als vermisst gilt: seinen Vater. Blackshaw reimt sich zusammen, dass sowohl das Gold als auch die Bombe Teil eines geheimen Regierungsgeschäfts waren, ausgehandelt von korrupten Intriganten der US-Regierung, und das sein alter Herr den Deal platzen ließ und sich beides aneignete. Maynard Chalk ist der Agent, der in einem Moment unverzeihlicher Ablenkung zuließ, dass die Transaktion nach hinten losging. Er muss die Ware so schnell wie möglich zurückbekommen, auch wenn er gezwungen ist, auf der Suche nach dem gestohlenen Gut mit einer Gruppe Terroristen gemeinsame Sache zu machen. Chalk und seine Schergen fallen auf Smith Island ein, der abgeschiedenen Heimat von Blackshaw, um Gold und Bombe zurückzuholen - koste es, was es wolle. Keine siebzig Meilen von Washington D.C. entfernt stehen sich die Inselbewohner auf der einen Seite und Chalk und seine blutrünstigen Schläger auf der anderen Seite gegenüber. Wenn Blackshaw scheitert, könnte sein wagemutiges Unterfangen als Auslöser des Dritten Weltkriegs in die Geschichte eingehen ... -----

Blackshaw has a disastrous falling out with his best friend, Knocker Ellis. Licking his wounds alone on Lethe Island, Blackshaw resolves to quit the Chesapeake. To his disgust, he soon uncovers evidence of the brutal lynching of a young black boy. Police fail to capture the murderers despite the evidence Blackshaw turns over; Blackshaw himself becomes a suspect. He deploys west to Arizona in search of the killers, and discovers an encampment of armed ranchers, along with a one-percenter biker gang, and a cult of white supremacist vigilantes who have all sworn to stop the flood of undocumented immigrants crossing the Mexico line. But everyone hides deadly secrets, including a biologic Weapon of Mass Destruction, the bizarre shoot-down of a Customs and Border Protection helicopter, and the disappearance of its crew. The vigilante camp itself is surrounded by a raging wildfire. Blackshaw teams with Del, an Apache member of the Geronimo Interagency Hotshot Crew, who was detailed to battle the blaze. Together they patrol in on the gathering of monsters. Part of their treacherous journey takes Blackshaw and Del through a cavern system of strange, wondrous, and lethal beauty. In the end, fire and hate threaten to consume everyone; the light of the inferno reveals that Blackshaw might be no better than the quarry he hunts.

Danged Black Thing Eugen Bacon 2021-11 'Eugen Bacon gives us a cornucopia of dark fruitfulness. Her writing is equal parts fecund earth and fine-cut jewels; her stories juxtapose the scarred and abused with the powerfully magical, the numinous and the deceptively mundane. They travel the known world, remaking all its parts as they go, and they pull new worlds, fully formed, from Bacon's unfettered imagination.' MARGO LANAGAN *Danged Black Thing* is an extraordinary collection of stories about love and migration, gender and class, patriarchy and womanhood, from a remarkable and original voice. Traversing the West and Africa, they celebrate the author's own hybridity with breathtaking sensuousness and lyricism. Simbiyu wins a scholarship to study in Australia, but cannot leave behind a world of walking barefoot, orange sun and his longing for a 'once pillow-soft mother'. In his past, a darkness rose from the river, and something nameless and mystical continues to envelop his life. In 'A Taste of Unguja' sweet taarab music, full of want, seeps into a mother's life on the streets of Melbourne as she evokes the powers of her ancestors to seek vengeance on her cursed ex. In

the cyberfunk of 'Unlimited Data' Natukunda, a village woman, gives her all for her family in Old Kampala. Other stories explore with power what happens when the water runs dry - and who pays, capture the devastating effects on women and children of societies in which men hold all the power, and themes of being, belonging, otherness. Speculative, realistic and even mythological, but always imbued with truth, empathy and Blackness, *Danged Black Thing* is a literary knockout.
