Ancient Textile Production from an Interdisciplinary Perspective Agata Ulanowska 2022 The diverse developments in textile research of the last decade, along with the increased recognition of the importance of textile studies in adjacent fields, now merit a dedicated, full-length publication entitled *Ancient Textile Production from an Interdisciplinary Perspective: Humanities and Natural Sciences Interwoven for our Understanding of Textiles*. With this volume, the authors and the editors wish to illustrate to the current impact of textile archaeology on the scholarly perception of the past (not limited to archaeology alone). The volume presents new insights into the consumption, meaning, use and re-use of textiles and dyes, all of which are topics of growing importance in textile research. As indicated by the title, we demonstrate the continued importance of interdisciplinarity by showcasing several interwoven approaches to environmental and archaeological remains, textual and iconographic sources, archaeological experiments and ethnographic data, from a large area covering Europe and the Mediterranean, Near East, Africa and Asia. The chronological span is deliberately wide, including materials dating from c. 6th millennium BCE to c. mid-14th century CE. The volume is organised in four parts that aim to reflect the main areas of the textile research in 2020. After the two introductory chapters (Part I: About this Volume and Textile Research in 2020), follow two chapters referring to dyes and dyeing technology in which analytical and material-based studies are linked to contextual sources (Part II: Interdisciplinarity of Colour: Dye Analyses and Dyeing Technologies). The six chapters of Part III: Interdisciplinary Approaches to Textile Tools discuss textiles and textile production starting from the analyses of tools, whether functional or as representative of technological developments or user identity. Archaeological and cultural contexts as well as textile traditions are the main topics of the six chapters in Part IV: Traditions and Contexts: Fibres, Fabrics, Techniques, Uses and Meanings. The two final chapters in Part V: Digital Tools refer to the use of digital tools in textile research, presenting two different case studies. .

Crafting Textiles Frances Pritchard 2022-01-15 New research into the techniques of tablet weaving, sprang, braiding, knotting and lace is presented in this lavishly illustrated volume written by leading specialists from Austria, Canada, Denmark, France, Germany, Sweden, Switzerland, the UK, and USA. Drawing inspiration from the pioneering work of Peter Collingwood, this publication explores aspects of these craft skills in the prehistoric, Roman, and medieval world through scientific, object-based analysis and 'research through making'. Chapters include the growth of patterned tablet weaving for trimming garments in prehistoric Central Europe; recently identified styles of headdress worn in the Roman Rhineland and pre-Islamic Egypt; Viking-age Dublin as a production center for tablet-woven bands; a new interpretation of the weaving technique used to make luxurious gold bands in the twelfth to late thirteenth centuries; and the development out of plaiting of bobbin lace borders in gold and silver threads from the fifteenth to early seventeenth centuries. Practical experiments test methods of hand spinning and the production of figure-hugging hose in ancient Greece and Renaissance Italy. A typology

of braid and knotting structures in late medieval Europe is also set out for the first time. Diagrams, illustrations, and photographs enrich each chapter with a wealth of visual source material. The work is the outcome of recent discoveries of archaeological textile finds from excavations as well as fresh examination of material recovered in the past, or preserved in treasuries. Early textiles form an increasingly popular subject of interest and this publication, which is a landmark in the study of various specialized textile techniques, aims to provide the reader with a better understanding of these virtuoso craft skills in antiquity.

Byways in Hand-weaving 1973

Collective Agreements Susan Hayter 2018 Collective bargaining involves a process of negotiation between one or more unions and an employer or employers' organisation(s). The outcome is a collective

agreement that defines terms of employment - typically wages, working hours and in-work benefits. The agreement affords labour protection: minimum wages, regular earnings; limits on working hours and predictable work schedules; safe working environments; parental leave and sick leave; and a fair share in the benefits of increased productivity. The International Labour Organization (ILO) Collective Agreements Recommendation 1951 (No. 91) considers, where appropriate and having regard to national practice, that measures should be taken to extend the application of all or some provisions of a collective agreement to all employers and workers included within the domain of the agreement. The extension of a collective agreement generalises the terms and conditions of employment, agreed between organised firms and workers, represented through their association(s) and union(s), to the non-organised firms within a sector, occupation or territory. The collection of chapters in this volume are about the extension of collective agreements as an act of public policy.
