Nursing Diagnoses 2009-2011, Custom NANDA International 2010-06-11 A nursing diagnosis is defined as a clinical judgement about individual, family or community responses to actual or potential health problems or life processes which provide the basis for selection of nursing

interventions to achieve outcomes for which the nurse is accountable. Accurate and valid nursing diagnoses guide the selection of interventions that are likely to produce the desired treatment effects and determine nurse-sensitive outcomes. Nursing diagnoses are seen as key to the future of evidence-based, professionally-led nursing care – and to more effectively meeting the need of patients and ensuring patient safety. In an era of increasing electronic patient health records standardized nursing terminologies such as NANDA, NIC and NOC provide a means of collecting nursing data that are systematically analyzed within and across healthcare organizations and provide essential data for cost/benefit analysis and clinical audit. 'Nursing Diagnoses: Definitions and Classification' is the definitive guide to nursing diagnoses worldwide. Each nursing diagnoses undergoes a rigorous assessment process by NANDA-I with stringent criteria to indicate the strength of the underlying level of evidence. Each diagnosis comprises a label or name for the diagnosis and a definition. Actual diagnoses include defining characteristics and related factors. Risk diagnoses include risk factors. Many diagnoses are further qualified by terms such as effective, ineffective, impaired, imbalanced, readiness for, disturbed, decreased etc. The 2009-2011 edition is arranged by concept according to Taxonomy II domains (i.e. Health promotion, Nutrition, Elimination and Exchange, Activity/Rest, Perception/Cognition, Self-Perception, Role Relationships, Sexuality, Coping/ Stress Tolerance, Life Principles, Safety/Protection, Comfort, Growth/Development). The book contains new chapters on 'Critical judgement and assessment' and 'How to identify appropriate diagnoses' and core references for all nursing diagnoses. A companion website hosts NANDA-I position statements, new PowerPoint slides, and FAQs for students. 2009-2011 edition arranged by concepts New chapters on 'Critical judgement and assessment' and 'How to identify appropriate diagnoses' Core references for new diagnoses and level of evidence for each diagnosis Companion website available

Care Planning Benita Wilson 2018-08-27 This clear and intuitive introduction to care planning for nurses explains the benefits of holistic, individualised care planning from a professional and clinical perspective. Using the ASPIRE model, it guides the reader step-by-step through a problem-solving approach to care, from assessing patients and identifying their needs, to planning goals and interventions, and evaluating progress. The book is structured to explain the theory of care planning in relation to a number of common nursing models and then show how the theory can best be put into practice. It draws on recent research to show how nurses can develop individualised care plans from scratch or use and adapt a range of 'off-the-shelf' tools. It is written in a clear, succinct and down-to-earth writing style, which will put students immediately at their ease, and is rich with pedagogic features, including: 'Stop and think' boxes to check understanding; boxed 'Practice examples' to illustrate points made; 'Research summary' boxes to highlight relevant and important studies; 'What have you learnt so far?' features to recap on key points of discussion; mini care plans; regular activities to encourage the reader to apply what they have learnt to particular practice scenarios. This is a go-to text for all pre-registration nursing students taking courses on the theory and practice of effective healthcare delivery.

Laparoscopic Inguinal Hernia Repair Ara Darzi 1994 The repair and management of inguinal hernias represents a significant part of the general surgeon's workload. It was therefore inevitable that following the success of laparoscopic cholecystectomy, surgeons would develop a procedure for repairing inguinal hernias laparoscopically. This book provides the first comprehensive account of laparoscopic inguinal hernia repair. The Editors' aim has been to give step-by-step guidance to each operative procedure discussed with reference to long term results. One of the biggest problems facing surgeons learning new laparoscopic procedures is an understanding and orientation of basic anatomy when viewed through the laparoscope. This issue is discussed at length with guidance on how to avoid the common pitfalls. Final chapters look at the advantages and disadvantages of the Lichtenstein open mesh hernia repair approach, safety and properties of non-absorbable mesh with the last chapters concentrating on laparoscopic suture repair and the new mini hernia operation.
