The SAGE Guide to Curriculum in Education Ming Fang He 2015-06-05 The SAGE Guide to Curriculum in Education integrates, summarizes, and explains, in highly accessible form, foundational knowledge and information about the field of curriculum with brief, simply written overviews for people outside of or new to the field of education. This Guide supports study, research, and instruction, with content that permits quick access to basic information, accompanied by references to more in-depth presentations in other published sources. This Guide lies between the sophistication of a handbook and the brevity of an encyclopedia. It addresses the ties between and controversies over public debate, policy making, university scholarship, and school practice. While tracing complex traditions, trajectories, and evolutions of curriculum scholarship, the Guide illuminates how curriculum ideas, issues, perspectives, and possibilities can be translated into public debate, school practice, policy making, and life of the general public focusing on the aims of education for a better human condition. 55 topical chapters are organized into four parts: Subject Matter as Curriculum, Teachers as Curriculum, Students as Curriculum, and Milieu as Curriculum based upon the conceptualization of curriculum commonplaces by Joseph J. Schwab: subject matter, teachers, learners, and milieu. The Guide highlights and explicates how the four commonplaces are interdependent and interconnected in the decision-making processes that involve local and state school boards and government agencies, educational institutions, and curriculum stakeholders at all levels that address the central curriculum questions: What is worthwhile? What is worth knowing, needing, experiencing, doing, being, becoming, overcoming, sharing, contributing, wondering, and imagining? The Guide benefits undergraduate and graduate students, curriculum professors, teachers, teacher educators, parents, educational leaders, policy makers, media writers, public intellectuals, and other educational workers. Key Features: Each chapter inspires readers to understand why the particular topic is a cutting edge curriculum topic; what are the pressing issues and contemporary concerns about the topic; what historical, social, political, economic, geographical, cultural, linguistic, ecological, etc. contexts surrounding the topic area; how the topic, relevant practical and policy ramifications, and contextual embodiment can be understood by theoretical perspectives; and how forms of inquiry and modes of representation or expression in the topic area are crucial to develop understanding for and make impact on practice, policy, context, and theory. Further readings and resources are provided for readers to explore topics in more details.

**Dual Language Education** Kathryn J. Lindholm-Leary 2001-01-01 Dual language education is a

program that combines language minority and language majority students for instruction through two languages. Research findings summarize language proficiency and achievement outcomes from 8000 students at 20 schools, along with teacher and parent attitudes.

Critical Thinking, Thoughtful Writing John Chaffee 2011-01 CRITICAL THINKING, THOUGHTFUL WRITING begins with the premise that thinking well involves using language well, and vice versa. This rhetoric with readings--written by critical-thinking scholar John Chaffee and English professors Christine McMahon and Barbara Stout--provides thorough coverage of the writing process, going beyond the traditional rhetoric to teach students how to evaluate sources, images, and arguments. Each chapter focuses on a critical-thinking skill--such as problem solving or analysis of complex issues--that is explored through "Thinking-Writing Activities" and thematically linked readings. The text helps students develop these skills through carefully sequenced pedagogy and a cross-disciplinary approach that asks them to complete writing assignments and critically evaluate readings drawn from a variety of disciplines. The Fifth Edition offers new readings, a new "Thinking Critically About New Media" feature in each chapter, and more photos, which emphasize visual rhetoric.

Emerging Research, Practice, and Policy on Computational Thinking Peter J. Rich 2017-05-03 This book reports on research and practice on computational thinking and the effect it is having on education worldwide, both inside and outside of formal schooling. With coding becoming a required skill in an increasing number of national curricula (e.g., the United Kingdom, Israel, Estonia, Finland), the ability to think computationally is quickly becoming a primary 21st century "basic" domain of knowledge. The authors of this book investigate how this skill can be taught and its resultant effects on learning throughout a student's education, from elementary school to adult learning.

*The Science of Roman History* Walter Scheidel 2018-04-03 How the latest cutting-edge science offers a fuller picture of life in Rome and antiquity This groundbreaking book provides the first comprehensive look at how the latest advances in the sciences are transforming our understanding of ancient Roman history. Walter Scheidel brings together leading historians, anthropologists, and geneticists at the cutting edge of their fields, who explore novel types of evidence that enable us to reconstruct the realities of life in the Roman world. Contributors discuss climate change and its impact on Roman history, and then cover botanical and animal remains, which cast new light on agricultural and dietary practices. They exploit the rich record of human skeletal material--both bones and teeth—which forms a bio-archive that

has preserved vital information about health, nutritional status, diet, disease, working conditions, and migration. Complementing this discussion is an in-depth analysis of trends in human body height, a marker of general well-being. This book also assesses the contribution of genetics to our understanding of the past, demonstrating how ancient DNA is used to track infectious diseases, migration, and the spread of livestock and crops, while the DNA of modern populations helps us reconstruct ancient migrations, especially colonization. Opening a path toward a genuine biohistory of Rome and the wider ancient world, *The Science of Roman History* offers an accessible introduction to the scientific methods being used in this exciting new area of research, as well as an up-to-date survey of recent findings and a tantalizing glimpse of what the future holds.

*Teaching the Content Areas to English Language Learners in Secondary Schools* Luciana C. de Oliveira 2019-01-17 This practitioner-based book provides different approaches for reaching an increasing population in today's schools - English language learners (ELLs). The recent development and adoption of the Common Core State Standards for English Language Arts and Literacy in History/Social Studies, Science, and Technical Subjects (CCSS-ELA/Literacy), the Common Core State Standards for Mathematics, the C3 Framework, and the Next Generation Science Standards (NGSS) highlight the role that teachers have in developing discipline-specific competencies. This requires new and innovative approaches for teaching the content areas to all students. The book begins with an introduction that contextualizes the chapters in which the editors highlight transdisciplinary theories and approaches that cut across content areas. In addition, the editors include a table that provides a matrix of how strategies and theories map across the chapters. The four sections of the book represent the following content areas: English language arts, mathematics, science, and social studies. This book offers practical guidance that is grounded in relevant theory and research and offers teachers suggestions on how to use the approaches described.

*Touching Spirit Bear* Ben Mikaelson 2010-04-20 In his Nautilus Award-winning classic *Touching Spirit Bear*, author Ben Mikaelson delivers a powerful coming-of-age story of a boy who must overcome the effects that violence has had on his life. After severely injuring Peter Driscoll in an empty parking lot, mischief-maker Cole Matthews is in major trouble. But instead of jail time, Cole is given another option: attend Circle Justice, an alternative program that sends juvenile offenders to a remote Alaskan Island to focus on changing their ways. Desperate to avoid prison, Cole fakes humility and agrees to go. While there, Cole is mauled by a mysterious white bear and left for dead. Thoughts of his abusive parents, helpless Peter, and his own anger cause him to examine his actions and seek redemption—from the spirit bear that attacked him, from his victims, and, most importantly, from himself. Ben Mikaelson paints a vivid picture of a juvenile offender, examining the roots of his anger without absolving him of responsibility for his actions, and questioning a society in which angry people make victims of their peers and communities. *Touching Spirit Bear* is a poignant testimonial to the power of a pain that can destroy, or lead to healing. A strong choice for independent reading, sharing in the classroom, homeschooling, and book groups.

**Pathogenic Mycobacteria in Water** Dufour A. 2004-09-23 Environmental mycobacteria can be found in diverse environments around the world, some of which have the ability to infect animals, birds and humans and have evolved mechanisms by which they can invade and grow within host cells, the pathogenic environmental mycobacteria (PEM). Although the diseases caused by these organisms have been known for many years, it is only recently that the potential significance of PEM as a waterborne pathogen has been appreciated. This publication discusses current knowledge about the distribution of PEM in water and other parts of the environment, the routes of transmission that lead to human infection, the most significant disease symptoms that can follow infection, methods of analysis and detection, the control of PEM in drinking-water and the assessment and management of risks.

**Visual Propaganda and Extremism in the Online Environment** Strategic Studies Institute 2014-07-28 Most of the papers included in this volume, except for the editor's introduction, come from the conference on Visual Propaganda and Online Radicalization hosted in 2012 by Georgia State University in conjunction with the U.S. Army War College. They all speak to the power of visual images, particularly in the online environment, and the sophistication with which a variety of extremist and terrorist groups have adapted to the online environment, particularly through the use of powerful visual images. The strategic point made in these essays, and which serves as a unifying theme throughout the collection, is that weaker forces use these materials to great effect, and to even greater effect when we either underestimate the power of visual images or fail to develop effective counters. The unique value offered by these essays is to lay out clearly the ways in which images work for extremist groups, and to begin the process of developing effective strategies for responding.

*The Status of Social Studies* Jeff Passe 2013-10-01 A team of researchers from 35 states across the country developed a survey designed to create a snapshot of social studies teaching and learning in the United States. With over 12,000 responses, it is the largest survey of social studies teachers in over three decades. We asked teachers about their curricular goals, their methods of instruction, their use of technology, and the way they address the needs of English language learners and students with disabilities. We gathered demographic data too, along with inquiries about the teachers' training, their professional development experiences, and even whether they serve as coaches. The enormous data set from this project was analyzed by multiple research teams, each with its own chapter. This volume would be a valuable resource for any professor, doctoral student, or Master's student examining the field of social studies education. It is hard to imagine a research study, topical article, or professional development session concerning social studies that would not quote findings from this book about the current status of social studies. With chapters on such key issues as the teaching of history, how teachers address religion, social studies teachers' use of technology, and how teachers adapt their instruction for students with disabilities or for English language learners, the book's content will immediately be relevant and useful.

Teacher s Manual, Robert J. Marzano and Debra J. Pickering give teachers a practical way to help students master academic vocabulary. Research has shown that when teachers, schools, and districts take a systematic approach to helping students identify and master essential vocabulary and concepts of a given subject area, student comprehension and achievement rises. In the manual, readers will find the following tools: \* A method to help teachers, schools, and districts determine which academic vocabulary terms are most essential for their needs \* A six-step process for direct instruction in subject area vocabulary \* A how-to to help students use the Building Academic Vocabulary: Student Notebook. The six-step method encourages students to learn critical academic vocabulary by connecting these terms to prior knowledge using linguistic and non-linguistic means that further encourage the refinement and deepening of their understanding. \* Suggestions for tailoring academic vocabulary procedures for English Language Learners. \* Samples and blackline masters for a variety of review activities and games that reinforce and refine student understanding of the academic terms and concepts they learn. The book also includes a list of 7, 923 vocabulary terms culled from the national standards documents and other publications, organized into 11 subject areas and 4 grade-level categories. Building Academic Vocabulary: Teacher s Manual puts into practice the research and ideas outlined in Marzano s previous book Building Background Knowledge for Academic Achievement. Using the teacher s manual and vocabulary notebooks, educators can guide students in using tools and activities that will help them deepen their own understanding of critical academic vocabulary--the building blocks for achievement in each discipline.
