The last thing Sophie Fortin expects at a masquerade ball is a dazzling kiss from a pirate. Her desire quickly falters when she learns that her masked gentleman is devilishly scandalous Lord Jack, a member of the captivating Wilde clan—and a man she's forbidden to acknowledge. But when Jack begins a breathtaking seduction, Sophie can barely resist. Jack never imagined that the daughter of his family's mortal enemy would awaken such fierce passion within him—until one unforgettable kiss changes his mind forever. Soon, Jack is hell-bent on winning Sophie's hand, going so far as to abduct her to save her from marrying a rival nobleman. Determined to woo Sophie and her unyielding parents, Jack is faced with the one decision he'd sworn never to make. The secret heir to a prince, Jack has spurned his royal heritage for years . . . but for Sophie he'll risk all to turn a legacy of heartbreak into love ever after. Physics Eugene Hecht 2000 Hecht brings to bear the perspective of both historical concepts and contemporary physics. While the text covers the standard range of material from kinematics to quantum physics, Hecht has carefully limited the math required to basic calculus and very basic vector analysis. He omits obscure, high-level topics while focusing on helping students understand the fundamental concepts of modern-day physics. Calculus and vector analysis are both painstakingly developed as tools, and then used only insofar as they illuminate the physics. Hecht deliberately paces comfortably, justifies where each topic is going, stops to take stock of where the students have been, and points out the marvelous unity of the discourse. Informed by a 20th century perspective and a commitment to providing a conceptual overview of the discipline, Hecht's CALCULUS 2/e keeps students involved and focused.

Every year, some who try to climb the highest mountain in the world do not return. But for a century people have been coming to climb Everest - some alone, some in groups, but all with a dream of going to the highest place in the world. This is their story"--Back cover.

Psychology and Buddhism Kathleen H. Dockett 2006-05-02 This book advances a serious consideration of how the goals and practices of psychology can be informed and enriched by Buddhist traditions that transcend the individual to consider the interconnectedness of all things, and the responsibility we have towards the other. Individualistic and psychotherapeutic applications of Buddhism in psychology are examined, followed by a bold step into the community arena, with consideration given to the intersection between community psychology and Buddhist approaches to empowerment, social change, and prevention.

Foundations of Structural Geology R. Graham Park 1997 Since the first edition was published in 1983, this highly-regarded introductory textbook has been used by many generations of students worldwide. It is specifically tailored to the requirements of first or second year geology undergraduates. The third edition has been extensively revised and updated to include many new sections and over 50 new or redrawn illustrations. There are now over 220 illustrations, many incorporating a second colour to highlight essential features. The format has been changed to enhance the visual attractiveness of the

book. The tripartite organization of the first and second editions has been modified by combining the purely descriptive or factual aspects of fault and fold structure in the earlier chapters with a simple treatment of mechanisms, leaving the more geometrically complex treatment until after the relevant sections on stress and strain, as before. Some subjects are introduced for the first time, e.g. inversion and orogen collapse, and others have been extensively modified, e.g. the chapter on gravity controlled structures now emphasises modern work on salt tectonics. The last third of the book is devoted to the wider context of geological structures and how they relate to plate tectonics. The final two chapters have been considerably expanded and give examples of various types of geological structures in their plate tectonic settings in both modern and ancient orogenic belts.
