Policies for Diversity in Education Tony Booth 2013-09-27 The emphasis in this book shifts to the coordination of practice into schools, regional and national policies and the power and interest groups concerned with educational difficulties and disability. In the opening section the authors review the location of power in the systems; the impact of Local Management of Schools, case studies of Union policy, the National Curriculum Council and voluntary societies. They then look at one threatened element of the power structure - the local education authorities. They examine the features of local authority policy and attempt to systematise local policy. The experience of families is examined in their relationships with professionals, particularly during the preparation of Statements of Special Educational Need. This is followed by sections on services for under-fives, integrating education and the authors provide examples of changing school policies and the practices that have arisen from them; supporting the learning of all pupils in primary and secondary schools, changing the role of special schools, ensuring that girls and boys are provided with equal opportunities, writing a development plan and the experience of a teacher with a disability. They then examine policies and practices in education after school and finish with theories of integration and disability.

Psychological and Pharmacological Treatments for Adults with Posttraumatic Stress Disorder: A Systematic Review Update Agency For Healthcare Resea And Quality 2019-03-14 Posttraumatic stress disorder (PTSD) involves a group of symptoms experienced after exposure to a potentially traumatic event. Symptoms may include re-experiencing the event; avoiding situations that trigger

memories of that event; experiencing increased negative feelings and beliefs; experiencing feelings of hyperarousal; these feelings may include irritability, agitation, anger, or being on alert; and experiencing various combinations of these indicators. The traumatic event (stressor) must involve either witnessing an actual or threatened death or serious injury or other threat to one's physical integrity or witnessing an event that involves death, injury, or a threat to the physical integrity of another person. Alternatively, the event must involve learning about unexpected or violent death, serious harm, or threat of death or injury experienced by a family member or other close associate. Some traumatic events that are directly experienced include military combat, violent personal assault, being part of a hostage situation, a terrorist attack, torture, natural or manmade disasters, and being diagnosed with a life-threatening illness. They can also comprise relational trauma such as sexual, physical, and emotional abuse and domestic violence. Not all people exposed to a potentially traumatic event, however, go on to develop posttraumatic stress symptoms and PTSD. This systematic review uses current methods to update a report published in 2013 that evaluated psychological and pharmacological treatments of adults with posttraumatic stress disorder (PTSD). This review focuses on updating the earlier work, expanding the range of treatments examined, addressing earlier uncertainties, identifying ways to improve care for PTSD patients, and reducing variation in existing treatment guidelines.
