RETAILING: TRENDS IN THE NEW MILLENNIUM R. Shanthi, M. Rafeeqe Ahmed, S. Gurusamy, P. Murari 2019-06-03 The origins of retail are old as trade itself. Barter was the oldest form of trade. For centuries, most merchandise was sold in market place or by peddlers. Medieval markets were dependent on local sources for supplies of perishable food because Journey was far too slow to allow for long distance transportation. However, customer did travel considerable distance for specialty items. The peddler, who provided people with the basic goods and necessities that they could not be self sufficient in, followed one of the earliest forms of retail trade. Even in prehistoric time, the peddler traveled long distances to bring products to locations which were in short supply. "They could be termed as early entrepreneurs who saw the opportunity in serving the needs of the consumers at a profit" Later retailers opened small shops, stocking them with such produce. As towns and cities grew, these retail stores began stocking a mix of convenience merchandise, enabling the formation of high-street bazaars that become the hub retail activity in every city. In the great sweep of social and retail history, the 'modern' shopping experience can be said to have commenced with the appearance of the department store in the middle of the 19th century.

The United Nations, Peace and Security Ramesh Thakur 2006-06-08 Preventing humanitarian atrocities is becoming as important for the United Nations as dealing with inter-state war. In this book, Ramesh Thakur examines the transformation in UN operations, analysing its changing role and structure. He asks why, when and how force may be used and argues that the growing gulf between legality and legitimacy is evidence of an eroded sense of international community. He considers the tension between the US, with its capacity to use force and project power, and the UN, as the centre of the international law enforcement system. He asserts the central importance of the rule of law and of a rules-based order focused on the UN as the foundation of a civilised system of international relations. This book will be of interest to students of the UN and international organisations in politics, law and international relations departments, as well as policymakers in the UN and other NGOs.

Management Education in India Manish Thakur 2016-08-08 This volume problematizes different facets of management education in India---pedagogy, curricula, and disciplinary and institutional practices---from the perspective of the Global South. The essays in this volume bring out the institutional challenges of crafting a relevant academic programme that converses with both national specificities and global realities. Coming from diverse academic specializations, the contributors traverse the interface of their respective disciplines with management education. In doing so, they engage with the ongoing global debate on management education. This volume fills a noticeable gap of serious, scholarly reflection on the state of management education. While there have been sporadic reflections and occasional critiques, a critical stocktaking of the institutional and disciplinary aspects of management education has been long wanting. This volume is of interest to scholars and practitioners of management education across the globe, and is likely to generate debate on its contemporary relevance and future trajectory.
