Tax Law and Digitalization: The New Frontier for Government and Business Jeffrey Owens 2021-09-15 New technologies are changing the way that tax administrations, taxpayers and their advisers interact, leading to a reduction in the compliance cost for taxpayers, a level playing field for large and small businesses, and fewer opportunities to engage in aggressive tax practices. Although entering a new world where processes are supported by machines inevitably disrupts traditional ways of working, the contributors to this indispensable book reveal the enormous potential of 'tax technology' to positively transform tax compliance, clearly showing both government and business how to manage the transition from the old to the new. With detailed treatment of the technology available in the tax field, the authors describe how to secure its benefits in such ways as the

following: electronic balance sheets and invoices; automated transmission to tax authorities; innovative analytics applications; blockchain in tax law processes; process mining in VAT; real-time reporting with cryptography; and meeting the challenges to taxpayers' rights to privacy and personal data protection. The contributions draw on an international conference held under the auspices of the Digital Economy Taxation Network at the Vienna University of Economics and Business in December 2020. The perspective throughout focuses on how to achieve better tax compliance at a lower cost. For this reason, this full-scale, practical guide on how to adapt tax law to new technologies and how to apply tax tech processes in practice will be welcomed by tax practitioners, tax administrations, and academics across the entire tax community.

This development is accompanied by crisis of eating behaviour and a philosophy of cooking as a speculative cultural technique. This volume investigates the dimensions of a new culinary turn, combining for the very first time contributions from the theory and practice of cooking.

Learning the Vi and Vim Editors Arnold Robbins 2008-07-15 There's nothing that hard-core Unix and Linux users are more fanatical about than their text editor. Editors are the subject of adoration and worship, or of scorn and ridicule, depending upon whether the topic of discussion is your editor or someone else's. vi has been the standard editor for close to 30 years. Popular on Unix and Linux, it has a growing following on Windows systems, too. Most experienced system administrators cite vi as their tool of choice. And since 1986, this book has been the guide for vi. However, Unix systems are not what they were 30 years ago, and neither is this book. While retaining all the valuable features of previous editions, the 7th edition of Learning the vi and vim Editors has been expanded to include detailed information on vim, the leading vi clone. vim is the default version of vi on most Linux systems and on Mac OS X, and is available for many other operating systems too. With this guide, you learn text editing basics and advanced tools for both editors, such as multi-window editing, how to write both interactive macros and scripts to extend the editor, and power tools for programmers -- all in the easy-to-follow style that has made this book a classic. Learning the vi and vim Editors includes: A complete introduction to text editing with vi: How to move around vi in a hurry Beyond the basics, such as using buffers vi's global search and replacement Advanced editing, including customizing vi and executing Unix commands How to make full use of vim: Extended text objects and more powerful regular expressions Multi-window editing and powerful vim scripts How to make full use of the GUI version of vim, called gvim vim's enhancements for programmers, such as syntax highlighting, folding and extended tags Coverage of three other popular vi clones -- nvi, elvis, and vile -- is also included. You'll find several valuable appendixes, including an alphabetical quick reference to both vi and ex mode commands for regular vi and for vim, plus an updated appendix on vi and the Internet. Learning either vi or vim is required knowledge if you use Linux or Unix, and in either case, reading this book is essential. After reading this book, the choice of editor will be obvious for you too.

Phenomenology to the Letter Philippe P. Haensler 2020-11-23 Regarding philosophical importance, Edmund Husserl is arguably "the" German export of the early twentieth century. In the wake of the linguistic turn(s) of the humanities, however, his claim to return to the "Sachen selbst" became metonymic for the neglect of language in Western philosophy. This view has been particularly influential in post-structural literary theory, which has never ceased to attack the supposed "logophobie" of phenomenology. "Phenomenology to the Letter. Husserl and Literature" challenges this verdict regarding the poetological and logical implications of Husserl's work through a thorough re-examination of his writing in the context of literary theory, classical rhetoric, and modern art. At issue is an approach to phenomenology and literature that does not merely coordinate the two discourses but explores their mutual implication. Contributions to the volume attend to the interplay between phenomenology and literature (both fiction and poetry), experience and language, as well as images and embodiment. The volume is the first of its kind to chart a phenomenological approach to literature and literary approach to phenomenology. As such it stands poised to make a novel contribution to literary studies and philosophy.

Atmospheric Architectures Gernot Böhme 2017-10-12 There is fast-growing awareness of the role atmospheres play in architecture. Of equal interest to contemporary architectural practice as it is to aesthetic theory, this 'atmospheric turn' owes much to the work of the German philosopher Gernot Böhme. Atmospheric Architectures: The Aesthetics of Felt Spaces brings together Böhme's most seminal writings on the subject, through chapters selected from his classic books and articles, many of which have hitherto only been available in German. This is the only translated version authorised by Böhme himself, and is the first coherent collection deploying a consistent terminology. It is a work which will provide rich references and a theoretical framework for ongoing discussions about atmospheres and their relations to architectural and urban spaces. Combining philosophy with architecture, design, landscape design, scenography, music, art criticism, and visual arts, the essays together provide a key to the concepts that motivate the work of some of the best contemporary architects, artists, and theorists: from Peter Zumthor, Herzog & de Meuron and Juhani Pallasmaa to Olafur Eliasson and James Turrell. With a foreword by Professor Mark Dorrian (Forbes Chair in Architecture, Edinburgh College of Art) and an afterword by Professor David Leatherbarrow, (Chair of the Graduate Group in Architecture, University of Pennsylvania), the volume also includes a general introduction to the topic, including coverage of it history, development, areas of application and conceptual apparatus.
