Geriatric Palliative Care Suzanne Goldhirsch 2014-03-21 The growing geriatric population in the United States has created an increasing need for palliative medicine services across the range of medical and surgical specialties. Yet, palliative medicine lacks the resources to carry such a workload itself. Geriatric Palliative Care addresses this need by encouraging individual specialties to "own" the management of elderly with the same vigor as they "own" other key management competencies within their specialty. This clinically focused and highly practical handbook, which compliments the more comprehensive text Geriatric Palliative Care by Sean Morrison and Diane Meier (Oxford University Press, 2003), encourages this process of learning and ownership across many medical specialties. Designed to be readable and easily accessible to a range of health care providers, Geriatric Palliative Care outlines specific strategies for caring for specific palliative care issues common in elderly patients. The handbook also provides evidence based advice for helping patients, relatives, and staff cope with such issues as polypharmacy, dementia and consent, multiple pathologies, home care, elderly caregivers, and supporting the elderly in the place where they would like to be.

**Textbook of Palliative Care** Roderick Duncan MacLeod 2019-06-15 Textbook of Palliative Care is a comprehensive, clinically relevant and state-of-the art book, aimed at advancing palliative care as a science, a clinical practice and as an art. Palliative care has been part of healthcare for over fifty years but we still find ourselves having to explain its nature and practice to colleagues and to the public in general. Healthcare education and training has been slow to recognize the vital importance of ensuring that all practitioners have a good understanding of what is involved in the care of people with serious or advanced illnesses and their families. However, the science of palliative care is advancing and our understanding concerning many aspects of palliative care is developing rapidly. The book is divided into separate sections for ease of use. Over 100 chapters written by experts in their given fields provide up-to-date information on a wide range of topics of relevance to those providing care towards the end of life no matter what the disease may be. We present a global perspective on contemporary and classic issues in palliative care with authors from a wide range of disciplines involved in this essential aspect of care. The Textbook includes sections addressing aspects such as symptom management and care provision, organization of care in different settings, care in specific disease groups, palliative care

emergencies, ethics, public health approaches and research in palliative care. This Textbook will be of value to practitioners in all disciplines and professions where the care of people approaching death is important, specialists as well as non-specialists, in any setting where people with serious advanced illnesses are residing. It is also an important resource for researchers, policy-and decision-makers at national or regional levels. Neither the science nor the art of palliative care will stand still so we aim to keep this Textbook updated as the authors find new evidence and approaches to care.
