Post-Genomic Perspectives in Modeling and Control of Breathing Jean Champagnat 2010-06-28 Post Genomic Perspectives in Modeling and Control of Breathing is comprised of the proceedings of the IXth Oxford Conference on Modeling and Control of Breathing, held September 13-16, 2003 in Paris, France. This publication is placed within the general framework of post-genomic neurobiology, pathology, and the precise example of the rhythmic respiratory neural assembly being used to understand how genetic networks have been selected and conserved in the vertebrate brain. Specific topics include: ion channels and synapses responsible for respiratory rhythmogenesis and plasticity; pre- and post-natal development of the respiratory rhythm; chemosensory transduction and chemo-afferent signalling. These valuable insights open new avenues as to why the genetic codes underlying a vital function such as breathing have been selected, conserved, or optimized during evolution – a major issue of post-genomic biology. This critical issue will be considered from both top-down and bottom-up integrative modeling standpoints, with a view to elucidating the functional genomics linking discrete molecules to the integrated system that regulates breathing.

Pharmacological Management of Headaches Dimos D. Mitsikostas 2015-08-26 In this book, headache experts summarize all the currently available therapies for primary headaches and most importantly, describe the 'tricks' that can ensure the success of headache pharmacotherapy. Prevention and acute treatment of migraine and cluster headache receive particular attention and individual chapters are devoted to the treatment of primary headaches in special groups, i.e. children, pregnant women and the elderly. Further chapters focus on selected secondary headache disorders and cranial neuralgias for which pharmacotherapy is available. The book is designed to meet the daily practice needs of general physicians, general neurologists, neurologists in training and medical students. Headache remains a leading reason for people to seek medical consultation, and migraine and other primary headache disorders are classified by the WHO as among the most disabling medical conditions in the general population, often affecting individuals during their most productive years. Unfortunately, under treatment and mismanagement are the fate of many headache patients and this book provides a sound basis for optimizing treatment.

Recent Advances in Enteral Nutrition 2018-01-10 The subject of enteral nutrition is an interesting one both to the healthcare professionals working in this practice area and to the individuals who may benefit from nutritional support. These individuals usually have functional guts but may be suffering from dysphagia (with the underlying neurological deficits) or the effects of radiotherapy treatment. Enteral nutrition involves the provision of nutritional support to individuals whose nutritional requirements cannot be met by a normal diet. In particular, it is the process of delivering enteral feed via feeding tubes such nasogastric feeding, nasojejunal and percutaneous endoscopic gastrostomy tubes. Often, enteral nutrition provision involves the assessment of nutritional status, the determination of nutritional requirements, the establishment of feeding regimes, and the management of patients, pumps, feeds, and feeding tubes. Researchers in this field are also keen to evaluate the effect of enteral feeding protocols, algorithms, and guidelines on patients with different medical conditions in various care settings. There have also been a series of comparisons between the use of feeding tubes, feeding methods, and management approaches. Economic evaluations of enteral nutrition and Home Enteral Nutrition (HEN) teams show the benefits of Home Enteral Tube Feeding (HETF); however, due to the rising cost of HETF, there has been intense debate on the subject. There have been reviews on advances, challenges, and prospects in enteral nutrition. This Special Issue is intended to provide information on recent advances in the area of enteral nutrition.
