All the Feels / Tous les sens Marie Carrière 2021-02-26 *All the Feels / Tous les sens* presents research into emotion and cognition in Canadian, Indigenous, and Québécois writings in English or French. Affect is both internal and external, private and public; with its fluid boundaries, it represents a productive dimension for literary analysis. The emerging field of affect studies makes vital claims about ethical impulses, social justice, and critical resistance, and thus much is at stake when we adopt affective reading practices. The contributors ask what we can learn from reading contemporary literatures through this lens. Unique and timely, readable and teachable, this collection is a welcome resource for scholars of literature, feminism, philosophy, and transnational studies as well as anyone who yearns to imagine the world differently. Contributors: Nicole Brossard, Marie Carrière, Matthew Cormier, Kit Dobson, Nicoletta Dolce, Louise Dupré, Margery Fee, Ana María Fraile-Marcos, Smaro Kamboureli, Aaron Kreuter, Daniel Laforest, Carmen Mata Barreiro, Ursula Mathis-Moser, Heather Milne, Eric Schmaltz, Maïté Snauwaert, Jeanette den Toonder

Color Atlas of Genetics Eberhard Passarge 2011-01-01 A remarkable achievement by a single author...concise but informative...No geneticist or physician interested in genetic diseases should be without a copy of this remarkable edition. --American Journal of Medical Genetics More than ever, a solid understanding of genetics is a fundamental element of all medical and scientific educational programs, across virtually all disciplines. And the applications--and implications--of genetic research are at the heart of current medical scientific debates. Completely updated and revised, *The Color Atlas of Genetics* is an invaluable guide for students of medicine and biology, clinicians, and anyone else interested in this rapidly evolving field. The latest edition of this highly praised atlas retains several popular features,

such as the accessible layout and logical structure, in addition to many novel features and 20 completely new color plates on new topics, including: Cell-to-cell communication, including important signaling and metabolic pathways Taxonomy of living organisms (tree of life) Epigenetic modifications in chromatin Apoptosis RNA interference (RNAi) Comparative genomic hybridization Origins of cancer Principles of gene and stem cell therapy, etc. With more than 200 absorbing full-color plates concisely explained on facing pages, the atlas offers readers an easy-to-use, yet remarkably detailed guide to key molecular, theoretical, and medical aspects of genetics and genomics. Brief descriptions of numerous genetic diseases are included, with references for more detailed information. Readers will find that this incomparable book presents a comprehensive picture of the field from its fascinating history to its most advanced applications.

WHO Classification of Skin Tumours D. E. Elder 2018-09-21 The WHO Classification of Skin Tumours is the 11th volume in the 4th edition of the WHO series on the classification of human tumours. The series (also known as the Blue Books) has long been regarded by pathologists as the gold standard for the diagnosis of tumours, and it is an indispensable guide for the design of evaluations, clinical trials, and studies involving cancer. These authoritative and concise reference books provide an international standard for anyone involved in cancer research or the care of cancer patients. Diagnostic criteria, pathological features, and genetic and other associated molecular alterations are described in a disease-oriented manner. This volume updates the existing ICD-O codes and provides new codes for use in epidemiology and cancer registration. It also provides information on clinical features, pathology, genetics, prognosis, and protective factors for each of the tumour types covered. The editors expect that this volume will be of particular interest to pathologists, oncologists, and dermatologists who manage or research skin tumours. Sections are included on all recognized neoplasms (and their variants) of the skin and its adnexae. Since the previous edition, there have been particularly substantial changes to the classification of melanoma, based on the latest information from genetic and molecular studies.

Historical Dictionary of Surrealism Keith Aspley 2010 Surrealism was a broad movement, which attracted many adherents. It was organized and quite strictly disciplined, at least until the death of its leader, André Breton, in 1966. As a consequence, its membership was in a constant state of flux: persons were constantly being admitted and excluded, and often the latter continued to regard themselves as Surrealists. The wide-ranging nature of the Surrealist movement was spread over many countries and many different art forms, including painting, sculpture, cinema, photography, music, theater, and literature, most notably poetry. The Historical Dictionary of Surrealism relates the history of this movement through a chronology, an introductory essay, a bibliography, and over 600 cross-referenced dictionary entries on persons, circles, and groups who participated in the movement; a global entry on some of the journals and reviews they produced; and a sampling of major works of art, cinema, and literature.

The Biochemistry of Drug Metabolism Bernard Testa 2010-04-26 Offering a conceptual and factual presentation of the metabolism of drugs and other xenobiotics, these two volumes distinctly focus on the biochemistry, with an emphasis on xenobiotic-metabolizing enzymes, their reactions and regulations. The first volume is divided into three parts. Part One begins by introducing xenobiotics in the broad context of physiological metabolism, and continues with an overview of the processes of drug disposition and metabolism. It then goes on to summarize the macroscopic and microscopic locations of drug ...

Biology of Ticks Volume 1 Daniel E. Sonenshine 2013-11-26 *Biology of Ticks* is the most comprehensive work on tick biology and tick-borne diseases. This second edition is a multi-authored work, featuring the research and analyses of renowned experts across the globe. Spanning two volumes, the book examines the systematics, biology, structure, ecological adaptations, evolution, genomics and the molecular processes that underpin the growth, development and survival of these important disease-transmitting parasites. Also discussed is the remarkable array of diseases transmitted (or caused) by ticks, as well as modern methods for their control. This book should serve as a modern reference for students, scientists, physicians, veterinarians and other specialists. Volume I covers the biology of the tick and features chapters on tick systematics, tick life cycles, external and internal anatomy, and others dedicated to specific organ systems, specifically, the tick integument, mouthparts and digestive system, salivary glands, waste removal, salivary glands, respiratory system, circulatory system and hemolymph, fat body, the nervous and sensory systems and reproductive systems. Volume II includes chapters on the ecology of non-nidicolous and nidicolous ticks, genetics and genomics (including the genome of the Lyme disease vector *Ixodes scapularis*) and immunity, including host immune responses to tick feeding and tick-host interactions, as well as the tick's innate immune system that prevents and/or controls microbial infections. Six chapters cover in depth the many diseases caused by the major tick-borne pathogens, including tick-borne protozoa, viruses, rickettsiae of all types, other types of bacteria (e.g., the Lyme disease agent) and diseases related to tick paralytic agents and toxins. The remaining chapters are devoted to tick control using vaccines, acaricides, repellents, biocontrol, and, finally, techniques for breeding ticks in order to develop tick colonies for scientific study.

Robbins Basic Pathology Vinay Kumar 2007-01-01 This 8th edition continues to provide outstanding, user-friendly coverage of the latest information in the field. Clinicopathologic correlations highlight the relationships between basic science and clinical medicine, while state-of-the-art gross and photomicrographic illustrations help to understand complex principles.

Digestive System Tumours WHO Classification of Tumours Editorial Board 2019-07-30 *Digestive System Tumours* is the first volume in the fifth edition of the WHO series on the classification of human tumors. This series (also known

as the WHO Blue Books) is regarded as the gold standard for the diagnosis of tumors and comprises a unique synthesis of histopathological diagnosis with digital and molecular pathology. These authoritative and concise reference books provide indispensable international standards for anyone involved in the care of patients with cancer or in cancer research, underpinning individual patient treatment as well as research into all aspects of cancer causation, prevention, therapy, and education. What is new in this edition? The fifth edition, guided by the WHO Classification of Tumours Editorial Board, will establish a single coherent cancer classification presented across a collection of individual volumes organized on the basis of anatomical site (digestive system, breast, soft tissue and bone, etc.) and structured in a systematic manner, with each tumor type listed within a taxonomic classification: site, category, family (class), type, and subtype. In each volume, the entities are now listed from benign to malignant and are described under an updated set of headings, including histopathology, diagnostic molecular pathology, staging, and easy-to-read essential and desirable diagnostic criteria. Who should read this book? - Pathologists - Oncologists - Gastroenterologists - Cancer researchers - Epidemiologists - Cancer registrars This volume: - Prepared by 168 authors and editors - Contributors from 22 countries - More than 1000 high-quality images - More than 3700 references

The Shameful State Sony Labou Tansi 2016-01-03 Set in a fictitious African nation, this novel by the distinguished writer Sony Labou Tansi takes aim at the corruption, degeneracy, violence, and repression of political life in Africa. At the heart of *The Shameful State* is the story of Colonel Martillimi Lopez, the nation's president, whose eccentricity and whims epitomize the "shameful situation in which humanity has elected to live." Lopez stages a series of grotesque and barbaric events while his nation falls apart. Unable to resist the dictator's will, his desperate citizens are left with nothing but humiliation. The evocation of this deranged world is a showcase for the linguistic and stylistic inventiveness that are the hallmark of Sony Labou Tansi's work. This first English translation by Dominic Thomas includes a foreword by Congolese writer Alain Mabanckou that contextualizes the novel's importance in literary history and the significance of Sony Labou Tansi for future generations of writers.

Women and Health World Health Organization 2009 Despite considerable progress in the past decades, societies continue to fail to meet the health care needs of women at key moments of their lives, particularly in their adolescent years and in older age. These are the key findings of the WHO report *Women and health: today's evidence tomorrow's agenda*. WHO calls for action both within the health sector and beyond to improve the health and lives of girls and women around the world, from birth to older age. The report provides the latest and most comprehensive evidence available to date on women's specific needs and health challenges over their entire life-course. The report includes the latest global and regional figures on the health and leading causes of death in women from birth, through childhood, adolescence and adulthood, to older age.-- Publisher's description.

Cancer Prevention II Hans-Jörg Senn 2008-11-28 More than 180 participants and experts from 31 countries met for the fifth time in 10 years in St. Gallen, Switzerland for a 3-day conference to discuss important current issues of clinical cancer prevention. The meeting was again organized and co-sponsored by St. Gallen Oncology Conferences (SONK). While SONK has been extremely successful in organizing large international congresses on "Primary Therapy of Early Breast Cancer" as well as "Supportive Care in Cancer" for more than 20 years, the idea of promoting interdisciplinary, clinically oriented meetings on cancer prevention is a more recent and not yet generally accepted and widespread concept in modern oncology. Since today's medical expenses are soaring and medical research budgets are stagnating or even being cut, neither politicians nor industry is willing to risk an additional unpredictable channel of expenses, such as that demanded by clinical cancer prevention efforts! In Switzerland—and we fear in many other parts of the globe—some 97%–98% or even a greater percentage of health budgets is spent for curative and palliative/rehabilitative medicine. Since a meager 2%–3% of national health budgets is for preventive medicine, even less than that proportion is specifically allocated for cancer prevention. When the money for "curing and caring" for the diseased populace runs short, there is likely not much left for partly controversial disease prevention in the (still) healthy part of the population.

Ticks Alan S. Bowman 2008-12-04 Widespread and increasing resistance to most available acaracides threatens both global livestock industries and public health. This necessitates better understanding of ticks and the diseases they transmit in the development of new control strategies. *Ticks: Biology, Disease and Control* is written by an international collection of experts and covers in-depth information on aspects of the biology of the ticks themselves, various veterinary and medical tick-borne pathogens, and aspects of traditional and potential new control methods. A valuable resource for graduate students, academic researchers and professionals, the book covers the whole gamut of ticks and tick-borne diseases from microsatellites to satellite imagery and from exploiting tick saliva for therapeutic drugs to developing drugs to control tick populations. It encompasses the variety of interconnected fields impinging on the economically important and biologically fascinating phenomenon of ticks, the diseases they transmit and methods of their control.

The Book of Job Louis de Bernières 1999-01-01 Suffering in an unjust world is the theme of this book. God punishes Job, a wealthy and pious man, after giving an assertion to Satan that his subject will never curse him. It goes on to explain why Job has suffered, raising ethical questions about the nature of divinity. The text is introduced by author Louis de Bernieres

Cerebral Sphingolipidoses Stanley M. Aronson 2013-10-22 *Cerebral Sphingolipidoses: A Symposium on Tay-Sach's Disease and Allied Disorders* is a collection of papers presented at the 1961 Symposium on the Cerebral Sphingolipidoses, held in Isaac Albert Research Institute of the Jewish Chronic Disease Hospital and the Downstate Medical Center of the State University of New York. The contributors demonstrate the significance attached to an intensive study of Tay-Sach's and allied diseases. A unique feature of the Symposium was the constant awareness of the clinical implications of the fundamental studies presented. This book is organized into three sections encompassing 30 chapters. The first part deals with the morphological aspects of cerebral lipidoses, including the diagnosis, biopsy, pathology, and clinical features of these diseases. This part also provides case reports of specific cerebral sphingolipidoses. The second part highlights the biochemical aspects of Tay-Sach's and allied disorders. This part specifically looks into the mechanism of abnormal lipid metabolism, chemical pathology of lipids, and quantitative fractionation of complex lipid mixtures. This part also considers the characterization of accumulated gangliosides in brain, which is one the most striking features in infantile amaurotic idiocy, a type of Tay-Sach's disease. The third part explores the genetic and therapeutic aspects of the sphingolipidoses. This book will be of value to lipid chemists, geneticists,

biochemists, neuropathologists, and clinicians.

Cancer and Nutrition Roslyn B. Alfin-Slater 2013-11-11 The role of nutrition in neoplasia has been of longstanding concern. The subject was addressed by investigators in the first decade of this century, but was dropped. Vigorous attention was paid to this area of oncology in the 1940s, primarily due to the efforts of Dr. A. Tannenbaum at the Michael Reese Hospital in Chicago and the group at the University of Wisconsin in Madison. However, interest waned again until the 1970s when the question of diet and cancer was addressed and it has since been at the forefront of cancer research. The present volume (7) of *Human Nutrition: A Comprehensive Treatise* summarizes current knowledge in the area of nutrition and cancer. The first chapter is an overview written by John Higginson, whose contribution to understanding of cancer and nutrition spans several decades. The next essays cover epidemiology and physiology. The ensuing chapters address, in tum, those dietary factors relating to nutrition and cancer, namely, carbohydrates, protein, fat, cholesterol, calories, lipotropics, fiber, fruits and vegetables, vitamins, and alcohol. In a field moving as rapidly as this one is now, we can expect to miss a few late-breaking developments, but generally, the literature has been well covered through some time in 1988. Work relating to the effects of diet on oncogenes is in its very early development and has not been addressed as an entity per se.

A Treatise on the Membranes in General Xavier Bichat 1813

The Rejection of Consequentialism Samuel Scheffler 1994-08-11 In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this

book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

My Cocaine Museum Michael Taussig 2009-12-19 In this book, a make-believe cocaine museum becomes a vantage point from which to assess the lives of Afro-Colombian gold miners drawn into the dangerous world of cocaine production in the rain forest of Colombia's Pacific Coast. Although modeled on the famous Gold Museum in Colombia's central bank, the Banco de la República, Taussig's museum is also a parody aimed at the museum's failure to acknowledge the African slaves who mined the country's wealth for almost four hundred years. Combining natural history with political history in a filmic, montage style, Taussig deploys the show-and-tell modality of a museum to engage with the inner life of heat, rain, stone, and swamp, no less than with the life of gold and cocaine. This effort to find a poetry of words becoming things is brought to a head by the explosive qualities of those sublime fetishes of evil beauty, gold and cocaine. At its core, Taussig's museum is about the lure of forbidden things, charged substances that transgress moral codes, the distinctions we use to make sense of the world, and above all the conventional way we write stories.
