Forces of Nature Barry A. Vann 2012-03-20 As long as the human species has existed, men and women have had to contend with the unpredictable forces of nature. Geographer Barry A. Vann brings a unique perspective to this age-old struggle in this illuminating overview of human population shifts and their precarious relationship with climate change and geography. Vann takes us on a journey along the migration routes of the earliest modern humans and tells why our ancestors chose to settle down in places that can be best described as natural utopias. In the religiously oriented worldview of ancient peoples, such places took on a sacred aura of divine favor. Similarly, destructive events such as volcanic eruptions and earthquakes were interpreted as expressions of divine wrath. Vann shows how the ancient texts of the Bible and the Qur'an offer glimpses of past climates that were distinctly different from the climate of our time. He also discusses the rise of technology as a means of controlling the threatening features of the natural world. Though technology has enabled humanity to cope with hostile climates, it has also created a false sense of security. Vann

notes that population clusters are increasing in dangerous areas and that no technology can protect vulnerable groups from major-category hurricanes, tornadoes, or earthquakes. Finally, he considers our current anxieties regarding global warming, pointing out that this focus has obscured a good deal of historical and geological evidence for a return of another ice age. *The Forces of Nature* offers a challenging perspective on the precarious balance between fragile human communities and their often-threatening environments.

Australian Vegetation David A. Keith 2017-06-15 *Australian Vegetation* has been an essential reference for students and researchers in botany, ecology and natural resource management for over 35 years. Now fully updated and with a new team of authors, the third edition presents the latest insights on the patterns and processes that shaped the vegetation of Australia. The first part of the book provides a synthesis of ecological processes that influence vegetation traits throughout the continent, using a new classification of vegetation. New chapters examine the influences of climate, soils, fire regimes, herbivores and aboriginal people on vegetation, in addition to completely revised chapters on evolutionary biogeography, quaternary vegetation history and alien plants. The book's second half presents detailed ecological portraits for each major vegetation type and offers data-rich perspectives and comparative analysis presented in tables, graphs, maps and colour illustrations. This authoritative book will inspire readers to learn and explore first-hand the vegetation of Australia.
