Fostering Healthy Mental, Emotional, and Behavioral Development in Children and Youth  
National Academies of Sciences, Engineering, and Medicine (U.S.). Committee on Fostering Healthy Mental, Emotional, and Behavioral Development Among Children and Youth 2019  
"Healthy mental, emotional, and behavioral (MEB) development is a critical foundation for a productive adulthood. Much is known about strategies to support families and communities in strengthening the MEB development of children and youth, by promoting healthy development and also by preventing and mitigating disorder, so that young people reach adulthood ready to thrive and contribute to society. Over the last decade, a growing body of research has significantly strengthened understanding of healthy MEB development and the factors that influence it, as well as how it can be fostered. Yet, the United States has not taken full advantage of this growing knowledge base. Ten years later, the nation still is not effectively mitigating risks for poor MEB health outcomes; these risks remain prevalent, and available data show no significant reductions in their prevalence. Fostering Healthy Mental, Emotional, and Behavioral Development in Children and Youth: A National Agenda examines the gap between current research and achievable national goals for the next ten years. This report identifies the complexities of childhood influences and highlights the need for a tailored approach when implementing new policies and practices. This report provides a framework for a cohesive, multidisciplinary national approach to improving MEB health"--Publisher's description

**Opportunities for Improving Programs and Services for Children with Disabilities** National Academies of Sciences, Engineering, and Medicine 2018-07-06 Although the general public in the United States assumes children to be generally healthy and thriving, a substantial and growing number of children have at least one chronic health condition. Many of these conditions are associated with disabilities and interfere regularly with children's usual activities, such as play or leisure activities, attending school, and engaging in family or community activities. In their most severe forms, such disorders are serious lifelong threats to children's social, emotional well-being and quality of life, and anticipated adult outcomes such as for employment or independent living. However, pinpointing the prevalence of disability among children in the U.S. is difficult, as conceptual frameworks and definitions of disability vary among federal programs that provide services to this population and national surveys, the two primary sources for prevalence data. Opportunities for Improving Programs and Services for Children with Disabilities provides a comprehensive analysis of health outcomes for school-aged children with disabilities. This report reviews and assesses programs, services, and supports available to these children and their families. It also describes overarching program, service, and treatment goals; examines outreach efforts and utilization rates; identifies what outcomes are measured and how they are reported; and describes what is known about the effectiveness of these programs and services.

*Vibrant and Healthy Kids* National Academies of Sciences, Engineering, and Medicine 2019-12-27 Children are the foundation of the United States, and supporting them is a key component of building a successful future. However, millions of children face health inequities that compromise their development, well-being, and long-term outcomes, despite substantial scientific evidence about how those adversities contribute to poor health. Advancements in neurobiological and socio-behavioral science show that critical biological systems develop in the prenatal through early childhood periods, and neurobiological development is extremely responsive to environmental influences during these stages. Consequently, social, economic, cultural, and environmental factors significantly affect a child's health ecosystem and ability to thrive throughout adulthood. *Vibrant and Healthy Kids: Aligning Science, Practice, and Policy to Advance Health Equity* builds upon and updates research from *Communities in Action: Pathways to Health Equity* (2017) and *From Neurons to Neighborhoods: The Science of Early Childhood Development* (2000). This report provides a brief overview of stressors that affect childhood development and health, a framework for applying current brain and development science to the real world, a roadmap for implementing tailored interventions, and recommendations about improving systems to better align with our understanding of the significant impact of health equity.

*A Call to Action* Jimmy Carter 2014-03-25 In the highly acclaimed bestselling *A Call to Action*, President Jimmy Carter addresses the world's most serious, pervasive, and ignored violation of basic human rights: the ongoing discrimination and violence against women and girls. President Carter was encouraged to write this book by a wide coalition of leaders of all faiths. His urgent report covers a system of discrimination that extends to every nation. Women are deprived of equal opportunity in wealthier nations and "owned" by men in others, forced to suffer servitude, child marriage, and genital cutting. The most vulnerable and their children are trapped in war and violence. *A Call to Action* addresses the suffering inflicted upon women by a false interpretation of carefully selected religious texts and a growing tolerance of violence and warfare. Key verses are often omitted or quoted out of context by male religious leaders to exalt the status of men and exclude women. And in nations that accept or even glorify violence, this perceived inequality becomes the basis for abuse. Carter draws upon his own experiences and the testimony of courageous women from all regions and all major religions to demonstrate that women around the world, more than half of all human beings, are being denied equal rights. This is an informed and passionate charge about a devastating effect on economic prosperity and unconscionable human suffering. It affects us all.

Child Health Care Nursing B. Carter 1995-11-06 The implementation of Project 2000 and degree level courses in paediatrics, together with the development of the child branch with its emphasis on the equal values of health promotion, community care and acute care, has produced enormous changes in the needs and contexts of nurses caring for children. This accessible book provides an overview of these - with a particular focus on ways in which nurses can deliver holistic care - and challenges the reader to assess his or her own knowledge and attitudes in all aspects of child care. Strong emphasis is placed on the needs of the child and family. This is illustrated by the inclusion of interviews with children and their families

about their feelings in respect to their needs.

**Children's Health, the Nation's Wealth** Institute of Medicine 2004-10-18 Children's health has clearly improved over the past several decades. Significant and positive gains have been made in lowering rates of infant mortality and morbidity from infectious diseases and accidental causes, improved access to health care, and reduction in the effects of environmental contaminants such as lead. Yet major questions still remain about how to assess the status of children's health, what factors should be monitored, and the appropriate measurement tools that should be used. *Children's Health, the Nation's Wealth: Assessing and Improving Child Health* provides a detailed examination of the information about children's health that is needed to help policy makers and program providers at the federal, state, and local levels. In order to improve children's health-and, thus, the health of future generations-it is critical to have data that can be used to assess both current conditions and possible future threats to children's health. This compelling book describes what is known about the health of children and what is needed to expand the knowledge. By strategically improving the health of children, we ensure healthier future generations to come.

Handbook of Child and Adolescent Outpatient, Day Treatment and Community Psychiatry Harinder S. Ghuman 1998 In the past few years, there has been a major shift in the mental health care of child and adolescents from inpatient care to non-hospital community ambulatory settings. Economic pressures have primarily driven this change in service delivery. Insurance companies and managed care organizations have not only restricted access to hospitalization and limited length of stays but additionally have sharply reduced reimbursements for treatments. State and federal policies for inpatient treatment and reimbursement have followed similar trends. As a result, mental health planners have attempted to develop programs to deal with this trend of restricted inpatient care shifting treatment of children and adolescents to home and community settings. Some of these new programs are well planned and others are hastily planned and implemented. The pitfall to this community approach is that there is a population of chronically disturbed children and adolescents, and highly stressed parents often lacking adequate personal and family resource who may not respond to these new less restrictive, less costly community approaches which potentially may lead to an unsafe and dangerous situation for the child, adolescent, family and the community. With this in mind, the purpose of this book is to provide comprehensive and up-to-date information regarding child and adolescent outpatient, day treatment and community psychiatry. The emphasis of this book is to provide practical knowledge through clinical case illustrations and to explain various strategies in a detailed fashion.

**The Health Workforce in Ethiopia** Berhanu Feysia 2012-01-12 Health indicators particularly on child health and malaria in Ethiopia have improved significantly in recent years, with the next challenge now focused on improving maternal health indicators. Improvements in Child health and Malaria in particular can be attributed to strong government commitment towards health results in the country, reflected in a number of notable policies and programs related to Human Resources for Health (HRH), in particular the health extension worker program. However, indicators related to maternal health, remain problematic. Ethiopia has one of the lowest levels of assisted deliveries in the region. Although increases in the number of health workers particularly in rural areas may have contributed to improving access to some health services, it is in the government's interest to further improve the stock, distribution and performance of relevant health workers in Ethiopia, particularly to bring about improvement in access to maternal health services for the poor. This document reviews the current HRH situation in Ethiopia, summarizes the evidence on population use of select health services, and offers relevant policy options to assist the government finalize its new Human Resources Strategy and address remaining health challenges.

Parenting Matters National Academies of Sciences, Engineering, and Medicine 2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

**Communities in Action** National Academies of Sciences, Engineering, and Medicine 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

*Epilepsy Across the Spectrum* Institute of Medicine 2012-07-29 Although epilepsy is one of the nation's most common neurological disorders, public understanding of it is limited. Many

people do not know the causes of epilepsy or what they should do if they see someone having a seizure. Epilepsy is a complex spectrum of disorders that affects an estimated 2.2 million Americans in a variety of ways, and is characterized by unpredictable seizures that differ in type, cause, and severity. Yet living with epilepsy is about much more than just seizures; the disorder is often defined in practical terms, such as challenges in school, uncertainties about social situations and employment, limitations on driving, and questions about independent living. The Institute of Medicine was asked to examine the public health dimensions of the epilepsies, focusing on public health surveillance and data collection; population and public health research; health policy, health care, and human services; and education for people with the disorder and their families, health care providers, and the public. In *Epilepsy Across the Spectrum*, the IOM makes recommendations ranging from the expansion of collaborative epilepsy surveillance efforts, to the coordination of public awareness efforts, to the engagement of people with epilepsy and their families in education, dissemination, and advocacy for improved care and services. Taking action across multiple dimensions will improve the lives of people with epilepsy and their families. The realistic, feasible, and action-oriented recommendations in this report can help enable short- and long-term improvements for people with epilepsy. For all epilepsy organizations and advocates, local, state, and federal agencies, researchers, health care professionals, people with epilepsy, as well as the public, *Epilepsy Across the Spectrum* is an essential resource.
