The Mercury 13 Martha Ackmann 2004-07-13 For readers of The Astronaut Wives Club, The Mercury 13 reveals the little-known true story of the remarkable women who trained for NASA space flight. In 1961, just as NASA launched its first man into space, a group of women underwent secret testing in the hopes of becoming America's first female astronauts. They passed the same battery of tests at the legendary Lovelace Foundation as did the Mercury 7 astronauts, but they were summarily dismissed by the boys' club at NASA and on Capitol Hill. The USSR sent its first woman into space in 1963; the United States did not follow suit for another twenty years. For the first time, Martha Ackmann tells the story of the dramatic events surrounding these thirteen remarkable women, all crackerjack pilots and patriots who sometimes sacrificed jobs and marriages for a chance to participate in America's space race against the Soviet Union. In addition to talking extensively to these women, Ackmann interviewed Chuck Yeager, John Glenn, Scott Carpenter, and others at NASA and in the White House with firsthand knowledge of the program, and includes here never-before-seen photographs of the Mercury 13 passing their Lovelace tests. Despite the crushing disappointment of watching their dreams being derailed, the Mercury 13 went on to extraordinary achievement in their lives: Jerrie Cobb, who began flying when she was so small she had to sit on pillows to see out of the cockpit, dedicated her life to flying solo missions to the Amazon rain forest; Wally Funk, who talked her way into the Lovelace trials, went on to become one of the first female FAA investigators; Janey Hart, mother of eight and, at age forty, the oldest astronaut candidate, had the political savvy to steer the women through congressional hearings and later helped found the National Organization for Women. A provocative tribute to these extraordinary women, The Mercury 13 is an unforgettable story of determination, resilience, and inextinguishable hope.

Summits and Secrets Kurt Diemberger 2019-03-08 'A book grows rather like a snow crystal. One doesn't write it from start to finish but, in greater or less degree, all at the same time ... that is why my book is not in chronological order; for everything is of the present, held in the moment when thought captures it.' Kurt Diemberger's Summits and Secrets is a mountaineering autobiography like no other. Writing anecdotally, Diemberger provides an abstract look into his life and climbing career that is both fascinating and awe-inspiring to navigate. Known for surviving the 1986 K2 disaster - an account described in harrowing detail in his award-winning book The Endless Knot - Diemberger provides a captivating insight into his earlier climbs in Summits and Secrets. From climbing his first peak in the Tyrol mountains of Austria, to the epoch-making first ascent of Broad Peak with Hermann Buhl in 1957, and then summiting Dhaulagiri in 1960, where he became one of only two people to have made first ascents of two mountains over 8,000 metres, Diemberger recounts his experiences with wit, honesty and an infectious enthusiasm: 'Every climber knows the thrill ... the unique inexplicable tension, which the regular shapes of the mountain world awake in him: huge pyramids, enormous rectangular slabs, piled-

up triangles of rock, white circles, immense squares – the thrill of simplicity of shape and outline and the excitement of mastering them, to an unbelievable extent, by his own efforts, his own power ... ' Summits and Secrets is a must-read for those wanting an insight into the life and achievements of one of the toughest high-altitude climbers the world has ever known.

The Accidental Ali Smith 2007-04-10 Filled with the bestselling, award-winning author's trademark wordplay and inventive storytelling, here is the dizzyingly entertaining, wickedly humorous story of a mysterious stranger whose sudden appearance during a family's summer holiday transforms four variously unhappy people. Each of the Smarts—parents Eve and Michael, son Magnus, and the youngest, daughter Astrid—encounter Amber in his or her own solipsistic way, but somehow her presence allows them to see their lives (and their life together) in a new light. Smith's narrative freedom and exhilarating facility with language propel the novel to its startling, wonderfully enigmatic conclusion.

Beyond Possible Nimsdai Purja 2021-01-27 Fourteen mountains on Earth tower over 8,000 metres above sea level, an altitude where the brain and body withers and dies. Until recently, the world record for climbing them all stood at nearly eight years. So I announced I was summiting them in under seven months. People laughed. They told me I was crazy, even though I'd sharpened my climbing skills on the brutal Himalayan peaks of Everest and Dhaulagiri. But I possessed more than enough belief, strength and resilience to nail the job, having taken down enemy gunmen and terrorist bomb makers while serving with the Gurkhas and the UK Special Forces.

Space Below My Feet Gwen Moffat 2013-11-07 A classic mountaineering memoir by one of the UK's foremost female climbers. 'A story of climbing and compulsive love of mountains ... magnificent' OBSERVER In 1945, when Gwen Moffat was in her twenties, she deserted from her post as a driver and dispatch rider in the Army and went to live rough in Wales and Cornwall, climbing and living on practically nothing. She hitch-hiked her way around, travelling from Skye to Chamonix and many places in between, with all her possessions on her back, although these amounted to little more than a rope and a sleeping bag. When the money ran out, she worked as a forester, went winkle-picking on the Isle of Skye, acted as the helmsman of a schooner and did a stint as an artist's model. And always there were the mountains, drawing her away from a 'proper' job. Throughout this unique story, there are acutely observed accounts of mountaineering exploits as Moffat tackles the toughest climbs and goes on to become Britain's leading female climber - and the first woman to qualify as a mountain guide.

greatest alpinists of all time. Born in 1947, he was one of the leading lights of the Polish golden age of Himalayan climbing. His visionary approach to climbing resulted in many renowned ascents, such as the complete Broad Peak traverse, the "night naked" speed climbs of Cho Oyu and Shishapangma and, above all, the alpine-style ascent of the West Face of Gasherbrum IV. Dubbed the "climb of the century," his route on G IV, as of 2016, has yet to be repeated. His most frequent climbing partners were alpine legends of their time: Polish Himalayan climber Jerzy Kukuczka, Swiss mountain guide Erhard Loretan and British alpinist Alex MacIntyre. After repeated requests to accept the Piolet d'Or lifetime achievement award (the Academy Award of the climbing world), Kurtyka finally accepted the honour in the spring of 2016. A fiercely private individual, he continues to decline countless invitations for interviews, lectures and festival appearances, but has agreed to co-operate with internationally renowned and award winning Canadian author Bernadette McDonald on this long-awaited biography. Certain to be a major event in the climbing world, Art of Freedom will appeal to all readers who dream of mountain landscapes and those who long to touch the sky.

The Last Step (Legends & Lore edition) Rick Ridgeway 2014-02-14 [CLICK HERE](#) to download a sample from *The Last Step* * A mountaineering classic * Conflict, hardship, endurance, triumph -- it's all here in Ridgeway's extraordinary story In September 1978, Rick Ridgeway, Jim Wickwire, Lou Reichardt and John Roskelley stood atop K2, the first Americans ever to achieve this victory. Under the leadership of Jim Whittaker, they and their teammates had spent 67 days on the mountain, nearly all of them above 18,000 feet, where the stresses of high-altitude living, of monotonous food, of confinement in tiny tents for day after day of frustrating storms had worn them down to the core. *The Last Step* is Rick Ridgeway's inside story of this extraordinary expedition. It's about the people who, battered by the mountain and their isolation, overcame their individual fears, desire, and disappointments to work together to get somebody—anybody—to the top of K2. It's about the glorious success the team achieved, and about the perilous bivouac Jim Wickwire spent just below the summit without food, oxygen or shelter in temperatures of -40F.

The Last Winter Porter Fox 2021-11-02 One man's "curiously thrilling joyride" of travelogue, history, and climatology, across a planet on the brink of cataclysmic transformation (Donovan Hohn). As the planet warms, winter is shrinking. In the last fifty years, the Northern Hemisphere lost a million square miles of spring snowpack and in the US alone, snow cover has been reduced by 15-30%. On average, winter has shrunk by a month in most northern latitudes. In this deeply researched, beautifully written, and adventure-filled book, journalist Porter Fox travels along the edge of the Northern Hemisphere's snow line to track the scope of this drastic change, and how it will literally change everything—from rapid sea level rise, to fresh water scarcity for two billion people, to massive greenhouse gas emissions from thawing permafrost, and a half dozen climate tipping points that could very well spell the end of our world. This original research is animated by four harrowing and illuminating journeys—each grounded by interviews with idiosyncratic, charismatic experts in their respective fields and Fox's own narrative of growing up on a remote island in Northern Maine. Timely, atmospheric, and expertly investigated, *The Last Winter* will showcase a shocking and unexpected casualty of climate change—that may well set off its own unstoppable warming cycle.

The Adventure Gap James Edward Mills 2014-09-24 • Chronicles the first all-African American summit attempt on Denali, the highest point in North America • Part adventure story, part history, and part argument for the importance of inspiring future generations to value nature The nation's wild places—from national and state parks to national forests, preserves, and wilderness areas—belong to all Americans. But not all of us use these resources equally. Minority populations are much less likely to seek recreation, adventure, and solace in our wilderness spaces. It's a difference that African American author James Mills addresses in his new book, *The Adventure Gap: Changing the Face of the Outdoors*. Bridging the so-called "adventure gap" requires role models who can inspire the uninitiated to experience and enjoy wild places. Once new visitors are there, a love affair often follows. This is important because as our country grows increasingly multicultural, our natural legacy will need the devotion of people of all races and ethnicities to steward its care. In 2013, the first all-African American team of climbers, sponsored by the National Outdoor Leadership School (NOLS), challenged themselves on North America's highest point, the dangerous and forbidding Denali, in Alaska. Mills uses Expedition Denali and its team members' adventures as a jumping-off point to explore how minority populations view their place in wild environments and to share the stories of those who have already achieved significant accomplishments in outdoor adventures—from Mathew Henson, a Black explorer who stood with Peary at the North Pole, to Kai Lightner, a teenage sport climber currently winning national competitions. The goal of the expedition, and now the book, is to inspire minority communities to look outdoors for experiences that will enrich their lives, and to encourage them toward greater environmental stewardship.

where the cover is slightly different from the Mountaineers Books U.S. edition * Behind the Iron Curtain, Cold War mountaineers found freedom on the world's highest peaks—and paid an awful price to achieve it * Winner of the Boardman-Tasker Prize, Banff Grand Prize, and American Alpine Club Literary Award Freedom Climbers tells the story of Poland's truly remarkable mountaineers who dominated Himalayan climbing during the period between the end of World War II and the start of the new millennium. The emphasis here is on their "golden age" in the 1980s and 1990s when, despite the economic and social baggage of their struggling country, Polish climbers were the first to tackle the world's highest mountains during winter, including the first winter ascents on seven of the world's fourteen 8000-meter peaks: Everest, Manaslu, Dhaulagiri, Cho Oyu, Kanchenjunga, Annapurna, and Lhotse. Such successes, however, came at a serious cost: 80 percent of Poland's finest high-altitude climbers died on the high mountains during the same period they were pursuing these first ascents. Award-winning writer Bernadette McDonald addresses the social, political, and cultural context of this golden age, and the hardships of life under Soviet rule. Polish climbers, she argues, were so tough because their lives at home were so tough—they lost family members to World War II and its aftermath and were so much more poverty-stricken than their Western counterparts that they made much of their own climbing gear. While Freedom Climbers tells the larger story of an era, McDonald shares charismatic personal narratives such as that of Wanda Rutkiewicz, expected to be the first woman to climb all 8000-meter peaks until she disappeared on Kanchenjunga in 1992; Jerzy Kukuczka, who died in a fall while attempting the south face of Lhotse; and numerous other renowned climbers including Voytek Kurtyka, Artur Hajzer, Andrej Zawaka, and Krzysztof Wielicki. This is a fascinating window into a different world, far-removed from modernity yet connected by the strange allure of the mountain landscape, and a story of inspiring passion against all odds. Permafrost Soils Rosa Margesin 2008-10-31 Most of the Earth's biosphere is characterized by low temperatures. Vast areas (>20%) of the soil ecosystem are permanently frozen or are unfrozen for only a few weeks in summer. Permafrost regions occur at high latitudes and also at high elevations; a significant part of the global permafrost area is represented by mountains. Permafrost soils are of global interest, since a significant increase in temperature is predicted for polar regions. Global warming will have a great impact on these soils, especially in northern regions, since they contain large amounts of organic carbon and act as carbon sinks, and a temperature increase will result in a release of carbon into the atmosphere. Additionally, the intensified release of the climate-relevant tracer gas methane represents a potential environmental hazard. Significant numbers of viable microorganisms, including bacteria, archaea, phototrophic cyanobacteria and green algae, fungi and protozoa, are present in permafrost, and the characteristics of these microorganisms reflect the unique and extreme conditions of the permafrost environment. Remarkably, these microorganisms have been reported to be metabolically active at subzero temperatures, even down to -20°C .

Himalaya: A Human History Ed Douglas 2021-01-05 A magisterial history of the Himalaya: an epic story of peoples, cultures, and adventures among the world's highest mountains. For centuries, the unique and astonishing geography of the Himalaya has attracted those in search of spiritual and literal elevation: pilgrims, adventurers, and mountaineers seeking to test themselves among the world's most spectacular and challenging peaks. But far from being wild and barren, the Himalaya has been home to a diversity of indigenous and local cultures, a crucible of world religions, a crossroads for trade, and a meeting point and conflict zone for empires past and present. In this landmark work, nearly two decades in the making, Ed Douglas makes a thrilling case for the Himalaya's importance in global history and offers a soaring account of life at the "roof of the world." Spanning millennia, from the earliest inhabitants to the present conflicts over Tibet and Everest, Himalaya explores history, culture, climate, geography, and politics. Douglas profiles the great kings of Kathmandu and Nepal; he describes the architects who built the towering white Stupas that distinguish Himalayan architecture; and he traces the flourishing evolution of Hinduism, Islam, and Buddhism that brought Himalayan spirituality to the world. He also depicts with great drama the story of how the East India Company grappled for dominance with China's emperors, how India fought Mao's Communists, and how mass tourism and ecological transformation are obscuring the bloody legacy of the Cold War. Himalaya is history written on the grandest yet also the most human scale—encompassing geology and genetics, botany and art, and bursting with stories of courage and resourcefulness.
