Unriddling the Exeter Riddles Patrick J. Murphy 2011-03-21 The vibrant and enigmatic Exeter Riddles (ca. 960-980) are among the most compelling texts in the field of medieval studies, in part because they lack textually supplied solutions. Indeed, these ninety-five Old English riddles have become so popular that they have even been featured on posters for the London Underground and have inspired a sculpture in downtown Exeter. Modern scholars have responded enthusiastically to the challenge of solving the Riddles, but have generally examined them individually. Few have considered the collection as a whole or in a broader context. In this book, Patrick Murphy takes an innovative approach, arguing that in order to understand the Riddles more fully, we must step back from the individual puzzles and consider the group in light of the textual and oral traditions from which they emerged. He offers fresh insights into the nature of the Exeter Riddles' complexity, their intellectual foundations, and their lively use of metaphor.

Digital Dice Paul J. Nahin 2013-03-24 Some probability problems are so difficult that they stump the smartest mathematicians. But even the hardest of these problems can often be solved with a computer and a Monte Carlo simulation, in which a random-number generator simulates a physical process, such as a million rolls of a pair of dice. This is what Digital Dice is all about: how to get numerical answers to difficult probability problems without having to solve complicated mathematical equations. Popular-math writer Paul Nahin challenges readers to solve twenty-one difficult but fun problems, from determining the odds of coin-flipping games to figuring out the behavior of elevators. Problems build from relatively easy (deciding whether a dishwasher who breaks most of the dishes at a restaurant during a given week is clumsy or just the victim of randomness) to the very difficult (tackling branching processes of the kind that had to be solved by Manhattan Project mathematician Stanislaw Ulam). In his characteristic style, Nahin brings the problems to life with interesting and odd historical anecdotes. Readers learn, for example, not just how to determine the optimal stopping point in any selection process but that astronomer Johannes Kepler selected his second wife by interviewing eleven women. The book shows readers how to write elementary computer codes using any common programming language, and provides solutions and line-by-line walk-throughs of a MATLAB code for each problem. Digital Dice will appeal to anyone who enjoys popular math or computer science. In a new preface, Nahin wittily addresses some of the responses he received to the first edition.

God and Evolution: Creativity In Action Jock Abra 2015-01-20 Atheism, this book argues, is unbelievable. The universe's wonders couldn't have come about by chance. Natural selection alone doesn't produce evolution. Therefore since evolution resembles the creative process, especially in using trial-and-error, God's creative activity is responsible and human creators reveal much about him. However that process is goal directed, so evolution must be as well. But the goal a Picasso or Darwin pursues is vague. They don't know exactly where they're going and make mistakes and so therefore must God. Thus Abra rejects the perfect God assumed by many religions and Intelligent Design. Why bring back God? To restore meaning and purpose to existence and faith's many benefits. To better

explain how the universe, scientific laws and life itself came about, and living things' attractive but useless properties. Other discussions clarify both creativity and the creative God. Is there one kind of creativity or many? A sex difference? Are creators neurotic?

The Legend of Mighty Mabel Vance Avis 2011-08-03 In the distance, the ominous rumblings of thunder can be heard while a dark drizzle begins to fall on a dreary summer afternoon that makes no sunny pretenses about what is coming. Albert is at Professor Charles' house for a high-energy physics lesson when a friend bearing a high-energy piece of bad news bursts through the doorway. The news relates to the murder of a dear friend a week ago and what Albert saw on that foggy night, "There was a ghostly figure wielding a sword in a rowboat near the scene of the riverbank killing." Prof Charles quickly states, "Albert, there is a sword in a diabolically haunted mansion not far from here. The mansion was owned by a rich man who was so sinister that many considered him to be the Devil incarnate, and he was referred to as 'The Sovereign of Sin.' Upon his death, several morbidly evil spirits hastily escaped to various rooms of the mansion. In one of those rooms is a knight with a sword. But the mansion is confusing in its construction, and those brave enough to have entered it while being stalked by rattling chains cannot agree on where the room is." Albert's girlfriend, Molly, has just arrived. Molly's mother, Mabel, is a revered teacher, and she often helps Albert by telling him her "Lessons of Life": "Sometimes ideas that have become part of our entrenched assumptions need to be looked at again. Reexamine all your assumptions, even those you find irrefutable, and relook at clues you have been unable to fit into any assumption. Perhaps that will lead you in new directions." The news of a sword accessible to the murderer gives Albert and Molly a new clue to follow. Molly considers finding the killer their higher calling, and Albert follows clues with the enthusiasm and perspicacity of Sherlock Holmes. They start their journey with trepidation. The densely tree-surrounded path to the haunted mansion begins surreally serene given that its destination is the home of The Sovereign of Sin. Only the storm clouds and the heavy mist add a subtle version of reality, which precedes the more demanding version that occurs when a huge lightning strike hits nearby. The closer Albert and Molly get to the haunted mansion, the more the path takes on the threatening encompassment of their goal. The trees and thick overgrowth turn into strangely evil forms as they become darkly shadowed and more impenetrable, and the sky fills with ghost-shaped, black rain clouds that close in on Molly and Albert and move and morph and forebode the fast-approaching, ill-omened night. Then another massive lightning strike with its bone-rattling thunder shakes Molly and Albert's nerves raw. "Did you see that?" exclaims Albert terrifyingly as he points up to a spot in one of the trees ahead of them. "See what?" asks Molly worriedly. "During the lightning, up in that tree I saw something staring at us," anxiously responds Albert. "It was the form of a ghost, which looked to me like one of the morbidly wicked spirits that The Sovereign of Sin turned into upon his death." As they slowly walk past the tree, each stares up at the spot; then another lightning flash occurs, and instantaneously both their expressions turn ghostly fear-stricken. They run past the tree. Albert exclaims, "So you saw The Sovereign of Sin's malevolent spirit?" "No," cries Molly. "I saw the Grim Reaper reaching out to grab me!" "Great ghouls!" declares Albert. "Aren't we two, with our spine-chilling imaginations, going to have fun in the haunted mansion!" Albert and Molly have many grand adventures in store for them as they follow clues to a killer lurking near the rich waters of the grand ol' river and its lush surrounding forest. The Legend of Mighty Mabel is the story of a summer of wonderful joy, great adventures, scary fun, fun for the sake of fun, and a bit of romance. And it is the story of the bravery, the love, and the "Lessons of Life" of Mighty Mabel.

The Bakhtin Circle and Ancient Narrative Robert Bracht Branham 2005 Mikhail Mikhailovich Bakhtin (1895-1975) has become a name to conjure with. We know this because he is now one of those thinkers everyone already knows-without necessarily having to read much of him! Doesn't everyone now know how polyphony functions, what carnival means, why language is dialogic but the novel more so, how chronotopes make possible any concrete artistic cognition and that utterances give rise to genres that last thousands of years, always the same but not the same? Like Marx and Freud in the twentieth century, or Plotinus and Plato in the fourth, a familiarity with Bakhtin's thinking is so commonly assumed, at least in the Humanities, as to be taken for granted. He is no longer an author but a field of study in his own right. As Craig Brandist (of the Bakhtin Centre at Sheffield University) reports: the works of the [Bakhtin] Circle are still appearing in Russian and English, and are already large in number...There are now several thousand works about the Bakhtin Circle.The freedom given to contributors to address any text or topic under the general rubric of *The Bakhtin Circle and Ancient Narrative* has produced a remarkable variety of essays ranging widely over different periods, genres, and cultures. While most of the contributors chose to explore Bakhtin's theory of genre or to take issue with his account of one genre, Greek romance, the remaining contributions defy such convenient categories. What all the essays share with one another (and those collected in *Bakhtin and the Classics*) is the attempt to engage Bakhtin as a reader and thinker.

Existential Physics Sabine Hossenfelder 2022-08-09 A NEW YORK TIMES BESTSELLER "An informed and entertaining guide to what science can and cannot tell us." —The Wall Street Journal "Stimulating . . . encourage[s] readers to push past well-trod assumptions [...] and have fun doing so." —Science Magazine From renowned physicist and creator of the YouTube series "Science without the Gobbledygook," a book that takes a no-nonsense approach to life's biggest questions, and wrestles with what physics really says about the human condition Not only can we not currently explain the origin of the universe, it is questionable we will ever be able to explain it. The notion that there are universes within particles, or that particles are conscious, is ascientific, as is the hypothesis that our universe is a

computer simulation. On the other hand, the idea that the universe itself is conscious is difficult to rule out entirely. According to Sabine Hossenfelder, it is not a coincidence that quantum entanglement and vacuum energy have become the go-to explanations of alternative healers, or that people believe their deceased grandmother is still alive because of quantum mechanics. Science and religion have the same roots, and they still tackle some of the same questions: Where do we come from? Where do we go to? How much can we know? The area of science that is closest to answering these questions is physics. Over the last century, physicists have learned a lot about which spiritual ideas are still compatible with the laws of nature. Not always, though, have they stayed on the scientific side of the debate. In this lively, thought-provoking book, Hossenfelder takes on the biggest questions in physics: Does the past still exist? Do particles think? Was the universe made for us? Has physics ruled out free will? Will we ever have a theory of everything? She lays out how far physicists are on the way to answering these questions, where the current limits are, and what questions might well remain unanswerable forever. Her book offers a no-nonsense yet entertaining take on some of the toughest riddles in existence, and will give the reader a solid grasp on what we know—and what we don't know.
