CAR '98 Heinz U. Lemke 1998 Hardbound. International Congress Series 1165CAR '98 held in Tokyo, Japan, gathered together a host of international and interdisciplinary scientists for the purpose of introducing modern computer-assisted imaging technologies into medical diagnosis, therapy and training. In a short span of time, the impact of new technology has become a subject for discussion on a worldwide basis. Initially, the CAR Program Committee founded in 1983, comprised only of 10% physicians. Currently, as a result of widespread clinical acceptance of computer-assisted methods, more than half are radiologists or surgeons, and the rest are computer scientist and engineers. Over the years, the impact of CAR can be measured by the increased awareness and the raised expectations among participating medical practitioners and health care decision makers that CARS can provide superior quality, better access and lower costs.

It contains updated material including radiation protection and digitization, as well as covering the recognized technique in an updated, user-friendly format. It describes how to take intra- and extra-oral radiographs safely, giving advice on how to achieve the best image possible, as well as hints on how to rectify errors. There are chapters on how to achieve quality within a unit or clinic, and how to get the best from processing radiographs. The textbook contains over 250 illustrations, many of them new for this edition.
