Handbook of Research in Education Finance and Policy Helen F. Ladd 2014-12-17 Sponsored by the Association for Education Finance and Policy (AEFP), the second edition of this groundbreaking handbook assembles in one place the existing research-based knowledge in education finance and policy, with particular attention to elementary and secondary education. Chapters from the first edition have been fully updated and revised to reflect current developments, new policies, and recent research. With new chapters on teacher evaluation, alternatives to traditional public schooling, and cost-benefit analysis, this volume provides a readily available current resource for anyone involved in education finance and policy. The Handbook of Research in Education Finance and Policy traces the evolution of the field from its initial focus on school inputs and revenue sources used to finance these inputs, to a focus on educational outcomes and the larger policies used to achieve them. Chapters show how decision making in school finance inevitably interacts with decisions about governance, accountability, equity, privatization, and other areas of education policy. Because a full understanding of important contemporary issues requires inputs from a variety of perspectives, the Handbook draws on contributors from a number of disciplines. Although many of the chapters cover complex, state-of-the-art empirical research, the authors explain key concepts in language that non-specialists can understand. This comprehensive, balanced, and accessible resource provides a wealth of factual information, data, and wisdom to help educators improve the quality of education in the United States.

Stealth Assessment Valerie Jean Shute 2013 An approach to performance-based assessments that embeds assessments in digital games in order to measure how students are progressing toward targeted goals. To succeed in today's interconnected and complex world, workers need to be able to think systemically, creatively, and critically. Equipping K-16 students with these twenty-first-century competencies requires new thinking not only about what should be taught in school but also about how to develop valid assessments to measure and support these competencies. In Stealth Assessment, Valerie Shute and Matthew Ventura investigate an approach that embeds performance-based assessments in digital games. They argue that using well-designed games as vehicles to assess and support learning will help combat students' growing disengagement from school, provide dynamic and ongoing measures of learning processes and outcomes, and offer students opportunities to apply such complex competencies as creativity, problem solving, persistence, and collaboration. Embedding assessments within games provides a way to monitor players' progress toward targeted competencies and to use that information to support learning. Shute and Ventura discuss problems with such traditional assessment methods as multiple-choice questions, review evidence relating to digital games and

learning, and illustrate the stealth-assessment approach with a set of assessments they are developing and embedding in the digital game Newton's Playground. These stealth assessments are intended to measure levels of creativity, persistence, and conceptual understanding of Newtonian physics during game play. Finally, they consider future research directions related to stealth assessment in education.

Modelling, Simulation and Data Analysis in Acoustical Problems Claudio Guarnaccia 2020-06-23 Modelling and simulation in acoustics is currently gaining importance. In fact, with the development and improvement of innovative computational techniques and with the growing need for predictive models, an impressive boost has been observed in several research and application areas, such as noise control, indoor acoustics, and industrial applications. This led us to the proposal of a special issue about "Modelling, Simulation and Data Analysis in Acoustical Problems", as we believe in the importance of these topics in modern acoustics' studies. In total, 81 papers were submitted and 33 of them were published, with an acceptance rate of 37.5%. According to the number of papers submitted, it can be affirmed that this is a trending topic in the scientific and academic community and this special issue will try to provide a future reference for the research that will be developed in coming years.

E-Learning in the Middle East and North Africa (MENA) Region Alan S. Weber 2018-02-27 In the last decade, due to factors of ICT infrastructural and broadband maturation, rising levels of educational attainment and computer literacy, and diversification strategies, e-learning has exploded in the Middle East and North Africa (MENA) region. However, significant barriers remain in the region's e-learning development: lack of research on outcomes and effectiveness, paucity of Arabic language learning objects, monopolies and high cost of telecommunications, cultural taboos, accreditation, censorship, and teacher training. This unique volume is the first comprehensive effort to describe the history, development, and current state of e-learning in each of the 20 MENA countries from Algeria to Yemen. Each entry is expertly written by a specialist who is acutely familiar with the state of e-learning in their

respective country, and concludes with a bibliography of key reports, peer-reviewed books and articles, and web resources. E-Learning in the Middle East and North Africa (MENA) proves itself as a vital compendium for a wide readership that includes academics and students, transnational program directors, international education experts, MENA government departments, commercial vendors and investors, and ICT development and regulatory agencies involved in e-learning in the Middle East.

Antibiotics and Bacterial Resistance Wiley 2013-01-14 The need for novel antibiotics is greater now than perhaps anytime since the pre-antibiotic era. Indeed, the recent collapse ofmany pharmaceutical antibacterial groups, combined with theemergence of hypervirulent and pan-antibiotic-resistant bacteriahas severely compromised infection treatment options and led todramatic increases in the incidence and severity of bacterialinfections. This collection of reviews and laboratory protocols gives thereader an introduction to the causes of antibiotic resistance, thebacterial strains that pose the largest danger to humans (i.e.,streptococci, pneumococci and enterococci) and the antimicrobialagents used to combat infections with these organisms. Some newavenues that are being investigated for antibiotic development arealso discussed. Such developments include the discovery of agentsthat inhibit bacterial RNA degradation, the bacterial ribosome, andstructure-based approaches to antibiotic drug discovery. Two laboratory protocols are provided to illustrate differentstrategies for discovering new antibiotics. One is a bacterialgrowth inhibition assay to identify inhibitors of bacterial growththat specifically target conditionally essential enzymes in thepathway of interest. The other protocol is used to identifyinhibitors of bacterial cell-to-cell signaling. This e-book – a curated collection from eLS, WIREs, andCurrent Protocols – offers a fantastic introduction to thefield of antibiotics and antibiotic resistance for students orinterdisciplinary collaborators. Stages of Faith James W. Fowler 1995-09-15 Dr. James Fowler has asked these questions, and others like them, of nearly six hundred people. He has talked with men, women, and children of all ages, from four to eighty-eight, including Jews, Catholics, Protestants, agnostics, and atheists. In many cases, the interviews became in-depth conversations that provided rare, intimate glimpses into the various ways our lives have meaning and purpose, windows into what this books calls faith. Faith, as approached here, is not necessarily religious, nor is it to be equated with belief. Rather, faith is a person's way of leaning into and making sense of life. More verb that noun, faith is the dynamic system of images, values, and commitments that guide one's life. It is thus universal: everyone who chooses to go on living operated by some basic faith. Building on the contributions of such key thinkers as Piaget, Erikson, and Kohlberg, Fowler draws on a wide range of scholarship, literature, and firsthand research to present expertly and engagingly the six stages that emerge in working out the meaning of our lives--from the intuitive, imitative faith of childhood through conventional and then more independent faith to the universalizing, self-transcending faith of full maturity. Stages of Faith helps us to understand our own pilgrimage of faith, the passages of our own quest for meaning and value.

Cases on Challenges Facing E-Learning and National Development Ugur Demiray 2010 E-Learning offers many opportunities for individuals and institutions all over the world. Individuals can access to education they need almost anytime and anywhere they are ready to. Institutions are able to provide more cost-effective training to their employees. E-learning context is very important. It is common to find educators who perceive e-learning as internet-only education that encourages a static and content-focused series of text pages on screen. Others envisage the shallow and random online messages that are typical of a social real-time chat session, and wonder how that type of communication could add any value to academic discourse. Some may have experienced e-learning done poorly, and extrapolate their experience into a negative impression of all e-learning. The book will examine the emergence and growth of e-learning. The use of the "e" prefix indicates the application of information and communication technology (ICT) in government, finance, and all forms of socio-economic and community development. This eBook is designed and presented in two volumes. The first volume consists of the country cases of Algeria, Belarus, Bulgaria, Egypt, Estonia, Finland, Greece, Jordan, Hungary, Iraq, Iran, Israel,

Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Macedonia, Moldova, and Morocco. The second volume gives a place to the country cases of Norway, Oman, Palestine, Poland, Romania, Russia, Saudi Arabia, Serbia, Slovakia, Slovenia, Sweden, Syria, Tajikistan, Tunisia, Turkey, Ukraine, United Arab Emirates and Uzbekistan. So, the book consists of more than 70 authors from 39 different countries and from 42 universities and 14 institutions with company for all 42 chapters. (Individual chapters contain references.) Learner-Centered Teaching Maryellen Weimer 2008-05-02 In this much needed resource, Maryellen Weimer-one of the nation's most highly regarded authorities on effective college teaching-offers a comprehensive work on the topic of learner-centered teaching in the college and university classroom. As the author explains, learner-centered teaching focuses attention on what the student is learning, how the student is learning, the conditions under which the student is learning, whether the student is retaining and applying the learning, and how current learning positions the student for future learning.

To help educators accomplish the goals of learner-centered teaching, this important book presents the meaning, practice, and ramifications of the learner-centered approach, and how this approach transforms the college classroom environment. Learner-Centered Teaching shows how to tie teaching and curriculum to the process and objectives of learning rather than to the content delivery alone.
