Neuro-ophthalmology Christopher Kennard 2011 This volume provides a comprehensive look into the innovative methods used to explore the visual system. From the way the brain processes vision, an imperative part of the human experience, to the role eye movement plays in a range of questions concerning visual perception, memory, attention, free will, and even topological diagnoses, this in-depth handbook gives neurologists, ophthalmologists, and neuro-ophthalmologists an invaluable tool to help them better understand the visual system. Disorders of the retinal and cerebral cortex, and those that affect control of eye and lid movements are thoroughly discussed, along with groundbreaking visual rehabilitative methods, and chapters on individual parts of the visual system. Practitioners will find a useful resource that lays out fundamental concepts, while seamlessly summarizing clinical and laboratory methods for neuro-ophthalmological evaluation. The material is perfect for early-stage physicians or long practicing specialists who wish to learn the latest developments in the field. * A comprehensive resource that explores the innovative methods used to understand the visual system * An in-depth study of how the brain processes vision, and the role certain functions such as eye movement play in visual diagnosis and memory * Clinical and laboratory methods of evaluation that are perfect for physicians and specialists in any stage of practice

Ophthalmology in Military and Civilian Casualty Care Christopher J. Calvano 2019-07-30 Trauma to the eye and associated structures account for a significant number of combat-related injuries, and combat ocular trauma has steadily risen in frequency over the last century. *Ophthalmology in Military and Civilian Casualty Care* comprehensively examines the accommodations and modifications that must be made in order to treat such ocular traumas in a military setting. Created by ophthalmology experts actively serving in the military at various levels, this book is designed to improve ophthalmic casualty outcomes across military settings. A history of military ophthalmology serves as the opening chapter, setting the stage for subsequent chapters examining the intricacies and advancements of damage control ophthalmology, prehospital care of combat eye injuries, neuro-ophthalmic manifestations of trauma, and further severe ocular conditions. Later chapters explore the preventative and proactive efforts to reduce and treat combat-related ocular trauma by developing “eye armor” for the American infantry and military-affiliated ophthalmic surgical missions. Complete with high-quality color illustrations and figures, this unique book will serve as an invaluable, practical reference for military physicians, military ophthalmologists,

ophthalmology professors, residents, and fellows interested in combat medicine and eye trauma.

Wavefront Optics for Vision Correction Guang-ming Dai 2008-01-01 This book addresses some of the issues in visual optics with a functional analysis of ocular aberrations, especially for the purpose of vision correction. The basis is the analytical representation of ocular aberrations with a set of orthonormal polynomials, such as Zernike polynomials or the Fourier series. Although the aim of this book is the application of wavefront optics to laser vision correction, most of the theories discussed are equally applicable to other methods of vision correction, such as contact lenses and intraocular lenses.

History and Physical Examination: A Common Sense Approach Mark Kauffman 2013-02-14 History and Physical Examination: A Common Sense Approach provides a comprehensive, accessible foundation to the crucial patient care skill of clinical history taking and 'head-to-toe' clinical examination. Through full color illustrations, patient photographs, and video examples, this valuable resource highlights a logical, step-by-step approach to gain clinical competency. The authoritative content is divided into three sections to build and develop students' practical skills: History Flows, which provide context and practice through clinical scenario work, to logically develop differential diagnoses; Physical Examination Flows, which focus on comprehensive and consistent exams by using the human body as a map; and finally, Comprehensive Flows, which enable the student to apply their history taking and examination tools together to develop a differential diagnosis and a treatment plan—all under the real-world pressure of a time-sensitive office visit. Each section features "Clinical Case Practice" for students to interact and apply the clinical concepts and to prepare for actual practice. By moving beyond discrete symptoms, History and Physical Examination: A Common Sense Approach prepares students not only for practical boards, but for delivering humanistic care in real-world patient encounters.

Critical Care Transport American Academy of Orthopaedic Surgeons (AAOS) 2009-11-13 Welcome to the new gold standard in critical care transport training. Published in conjunction with the American Academy of Orthopaedic Surgeons (AAOS) and the American College of Emergency Physicians (ACEP), *Critical Care Transport* offers cutting edge content relevant to any healthcare provider training in critical care transport. Like no other textbook in this market, *Critical Care Transport* thoroughly prepares medical professionals to function as competent members of a critical care team by covering the material that everyone--paramedics, nurses, physicians, and specialty crew--needs to know to operate effectively in the prehospital critical care environment. This book meets the curricula of major critical care training programs, including University of Maryland, Baltimore County (UMBC). It covers both ground and flight transport, and meets the objectives of critical care transport certification exams such as the Certified Flight Paramedic (FP-C) exam administered by the Board for Critical Care Transport Paramedic Certification. Content includes information specific to prehospital critical care transport, such as flight physiology, lab analysis, hemodynamic monitoring, and specialized devices such as the intra-aortic balloon pump. Standard topics such as airway management, trauma, and pharmacology are covered in the context of critical care. Chapters have been authored by leading critical care professionals across the country and represent the most current, state-of-the-art information on management of critical care patients.

Eyesight of School Children J. H. Berkowitz 1920 Competent authorities seem to agree as to the causes of eye strain in school children other than congenital defects. Standard works on diseases of the eye are practically unanimous in declaring that myopia results from the protracted and unhygienic use of the eyes in near work. Most of the factors tending to cause eye strain exist in the schools. Among them are improper illumination: glare from windows, from glazed paper, and from improperly arranged artificial illumination; improper seating; poor printing and improper type. This bulletin represents the results of a

comprehensive survey having for its objects the ascertaining of the following: (1) The nature and extent of defective vision in school children as disclosed by medical inspection; (2) The preventable causes within the schools and factors intimately connected with school life to which may be attributed eye strain and general deterioration of visual capacity, as established by the investigations of different authorities; (3) Efforts made to correct conditions inimical to eyesight in the schools and prophylactic measures adopted; (4) Clinical facilities for the correction of refractive errors and available sources of supplying needy children with eye glasses; and (5) Necessary improvements in facilities and methods in three various fields. The chief considerations were the environmental influences which tend to produce functional disturbances of the eye and thereby to impair the physical fitness of the child for school work and later for industrial or professional work. Eight appendixes present: (1) Book type specimens; (2) School survey forms; (3) Direction for testing sight and hearing; (4) Standard for admission to the conservation of vision classes; (5) Forms used in cooperative health supervision, New York City; (6) English and American specimen forms; (7) Vision test charts; and (8) State laws requiring vision tests. An index and general reference and annotated bibliography are included. Individual sections contain footnotes. (Contains 16 plates.) [Best copy available has been provided.]

Patient Encounters Michael Levy 2010 Written for medical students approaching patients for the first time in a new psychiatry/neurology rotation, this easy-to-use book covers the most common conditions in the psychiatry/neurology clerkship and explains the rationale behind clinical decision making.

Evidence-Based Geriatric Nursing Protocols for Best Practice Elizabeth Capezuti, PhD, RN, FAAN
2011-11-18 Named a 2013 Doody's Core Title! "The evidence-based protocols are designed as a primary reference and are useful, substantive, and timely...The broader contributions of useful format and succinct review of the evidence make it likely that this text will continue to be the leading resource in nursing education and practice."--The Gerontologist "Now more than ever, nurses are called upon to lead efforts to embed evidence-based practice in daily operations. As the IOM report states, 'nurses have key roles to play as team members and leaders for a reformed and better-integrated, patient-centered health care system.' The process of implementing sweeping change in health care will likely take years; however, nurses must start pragmatically and focus on these critically important protocols that have demonstrated

improved outcomes for older adults. Simply stated, 'Pick this book up and use it.'" From the Foreword, Susan L. Carlson, MSN, APRN, ACNS-BC, GNP-BC, FNGNA President, National Gerontological Nursing Association "As a gerontological clinical educator/research nurse, I will often use this as a reference. The format and the content are good, and the explanations of how to best use the evidence simplify the process of sifting through mountains of information to figure the best practice." Score: 97, 5 Stars. --

Doody's One of the premier reference books for geriatric nurses in hospital, long-term, and community settings, this 4th edition has been thoroughly updated to provide the most current, evidence-based protocols for care of common clinical conditions and issues in elderly patients. Designed to improve the quality, outcomes, and cost-effectiveness of health care, these guidelines are the result of collaboration between leading practitioners and educators in geriatric nursing and New York University College of Nursing. Protocols for each clinical condition have been developed by experts in that particular area, and most have been systematically tested by over 300 participating hospitals in "Nurses Improving Care for Health System Elders" (NICHE). Evidence is derived from all levels of care, including community, primary, and long-term care. A systematic method in compliance with the AGREE appraisal process was used to rate the levels of evidence for each protocol. Protocols are organized in a consistent format for ease of use, and each includes an overview, evidence-based assessment and intervention strategies, and an illustrative case study with discussion. Additionally, each protocol is embedded within chapter text, which provides the context and detailed evidence for the protocol. Each chapter contains resources for further study. Key Features: Updated to provide a wide range of evidence-based geriatric protocols for best practices Contains new chapters on function-focused care, catheter-associated urinary tract infections, mistreatment detection, acute care models, and transitional care Illustrates application of clinical protocols to real-life practice through case studies and discussion Edited by nationally known leaders in geriatric nursing education and practice, who are endorsed by the Hartford Institute for Geriatric Nursing and NICHE Encompasses the contributions of 58 leading practitioners of geriatric care Written for nursing students, nurse leaders, and practitioners at all levels, including those in specialty roles

Health Assessment and Physical Examination Mary Ellen Zator Estes 2019-10-24 Health assessment is an ongoing process that evaluates the whole person as a physical, psychosocial and functional being, whether they are young or old, well or ill. This market-leading text presents health assessment, physical examination information and skills for health professionals who undertake these types of assessments. *Health Assessment and Physical Examination* is scaffolded from foundation to more advanced health assessment, following a body-systems approach and a 'head-to-toe' approach. It uses the ENAP (Examine–Normal–Abnormal–Pathophysiology) approach as a tool for students to collect useful information. An applied case study at the end of each chapter walks students through an example of an assessment. This comprehensive yet student-friendly text is noted for its high-quality case studies, pedagogical elements, and excellent student resources. Unique to this text are the advanced topics and 'Urgent findings', which highlights serious or life-threatening signs or critical assessment findings that need immediate attention.
