Analyzing Public Policy Peter John 2013-02-28 The fully revised and updated new edition of this textbook continues to provide the most accessible overview of the main approaches in the study of public policy. It seeks to review the most common and widely used frameworks in the study of policy analysis: institutions groups and networks society and the economy individual interests ideas. The book explains each one, offers constructive criticisms and explores their claims in the light of a variety of American, British and European examples. Arguing that no one framework offers a comprehensive explanation of public policy; John suggests a synthesis based on different aspects of the approaches, introducing concepts/approaches of advocacy coalitions, punctuated equilibrium and evolution as more effective ways to understand public policy. Combining both a clear summary of debates in public policy and a new and original approach to the subject, this book remains essential reading for students of public policy and policy analysis.

Teaching Social Science in Schools Alex M George 2009-02-04 The NCERT has been publishing a new generation of social science textbooks since 2005. Teaching Social Science in Schools is a manual that explains the rationale for the new approach and illustrates how the new textbooks can be used effectively. It provides answers to many questions such as: - What problems are teachers likely to face while teaching with the help of the new textbooks? - Why not provide straight and direct definitions for children to learn? - Have such textbooks been used elsewhere in the country? - What roles are parents expected to play? Alex M George and Amman Madan come up with jargon-free replies in a friendly, 'frequently-asked-questions' format. They take us through the challenges of textbook preparation and offer guidelines for interactive classroom sessions. This book is a must-have not only for school and college libraries, but would also well adorn the bookshelves of teachers, trainee teachers, parents, students, educationists, designers of school curricula, or any reader interested in the way young people are taught social science in India.

Literary Research and the Anglo-Saxon and Medieval Eras Dustin Booher 2020-02-20 Literary Research and the Anglo-Saxon and Medieval Eras: Strategies and Sources is a guide to scholarly research in the field of medieval English literature covering the period 450 CE to 1500 CE. Graduate students and scholars researching this period face many challenges: working in two distinct literary traditions, comprehending multiple languages (Old English, Middle English, Latin, Anglo-Norman, and French), knowing the manuscript tradition for a particular title and the research methodologies for discovering and locating primary sources in

the print and digital realms, and the awareness of the overlap and assimilation of literary themes with religious, historical, cultural, and political perspectives. The volume presents the best practices for building a foundation of sound scholarship practices in the field of medieval English literature. This volume explores primary and secondary resources, including general literary research guides; types of library catalogs; print and online bibliographies and indexes; scholarly journals and series; manuscripts, archives, and digital collections; genres; tools for understanding Old and Middle English such as dictionaries, lexicons, thesauri, glosses, etymologies, palaeographies, and text mining tools; and Web resources. The final chapter researches the shifting reputation of the poet, Thomas Hoccleve. Given the interdisciplinary nature of medieval studies, an appendix of additional readings in art, history, music, philosophy, religion, science, social sciences, and theater is provided.

Expert Political Judgment Philip E. Tetlock 2017-08-29 Since its original publication, *Expert Political Judgment* by New York Times bestselling author Philip Tetlock has established itself as a contemporary classic in the literature on evaluating expert opinion. Tetlock first discusses arguments about whether the world is too complex for people to find the tools to understand political phenomena, let alone predict the future. He evaluates predictions from experts in different fields, comparing them to predictions by well-informed laity or those based on simple extrapolation from current trends. He goes on to analyze which styles of thinking are more successful in forecasting. Classifying thinking styles using Isaiah Berlin's prototypes of the fox and the hedgehog, Tetlock contends that the fox--the thinker who knows many little things, draws from an eclectic array of traditions, and is better able to improvise in response to changing events--is more successful in predicting the future than the hedgehog, who knows one big thing, toils devotedly within one tradition, and imposes formulaic solutions on ill-defined problems. He notes a perversely inverse relationship between the best scientific indicators of good judgement and the qualities that the media most prizes in pundits--the single-minded determination required to prevail in ideological combat. Clearly written and impeccably researched, the book fills a huge void in the literature on evaluating expert opinion. It will appeal across many academic disciplines as well as to corporations seeking to develop standards for judging expert decision-making. Now with a new preface in which Tetlock discusses the latest research in the field, the book explores what constitutes good judgment in predicting future events and looks at why experts are often wrong in their forecasts.

Rethinking Military History Jeremy Black 2004 Rethinking Military History is a bold new 'thought book' that reconsiders military history at the beginning of the twenty-first century. The chapters provide a valuable and concise survey of the main themes in the study of military history from 1500 to the present day as Jeremy Black reveals the main trends in the practice and approach to military history and proposes a new manifesto for the subject to move forward. This must-read study demonstrates the limitations of current approaches, including common generalizations, omissions, and over-simplifications. Engaging theoretical discussions, with reference to specific conflicts, suggest how these limitations can be remedied and adapted, whilst incorporating contributions from other disciplines. Rethinking Military History is essential reading for all those with an interest in military history, and all who wish to take part in moving the discipline forward.

The Development of Political Science David Easton 2002-03-11 In recent years the history of political science has become recognised as an important but neglected area of study. The Development of Political Science is the first comprehensive discussion of the subject in a comparative international perspective. Offering a wide-ranging account of the development of the subject and its dissemination across national borders and cultural divides, the book begins with a study of the historiography of the discipline in the United States, a country which has been at the forefront of the field. Widening its discussion to emphasise Western Europe as a focus for comparison, the contributors provide studies of further areas of interest such as China and Africa. This

particular approach emphasises the book's vision of political science as a growing transnational body of knowledge. In presenting critical analysis of the state of the field, this vigorous study aims to further the development of the discipline in the countries discussed, and to provide a work that is interesting not only to political scientists, but to all those concerned with the development of the social sciences.

Information Brokers and Reference Services Robin Kinder 2019-12-06 The contradictory yet complementary relationship between libraries and information brokers is examined in this volume, first published in 1988. Since its escalation in the 1960s, information brokering has challenged the role of the library in society. Librarians discuss their concerns about information brokers - the impact of brokers on reference services, the competence of brokers, abuse of library services by brokers, and whether libraries should provide competing fee-based services. Brokers share their own view as 'entrepreneurs', providing background, offering advice, and explaining the risks involved in their business. This lively, often controversial discussion offers suggestions for improving relations between libraries and information brokers, while continuing to serve the public well.

The Statistical Method in Economics and Political Science P. Sargant Florence 2018-04-09 Originally published in 1929. This balanced combination of fieldwork, statistical measurement, and realistic applications shows a synthesis of economics and political science in a conception of an organic relationship between the two sciences that involves functional analysis, institutional interpretation, and a more workmanlike approach to questions of organization such as division of labour and the control of industry. The treatise applies the test of fact through statistical analysis to economic and political theories for the quantitative and institutional approach in solving social and industrial problems. It constructs a framework of concepts, combining both economic and political theory, to systematically produce an original statement in general terms of the principles and methods for statistical fieldwork. The separation into Parts allows selective reading for the methods of statistical measurement; the principles and fallacies of applying these measures to economic and political fields; and the resultant construction of a statistical economics and politics. Basic statistical concepts are described for application, with each method of statistical measurement illustrated with instances relevant to the economic and political theory discussed and a statistical glossary is included.

Rethinking Canadian Aid Stephen Brown 2015-01-08 In 2013, the government abolished the Canadian International Development Agency (CIDA), which had been Canada's flagship foreign aid agency for decades, and transferred its functions to the newly renamed Department of Foreign Affairs, Trade and Development (DFATD). As the government is rethinking Canadian aid and its relationship with other foreign policy and commercial objectives, the time is ripe to rethink Canadian aid more broadly. Edited by Stephen Brown, Molly den Heyer and David R. Black, this is the first book on Canadian foreign aid since CIDA was folded into DFATD. Designed to reach a variety of audiences, contributions by twenty-one scholars and experts in the field offer an incisive examination of Canada's record and recent changes in Canadian foreign aid, such as its focus on maternal and child health and on the extractive sector. Many chapters also ask more fundamental questions concerning the intersection of the moral imperative that underpins aid and the trend towards greater self-interest. For instance, what are and what should be the underlying motives of Canadian aid? How compatible are altruism and self-interest in foreign aid? To what extent should aid be integrated with Canada's other policies and practices? The portrait that emerges is a sobering one. This book is essential reading for anyone interested in Canada's changing role in the world and how it reflects on Canada.
