Voices of the Turtledoves Jeff Bach 2005-01-01 Winner, 2004 Dale W. Brown Book Award for Outstanding Scholarship in Anabaptist and Pietist Studies Winner, 2005 Outstanding Publication, Communal Studies Association Co-published with the Pennsylvania German Society/Vandenhoeck & Ruprecht The Ephrata Cloister was a community of radical Pietists founded by Georg Conrad Beissel (1691&–1768), a charismatic mystic who had been a journeyman baker in Europe. In 1720 he and a few companions sought a new life in William Penn&'s land of religious freedom, eventually settling on the banks of the Cocalico Creek in what is now Lancaster County. They called their community &"Ephrata,&" after the Hebrew name for the area around Bethlehem. *Voices of the Turtledoves* is a fascinating look at the sacred world that flourished at Ephrata. In *Voices of the Turtledoves*, Jeff Bach is the first to draw extensively on Ephrata&'s manuscript resources and on recent archaeological investigations to present an overarching look at the community. He concludes that the key to understanding all the various aspects of life at Ephrata&–its architecture, manuscript art, and social organization&–is the religious thought of Beissel and his co-leaders.

Chemokines Nuska Tschammer 2015-03-02 Medicinal chemistry is both science and art. The science of medicinal chemistry offers mankind one of its best hopes for improving the quality of life. The art of medicinal chemistry continues to challenge its practitioners with the need for both intuition and experience to discover new drugs. Hence sharing the experience of drug research is uniquely beneficial to the field of medicinal chemistry. Drug research requires interdisciplinary team-work at the interface between chemistry, biology and medicine. Therefore, the topic-related series Topics in Medicinal Chemistry covers all relevant aspects of drug research, e.g. pathobiochemistry of diseases, identification and validation of (emerging) drug targets, structural biology, drugability of targets, drug design approaches, chemogenomics, synthetic chemistry including combinatorial methods, bioorganic chemistry, natural compounds, high-throughput screening, pharmacological in vitro and in vivo investigations, drug-receptor interactions on the molecular level, structure-activity relationships, drug absorption, distribution, metabolism, elimination, toxicology and pharmacogenomics. In general, special volumes are edited by well known guest editors.

Hannah Massey / the Fifteen Streets Catherine Cookson 1999 HANNAH MASSEY: Proud and canny, ignorant and intensely ambitious, Hannah Massey is a born ruler. Her kingdom may be only a working class household in County Durham, but within its walls her iron will governs a predominantly male family and her word is unchallengeable law. The apple of Hannah's eye is her pretty younger daughter, Rosie, who has just returned home after a spell in London. Her return is shrouded in mystery and evasions, and when the truth does come out, Hannah's world is torn apart. THE FIFTEEN STREETS: Life in the Fifteen Streets was tough – a continual struggle for survival. Some families gave up and descended into a dismal state of grinding poverty. Others, like the O'Briens – and especially John O'Brien – fought grimly for a world they were only rarely allowed to glimpse. When John O'Brien fell in love with Mary Llewellyn, he knew there was a gulf between them that nothing could bridge – it was the gulf of the Fifteen Streets.

Seismic Data Interpretation and Evaluation for Hydrocarbon Exploration and Production Niranjana C. Nanda 2016-03-10 This book introduces readers to the field of seismic data interpretation and evaluation, covering themes such as petroleum exploration and high resolution seismic data. It helps geoscientists and engineers who are practitioners in this area to both understand and to avoid the potential pitfalls of interpreting and evaluating such data, especially the over-reliance on sophisticated software packages and workstations alongside a lack of grasp on the elementary principles of geology

and geophysics. Chapters elaborate on the necessary principles, from topics like seismic wave propagation and rock-fluid parameters to seismic modeling and inversions, explaining the need to understand geological implications. The difference between interpretation of data and its evaluation is highlighted and the author encourages imaginative, logical and practical application of knowledge. Readers will appreciate the exquisite illustrations included with the accessibly written text, which simplify the process of learning about interpretation of seismic data. This multidisciplinary, integrated and practical approach to data evaluation will prove to be a valuable tool for students and young professionals, especially those connected with oil companies.

Policy Change in the EU's Immediate Neighbourhood Tanja A. Börzel 2012 This edited volume analyzes the EU's influence on policy changes in neighborhood countries in Southeast Europe, Turkey, Eastern Europe, the Southern Caucasus, and the southern Mediterranean. The book develops short-, medium-, and long-term policy recommendations on how the EU can improve its support of reforms concerning societal, economic, and political issues. In doing this, it tackles policies, such as democracy promotion, environmental policy, visa facilitation, regulatory convergence with the internal market, political decentralization for conflict resolution, and the role of civil society in these reform processes. Overall, the book encourages the EU to design its policies to be more target group oriented and to extend the circle of actors addressed to include non-state actors. Frontiers in General Relativity Peter A. Hogan 2021-05-02 This book discusses some of the open questions addressed by researchers in general relativity. Photons and particles play important roles in the theoretical framework, since they are involved in analyzing and measuring gravitational fields and in constructing mathematical models of gravitational fields of various types. The

authors highlight this aspect covering topics such as the construction of models of Bateman electromagnetic waves and analogous gravitational waves, the studies of gravitational radiation in presence of a cosmological constant and the gravitational compass or clock compass for providing an operational way of measuring a gravitational field. The book is meant for advanced students and young researchers in general relativity, who look for an updated text which covers in depth the calculations and, equally, takes on new challenges. The reader, along the learning path, is stimulated by provocative examples interspersed in the text that help to find novel representations of the uses of particles and photons.

Language Contact across the North Atlantic P. Sture Ureland 1996-01-01 This volume contains a selection of papers which have been revised and extended for publication from two working groups held at conferences at Galway (1992) and Göteborg (1993) which celebrated the quincentenary of Columbus' discovery of America in 1492. The pre-Columbian period of language contact is covered by articles on Old Norse in the Faroes, Scotland and Ireland, the Shetland dialect and Norn, and placenames in Iceland and Greenland. The articles on the post-Columbian period are wide-ranging and cover, in the Scandinavian context, the Scandinavian emigration, American Swedish, American Finnish, Swedish-Spanish and various aspects of Norwegian in America and also in Spitzbergen; in the British colonial context, English dialects in New England, Scottish Gaelic in Nova Scotia and Scots in North America (Maryland, the Appalachians and Virginia); in the context of the later continental mass emigration, American Dutch, Texas German, Croatian and Italian. Two papers deal with reverse emigration, that of Sicilian and Calabrian dialects, and the special case of Krio in Sierra Leone.

Perception, Interaction and Language Felicie D. Affolter 2011-12-21 Perception, Interaction and Language is essentially about the nature of adaptive learning in both its normal and abnormal forms. A major pre-mise is that verbal and nonverbal learning depend critically on interaction with the environment via daily life problem solving activity. This new perspective is not entirely

unfamiliar. But, a fundamentally new perspective is offered by the additional premise that tactile-kinesthetic perception associated with problem solving experiences provides the primary basis for interaction and hence, is the root of adaptive learning and development. Although decades have passed since Jean Piaget first proposed a model of cognitive learning and development that builds on sensorimotor processes, little seems to be known about how human actions are actually translated into adaptive behavior. We are keenly reminded of this lack of knowledge when dealing with persons who present abnormal performance. The failure to learn language, in particular, can create a devastating handicap. Therefore, it is not surprising that systematic attention has been given to research and clinical programs for the language disordered.

Mathematical Foundations of Computer Science 2003 Branislav Rován 2003-12-03 This book constitutes the refereed proceedings of the 28th International Symposium on Mathematical Foundations of Computer Science, MFCS 2003, held in Bratislava, Slovakia in August 2003. The 55 revised full papers presented together with 7 invited papers were carefully reviewed and selected from 137 submissions. All current aspects in theoretical computer science are addressed, ranging from discrete mathematics, combinatorial optimization, graph theory, networking, algorithms, and complexity to programming theory, formal methods, and mathematical logic.

What She Wants Cathy Kelly 2009-07-07 Ireland's #1 bestselling author Cathy Kelly weaves a heartwarming tale about a group of friends who discover that when life gets comfortable, unexpected surprises are just around the corner. Do you know what you'll be doing next year? Three friends—Hope, Sam, and Virginia—all thought they did. Hope would still be slogging it out as a working mom, snatching quality time with husband Marc and her two small children. Her sister Sam was going to be the acclaimed boss of a record label, turning heads as the toughest, most brilliant music mogul around. Virginia would be planning her dream retirement home with her beloved husband Bill and doting on their little granddaughter. But destiny had other plans for them. Suddenly everything drastically changes for each of the three women, and they have to look deep within themselves to find out what they really want from life. And in surviving the turmoil ahead, they will discover that a loving family and good friends make all the difference....

Logic Functions and Equations Christian Posthoff 2013-03-19 Logic functions and equations are (some of) the most important concepts of Computer Science with many applications such as Binary Arithmetics, Coding, Complexity, Logic Design, Programming, Computer Architecture and Artificial Intelligence. They are very often studied in a minimum way prior to or together with their respective applications. Based on our long-time teaching experience, a comprehensive presentation of these concepts is given, especially emphasising a thorough understanding as well as numerical and computer-based solution methods. Any applications and examples from all the respective areas are given that can be dealt with in a unified way. They offer a broad understanding of the recent developments in Computer Science and are directly applicable in professional life. Logic Functions and Equations is highly recommended for a one- or two-semester course in many Computer Science or computer Science-oriented programmes. It allows students an easy high-level access to these methods and enables sophisticated applications in many different areas. It elegantly bridges the gap between Mathematics and the required theoretical foundations of Computer Science.
