African Economic Development Christopher Cramer 2020 "This book challenges conventional wisdoms about economic performance and possible policies for economic development in African countries. Its starting point is the striking variation in African economic performance. Unevenness and inequalities form a central fact of African economic experiences. The authors highlight not only differences between countries, but also variations within countries, differences often organized around distinctions of gender, class, and ethnic identity. For example, neo-natal mortality and school dropout have been reduced, particularly for some classes of women in some areas of Africa. Horticultural and agribusiness exports have grown far more rapidly in some countries than in others. These variations (and many others) point to opportunities for changing performance, reducing inequalities, learning from other policy experiences, and escaping the ties of structure, and the legacies of a colonial past. The book rejects teleological illusions and Eurocentric prejudice, but it does pay close attention to the results of policy in more industrialized parts of the world. Seeing the contradictions of capitalism for what they are - fundamental and enduring - may help policy officials protect themselves against the misleading idea that development can be expected to be a smooth, linear process, or that it would be were certain impediments suddenly removed. The authors criticize a wide range of orthodox and heterodox economists, especially for their cavalier attitude to evidence. Drawing on their own decades of research and policy experience, they combine careful use of available evidence from a range of African countries with political economy insights (mainly derived from Kalecki, Kaldor and Hirschman) to make the policy case for specific types of public sector investment"--

Neuropsychiatric Assessment Stuart C. Yudofsky 2008-05-20 What is neuropsychiatry? This remarkable volume answers that question -- and more. Neuropsychiatry, which focuses on assessment and diagnostic issues at the interface of psychiatry and neurology, is enjoying a renaissance, largely because of the technological innovations detailed in these five chapters. Here, 11 recognized experts have assembled an overview of the essential techniques, current research, and future trends in neuropsychiatric assessment, focusing on clinical applications for psychiatry patients. This eminently practical work begins with the cornerstone of any neuropsychiatric assessment, the physical examination and the medical and psychiatric history. Included here is a head-to-toe compendium of important signs and symptoms to elicit, along with the differential diagnoses of neuropsychiatric disorders to consider when faced with a particular constellation of signs and symptoms. Subsequent chapters discuss the critical importance of the neuropsychological examination, traditionally administered by neuropsychologists and thus often overlooked by psychiatrists in routine workups of their patients. Topics addressed include the clinical approach to the interview process, fixed- and flexible-battery approaches to assessment, interpretation pitfalls, and future trends. The authors illustrate how this essential tool can reveal the major cognitive domains that may be involved in neuropsychiatric disorders and show how specific patterns of deficits in certain domains may help determine a neuropsychiatric diagnosis. The relevance of electrophysiological testing, an underused but invaluable resource, to neuropsychiatric disorders. The authors discuss standard, topographic, and quantitative electroencephalography; cerebral evoked potentials, and polysomnography, providing recommendations for the application of these tools in certain clinical situations (e.g., cognitive decline, rapid-cycling bipolar disorder) and projections for broader uses of electrophysiological testing in the future. The key importance of laboratory testing, especially in view of the complex array of neurological and medical illnesses that may underlie the symptoms of neuropsychiatric patients. The lack of consensus guidelines for the use of conventional laboratory testing, chest X rays, and electrocardiograms in screening patients with neuropsychiatric symptoms continues to constrain our ability to help these patients. The potential of today's increasingly sophisticated neuroimaging approaches -- from structural and functional magnetic resonance imaging and magnetic resonance spectroscopy to diffusion tensor imaging and positron emission tomography -- to reveal the brain and its pathways with unprecedented clarity. The authors provide a fascinating overview of the techniques involved and the current research findings in schizophrenia, major affective disorder, and obsessive-compulsive disorder. Intended to bring us closer to our goals of early detection of, more specific treatments for, and, ultimately, prevention of psychiatric illness, this in-depth yet concise volume on the research and practice of neuropsychiatry will find a wide audience among students, residents, and clinicians.

Feminizing the Fetish Emily Apter 2018-03-15 Shoes, gloves, umbrellas, cigars that are not just objects—the topic of fetishism seems both bizarre and inevitable. In this venturesome and provocative book, Emily Apter offers a fresh account of the complex relationship between representation and sexual obsession in turn-of-the-century French culture. Analyzing works by authors in the naturalist and realist traditions as well as making use of documents from a contemporary medical archive, she considers fetishism as a cultural artifact and as a subgenre of realist fiction. Apter traces the web of connections among fin-de-siècle representations of perversion, the fiction of pathology, and the literary case history. She explores in particular the theme of "female fetishism" in the context of the feminine culture of mourning, collecting, and dressing.

The Cambridge History of Medieval Monasticism in the Latin West Alison I. Beach 2020-01-09 Monasticism, in all of its variations, was a feature of almost every landscape in the medieval West. So ubiquitous were religious women and men throughout the Middle Ages that all medievalists encounter monasticism in their intellectual worlds. While there is enormous interest in medieval monasticism among Anglophone scholars, language is often a barrier to accessing some of the most important and groundbreaking research emerging from Europe. The Cambridge History of Medieval Monasticism in the Latin West offers a comprehensive treatment of medieval monasticism, from Late Antiquity to the end of the Middle Ages. The essays, specially commissioned for this volume and written by an international team of scholars, with contributors from Australia, Belgium, Canada, England, France, Germany, Italy, the Netherlands, Spain, Switzerland, and the United States, cover a range of topics and themes and represent the most up-to-date discoveries on this topic.

Media Manifestos Régis Debray 1996 In this volume Régis Debray sums up over a decade of his research and writing on the evolution of subjects of communication and the technologically transmitted interventions of the modern intelligentsia in France. Media Manifestos announces the battle-readiness of a new sub-discipline of the sciences humaines: "mediology." Scion of that semiology of the sixties linked with the names of Roland Barthes and Umberto Eco and affiliated trans-Atlantically to the semiotics of C.S. Peirce and media analyses of Marshall McLuhan ("media is message"). "mediology" is in dialectical revolt against its parent thought-system. Determined not to lapse back into the uncritical empiricism and psychologism with which semiology broke, mediology is just as resolved to dispel the cult or illusion of the signifier as the be-all-and-end-all, slough off the scholasticism of the code, and recover the world in all its mediatized materiality. In this enterprise its ally is the work of French historians of mentalités, of the hard and evolutionary sciences, and of the technologies of transmission (from stylus and clay to quill and parchment to press and paper to mouse and screen). Written with Debray's customary brio, Media Manifestos is no mere contribution to the vogue of "media studies." It remains steeped in the intellectual culture of Louis Althusser and Michel Foucault, indebted to the neolithic anthropology of Leroi-Gourhan and the study of science and technology of Serres and Latour, informed by the material histories of the Annales school, yet plugged into the audiovisual culture of today's "videosphere" (as against the printerly "graphosphere" of yesterday, and the scriptorially "logosphere" of the day before that). Debray's work turns a neologism ("mediology") into a tool-kit with which to rethink the whole business of mediation from the city-state to the internet.

A Thesaurus of English Word Roots Horace Gerald Danner 2014-03-27 Horace G. Danner's *A Thesaurus of English Word Roots* is a compendium of the most-used word roots of the English language. As Timothy B. Noone notes in his foreword: "Dr. Danner's book allows you not only to build up your passive English vocabulary, resulting in word recognition knowledge, but also gives you the rudiments for developing your active English vocabulary, making it possible to infer the meaning of words with which you are not yet acquainted. Your knowledge can now expand and will do so exponentially as your awareness of the roots in English words and your corresponding ability to decode unfamiliar words grows apace. This is the beginning of a fine mental linguistic library: so enjoy!" In *A Thesaurus of English Word Roots*, all word roots are listed alphabetically, along with the Greek or Latin words from which they derive, together with the roots' original meanings. If the current meaning of an individual root differs from the original meaning, that is listed in a separate column. In the examples column, the words which contain the root are then listed, starting with their prefixes, for example, dysacusia, hyperacusia. These root-starting terms then are followed by terms where the root falls behind the word, e.g., acouesthesia and acoumeter. These words are followed by words where the root falls in the middle or the end, as in such terms as bradyacusia and odynacosis.. In this manner, *A Thesaurus of English Word Roots* places the word in as many word families as there are elements in the word. This work will interest linguists and philologists and anyone interested in the etymological aspects of English language.

Paratextualizing Games Benjamin Beil 2021-11-30 Gaming no longer only takes place as a >closed interactive experience< in front of TV screens, but also as broadcast on streaming platforms or as cultural events in exhibition centers and e-sport arenas. The popularization of new technologies, forms of expression, and online services has had a considerable influence on the academic and journalistic discourse about games. This anthology examines which paratexts gaming cultures have produced - i.e., in which forms and formats and through which channels we talk (and write) about games - as well as the way in which paratexts influence the development of games. How is knowledge about games generated and shaped today and how do boundaries between (popular) criticism, journalism, and scholarship have started to blur? In short: How does the paratext change the text?
