Positive School Leadership Joseph F. Murphy 2018 This landmark book translates positive and asset-based understandings of organizations to develop a powerful model of school leadership that is grounded in both existing research and the complexities of life in schools. The authors—both senior scholars in educational leadership—apply insights from positive psychology to the role and function of educational leaders. The Positive School Leadership (PSL) model draws on the strengths of relationships among staff and the broader school community to communicate and instill shared values and a common mission. This book builds a compelling case for creating a more inclusive, less “mechanistic” approach to leadership. Designed to engage both the hearts and minds of readers, the text is organized around reflective questioning of educational practice and current assumptions about the purposes and goals of leadership in schools. “This integrated theory of leadership is compelling, useable, and grounded in research . . . an essential and inspiring read.” —Michelle D. Young, University Council for Educational Administration “Murphy and Louis offer a hopeful vision of leadership for those facing the enormous challenges of school improvement.” —Daniel L. Duke, University of Virginia “Let the renewal of leadership and organizations begin, and let it be guided by this fine body of work.” —Alan J. Daly, University of California, San Diego “In a world of education reforms that have fallen short of expectations, Murphy and Louis make a strong case that positive leadership can create the foundation for sustainable change.” —Philip Hallinger, Mahidol University

Promoting the Educational Success of Children and Youth Learning English National Academies of Sciences, Engineering, and Medicine 2017-08-25 Educating dual language learners (DLLs) and English learners (ELs) effectively is a national challenge with consequences both for individuals and for American society. Despite their linguistic, cognitive, and social potential, many ELs—who account for more than 9 percent of enrollment in grades K-12 in U.S. schools—are struggling to meet the requirements for academic success, and their prospects for success in postsecondary education and in the workforce are jeopardized as a result. *Promoting the Educational Success of Children and Youth Learning English: Promising Futures* examines how evidence based on research relevant to the development of DLLs/ELs from birth to age 21 can inform education and health policies and related practices that can result in better educational outcomes. This report makes recommendations for policy, practice, and research and data collection focused on addressing the challenges in caring for and educating DLLs/ELs from birth to grade 12.

The Skydiving Beavers Susan Wood 2017-04-15 Just after World War II, the people of McCall, Idaho, found themselves with a problem on their hands. McCall was a lovely resort community in Idaho's backcountry with mountain views, a sparkling lake, and plenty of forests. People rushed to build roads and homes there to enjoy the year-round outdoor activities. It was a beautiful place to live. And not just for humans. For centuries, beavers had made the region their home. But what's good for beavers is not necessarily good for humans, and vice versa. So in a unique conservation effort, in 1948 a team from the Idaho Fish and Game Department decided to relocate the McCall beaver colony. In a daring experiment, the team airdropped seventy-six live beavers to a new location. One beaver, playfully named Geronimo, endured countless practice drops, seeming to enjoy the skydives, and led the way as all the beavers parachuted into their new home. Readers and nature enthusiasts of all ages will enjoy this true story of ingenuity and determination.

Exploring School- and Community-level Factors Associated with a Reduction in Obesity in an Elementary School District 2016 The literature of childhood obesity abatement efforts have focused on individual behavior modifications, but fewer studies focus on environmental-level interventions associated with

obesity prevention. Thus, the study aimed to answer the research question: What school and community factors are associated with a reduction in obesity in a school district? Both the Social Ecological Model and Social Cognitive Theory provide the theoretical framework for the current study. The current study focused on the individual schools of Chula Vista Elementary School District (CVESD). The study outcome was the proportion decrease of obese students between academic years 2010 and 2014. Hypothesis 1 of the study states that each CVESD school would observe a significant change in the proportion of obese students from the study time period of 2010 to 2014. Hypothesis 2 states that CVESD schools with an above average proportion of free meal eligible students were positively associated with the outcome. Finally, Hypothesis 3 states that schools in school attendance zones with an above-average proportion of the population with no high school diploma would be positively associated with the outcome between the two time observations. The primary explanatory variable was the proportion of students in a school who qualify for free meals. Census block group data of the U.S. Census were developed into community factors through spatial analyses. The final sample of schools was $N = 40$ after an exclusionary process. A series of statistical analyses were performed, including paired sample t-tests. The school and community variables were dichotomized by the mean to perform one-way ANOVAs. A statistically significant change in obesity was observed among CVESD schools between 2010 and 2014 (p

Driving Action and Progress on Obesity Prevention and Treatment National Academies of Sciences, Engineering, and Medicine 2017-06-02 After decades of increases in the obesity rate among U.S. adults and children, the rate recently has dropped among some populations, particularly young children. What are the factors responsible for these changes? How can promising trends be accelerated? What else needs to be known to end the epidemic of obesity in the United States? To examine these and other pressing questions, the Roundtable on Obesity Solutions, of the National Academies of Sciences, Engineering, and Medicine, held a workshop in September 2016. The workshop brought together leaders

Comprehension [Grades K-12] Douglas Fisher 2020-08-20 Radically change the way students learn from texts, extending beyond comprehension to critical reasoning and problem solving. Is your reading comprehension instruction just a pile of strategies? There is no evidence that teaching one strategy at a time, especially with pieces of text that require that readers use a variety of strategies to successfully negotiate meaning, is effective. And how can we extend comprehension beyond simple meaning? Bestselling authors Douglas Fisher, Nancy Frey, and Nicole Law propose a new, comprehensive model of reading instruction that goes beyond teaching skills to fostering engagement and motivation. Using a structured, three-pronged approach—skill, will, and thrill—students learn to experience reading as a purposeful act and embrace struggle as a natural part of the reading process. Instruction occurs in three phases: Skill. Holistically developing skills and strategies necessary for students to comprehend text, such as monitoring, predicting, summarizing, questioning, and inferring. Will. Creating the mindsets, motivations, and habits, including goal setting and choice, necessary for students to engage fully with texts. Thrill. Fostering the thrill of comprehension, so that students share their thinking with others or use their knowledge for something else. Comprehension is the structured framework you need to empower students to comprehend text and take action in the world.

Teaching with Poverty in Mind Eric Jensen 2010-06-16 In *Teaching with Poverty in Mind: What Being Poor Does to Kids' Brains and What Schools Can Do About It*, veteran educator and brain expert Eric Jensen takes an unflinching look at how poverty hurts children, families, and communities across the United States and demonstrates how schools can improve the academic achievement and life readiness of economically disadvantaged students. Jensen argues that although chronic exposure to poverty can result in detrimental changes to the brain, the brain's very ability to adapt from experience means that poor children can also experience emotional, social, and academic success. A brain that is susceptible to adverse environmental effects is equally susceptible to the positive effects of rich, balanced learning environments and caring relationships that build students' resilience, self-esteem, and character. Drawing from research, experience, and real school success stories, *Teaching with Poverty in Mind* reveals * What poverty is and how it affects students in school; * What drives change both at the macro level (within schools and districts) and at the micro level (inside a student's brain); * Effective strategies from those who have succeeded and ways to replicate those best practices at your own school; and * How to engage the resources necessary to make change happen. Too often, we talk about change while maintaining a culture of excuses. We can do better. Although no magic bullet can offset the grave challenges faced daily by disadvantaged children, this timely resource shines a spotlight on what matters most, providing an inspiring and practical guide for enriching the minds and lives of all your students.
