**AMLS German: Ein Beurteilungsbasierter Ansatz** NAEMT 2018-08-30 Advanced Medical Life Support (AMLS) ist das führende Konzept für die akutmedizinische Versorgung von internistischen und neurologischen Patienten. Es richtet sich an alle an der Behandlung von nicht-traumatologischen Notfällen beteiligten Berufsgruppen - vom Rettungssanitäter, Notfallsanitäter und Notarzt am Notfallort bis zum Pflegepersonal und Arzt in der Notaufnahme. Ziel ist eine rasche Einschätzung des Patienten bezüglich Behandlungsdringlichkeit und sofort notwendigen Maßnahmen („treat first what kills first“). Außerdem werden Differentialdiagnosen strukturiert erarbeitet, um die beste Therapie und geeignete Zieleinrichtung auszuwählen. Was bietet die zweite deutsche Auflage? Patientenversorgung „state-of-the-art“: Die aktuelle AMLS-Edition berücksichtigt alle relevanten gültigen Leitlinien und neuesten Forschungsergebnisse. Sowohl Berufsanfänger als

auch „alte Hasen“ aller Berufsgruppen profitieren von der Struktur und Aktualität des Konzepts und dieses Buches. Wiederholungsfragen sowie Zusammenfassungen der Kapitel und Putting It All Together-Abschnitte untermauern Schlüsselkonzepte und verknüpfen Informationen, um die Leser und Kursteilnehmer beim Lernen zu unterstützen. Szenarien bieten einen realistischen Kontext, um das Erlernte anzuwenden und anhand eines Lösungsvorschlags seinen Wissenszuwachs zu überprüfen. Warum AMLS? Der Vorteil des Konzepts ist die klare Struktur in der Patientenbeurteilung. Sie hilft, in schwierigen Notfallsituationen einen kühlen Kopf zu bewahren oder auch bei zunächst unklarem Beschwerdebild zu einer Verdachtsdiagnose zu finden und entsprechende Maßnahmen einzuleiten. Gleichzeitig ist es ein klarer Pluspunkt, wenn alle Mitglieder des Behandlungsteams das Konzept mit seinen Abläufen kennen und so bei der Patientenversorgung an einem Strang ziehen. Das AMLS-Konzept schließt die Lücke zwischen Konzepten zur Versorgung von Trauma- und pädiatrischen Patienten sowie Reanimationskursen. Warum dieses Buch? Dieses Buch ist das offizielle Kursbuch zu den AMLSKursen, welche 1999 von der National Association of Emergency Medical Technicians (NAEMT) zusammen mit der National Association of EMS Physicians (NAEMSP) entwickelt wurden. Mittlerweile sind AMLS-Kurse weltweit etabliert, seit 2010 auch in Deutschland mit einer kontinuierlich wachsenden Zahl von Anwendern.

**Computer Aided Verification** Ed Brinksma 2003-08-02 This volume contains the proceedings of the conference on Computer Aided Verification (CAV 2002), held in Copenhagen, Denmark on July 27-31, 2002. CAV 2002 was the 14th in a series of conferences dedicated to the advancement of the theory and practice of computer-assisted formal analysis methods for software and hardware systems. The conference covers the spectrum from theoretical results to concrete applications, with an emphasis on practical verification tools, including algorithms and techniques needed for their implementation. The conference has traditionally drawn contributions from researchers as well as practitioners in both academia and industry. This year we received 94 regular paper submissions out of which 35 were selected. Each submission received an average of 4 referee reviews. In addition, the CAV program contained 11 tool presentations selected from 16 submissions. For each tool presentation, a demo was given at the conference. The large number of tool submissions and presentations testifies to the liveliness of the field and its applied flavor.

**Systems of Classification in Premodern Medical Cultures** Ulrike Steinert 2020-07-21 *Systems of Classification in Premodern Medical Cultures* puts historical disease concepts in cross-cultural perspective, investigating perceptions, constructions and experiences of health and illness from antiquity to the seventeenth century. Focusing on the systematisation and classification of illness in its multiple forms, manifestations and causes, this volume examines case studies ranging from popular concepts of illness through to specialist discourses on it. Using philological, historical and anthropological approaches, the contributions cover perspectives across time from East Asian, Middle Eastern and Mediterranean cultures, spanning ancient Egypt, Mesopotamia, Greece and Rome to Tibet and China. **Fragility Fractures of the Pelvis** Pol Maria Rommens 2017-12-19 Thanks to an increasing life expectancy of our populations the number of elderly persons is steadily growing and will continue to do so. Among these, the rate of persons with illnesses and degenerative diseases is significant. The prevalence of osteoporosis is especially high in elderly women and leads to typical fracture patterns. Hip fractures, proximal humerus fractures, distal radius fractures and fractures of the vertebral column are the most common. In the last decade, we are confronted with a sharp increase of fragility fractures of the pelvis. Until now, there is no consensus on how to identify and classify these lesions and there are no guidelines for treatment and after treatment. In particular, there is no common view on which patients need an operative

treatment and which technique of osteosynthesis should be used. This book fills the gap in available literature and gives a state of the art guide to the treatment of fragility fractures of the pelvis. With the sharp increase of these fractures and the lacking consensus, Fragility Fractures of the Pelvis will become indispensable for the physicians who take care of elderly patients with this pathology. Written by a team of expert opinion leaders, the aim of this book is to contribute to the scientific discussion in this area and to help provide the optimal care for these patients.

*Healing Architecture* Christine Nickl-Weller 2013 How can architecture contribute to healing and recovery? And how do our surroundings - both built and unbuilt - influence our prospects of staying healthy?. This volume presents in detail the principles of this field of study and all the major issues involved, using a range of international projects as illustrative examples. In order to present a comprehensively interdisciplinary analysis of the subject matter, architects, medical practitioners, economists, artists, urban planners and communication scientists discuss the various aspects of 'Healing Architecture'. This book thus makes an important contribution to achieving an architecture that is attuned to people's needs and helps to promote the recovery process.
