New Directions in Teaching Secondary School Science Paul DeHart Hurd 1969 Ten years ago a massive reform movement was generated to improve science teaching in America. New science courses were developed and tested in the schools. They not only contained new subject matter, but were written in terms of goals representing a new era in science teaching. These courses were designed to be taught differently and learned differently from the science courses of the past. It is these trends in curriculum development, instruction, and learning, along with their underlying philosophical and psychological assumptions, that are critically examined

in this book.
