Artificial Intelligence for Business Jason L. Anderson 2020-04-09 Artificial Intelligence for Business: A Roadmap for Getting Started with AI will provide the reader with an easy to understand roadmap for how to take an organization through the adoption of AI technology. It will first help with the identification of which business problems and opportunities are right for AI and how to prioritize them to maximize the likelihood of success. Specific methodologies are introduced to help with finding critical training data within an organization and how to fill data gaps if they exist. With data in hand, a scoped prototype can be built to limit risk and provide tangible value to the organization as a whole to justify further investment. Finally, a production level AI system can be developed with best practices to ensure quality with not

only the application code, but also the AI models. Finally, with this particular AI adoption journey at an end, the authors will show that there is additional value to be gained by iterating on this AI adoption lifecycle and improving other parts of the organization.

Process Mining in Healthcare Ronny S. Mans 2015-03-12 What are the possibilities for process mining in hospitals? In this book the authors provide an answer to this question by presenting a healthcare reference model that outlines all the different classes of data that are potentially available for process mining in healthcare and the relationships between them. Subsequently, based on this reference model, they explain the application opportunities for process mining in this domain and discuss the various kinds of analyses that can be performed. They focus on organizational healthcare processes rather than medical treatment processes. The combination of event data and process mining techniques allows them to analyze the operational processes within a hospital based on facts, thus providing a solid basis for managing and improving

processes within hospitals. To this end, they also explicitly elaborate on data quality issues that are relevant for the data aspects of the healthcare reference model. This book mainly targets advanced professionals involved in areas related to business process management, business intelligence, data mining, and business process redesign for healthcare systems as well as graduate students specializing in healthcare information systems and process analysis.

A Guide to the Procurement of Privately Financed Projects Douglas Lamb 2004 A guide to the procurement of privately financed projects: an indicative assessment of the procurement process outlines the concept of privately financed projects (PFP) that can be used for both public-private and private-private interactions. Utilising models from many countries the guide develops a robust procurement system applicable to PFP and project finance in both the EU and overseas. This guide provides a systematic approach for the preparation and evaluation of privately financed projects (PFP) and services. It is intended to assist both the 'Principal' (often a public body) and the 'Promoter' (private body) at each phase of the procurement process, from inception through to financial closure. Principals using this guide should be able to adapt the private finance procurement process for their specific organisation and business sector. Moreover, in the case of the promoting organisation, the guide provides an appreciation of the steps that occur and the various processes undertaken and the associated costs of bidding. A guide to the procurement of privately financed projects: an indicative assessment of the procurement process provides an invaluable understanding of the critical facets involved in PFP and suggests frameworks for developing objective orientated procurement elements.

MIMED Forum IV Beyhan Bolak Hisarligil 2014-08-11 This book is the outcome of one of the Forum Series on Architectural Education, organized by the Architectural Education Association of Turkey (MIMED) on the theme of "Flexibility in Architecture." At Forum IV, the architectural education platform was cross-examined, new ideas and experiences were shared, and the potentials of "regeneration" were discovered. The notion of flexibility in architectural education is the subject of fresh and vital debate which is based on whether it is achieved by the inner dynamics of architecture, or the external dynamics. However, this debate seems null and void since the dynamics of both sides seem to necessitate flexibility in architectural education at almost the same level. Hence the attitude that the prerequisite for creating flexibility according to the inner dynamics of architecture depends on the protection of architectural education from the coercive effects of external dynamics is no longer a relevant issue. Furthermore, architectural education as a role model in such a debate becomes more important, not only in a monotyping global context, but also in the local social context as well. Herein lies a fundamental dichotomy arising from the fact that because of globalization

curricula may face the risk of becoming uniform. Any effort to overcome this dichotomy in such a debate seems vital. Then, the question arises whether such a dichotomy, which turns architectural education from an autonomous discipline into a quasi-autonomous one, transforms architectural education into a rather political issue. If the autonomous nature of architectural education resists globalization, the question of the manner in which this resistance occurs and what impact it will have on architectural education seems of the utmost importance. The volume begins with a preface by Gulsun Saglamer, President of MIMED. Contributors include Juhani Pallasmaa, Kim Dovey, Kojin Karatani, Herman Neuckermans, Conall Ó Catháin, Mark Olweny, Ugur Tanyeli, Ferhan Yurekli, Gulsun Saglamer, Fatma Erkok, Rengin Unver, Cigdem Polatoglu, S. Procurement of Works 2000 These Standard Prequalification Documents serve as a guide for those wanting to prequalify to bid on large contracts for projects financed by the World Bank. Qualifying as a bidder is separate from the bid evaluation process. Before invitations to bid on large or especially complex works projects are issued, a process of prequalification is required to select competent bidders. This document helps bidders through the prequalification process. To simplify presentation by applicants for prequalification, standard forms have been prepared for the submission of relevant information. Guidance notes and examples are provided for the implementing agency making the evaluation. Annexes give information about prequalification that are likely to be of interest to potential bidders on World Bank projects. NOTE: This replaces Standard Prequalification Document: Procurement of Works (September 1999),
