Changing the Ways We Work Nils Mårtensson 1998 This book highlights the effects of an increasing use of information technology, IT, in manufacturing. Mainly, focus is on the changes in organisation, in working procedures and in the demands on the capabilities of the personnel, both on the shop floor and the engineering and management levels. It disseminates information from the research and development carried out under ESPRIT's Integration in Manufacturing domain as well as from other activities in similar domains in industry and academia. A particular focus is on giving an overview and resume of work

undertaken in the Third and Fourth Research Framework Programmes of ESPRIT.

PROFIBUS Manual Max Felser 2012-08-09 In the last 20 years I have been personally involved with PROFIBUS: teaching it at the University, working on projects and leading workshops for industry. During this time, various descriptions and guides to different aspects of PROFIBUS were developed. I was helped in this by the contacts I had with industry and a range of experts in my capacity as chairman of PROFIBUS Switzerland and head of the PROFIBUS Competence Centre (PICC) at the Bern University of Applied Sciences. I have now brought these documents together in the form of a manual. Its purpose is to simplify entry to the world of PROFIBUS for a wider public. Now I generated an electronic book version with active links for the usage on iPad or Android tablet computers.

Profibus PA Christian Diedrich 2007 The book PROFIBUS PA by Christian Diedrich, Thomas Bangemann and several co-authors is available now in a revised and updated English version. This book is a must for all, who need in-depth information about PROFIBUS in the process industries. It is just as useful for developers of PA devices as for planners, endusers or maintenance staff. The introductory chapters give an overview about the fundamental functionality of process devices with PROFIBUS PA interface and the general automation principles in process engineering and especially in hybrid applications. The transmission and installation technology with special consideration of the ex zones existing in chemical plants are treated in detail, including the MBP transmission and the FISCO concept which both play a special role in process automation with fieldbusses. After the description of the PROFIBUS DP - protocol, which is the basis of all PROFIBUS communication, the profile PA Devices, developed particularly for process automation, is introduced. The current amendments of the PA-profile, "PROFIsafe for PA Devices, Condensed Status and Diagnostic Messages", based on the VDI/VDE/NAMUR/WIB 2650 guideline, and "Identification and Maintenance Functions" are comprehensively considered. Chapters for device integration, device development and interoperability testing as well as a glossary round out the contents of this book and make it an indispensable reference for experienced engineers as well as for newcomers to the field of process automation.

Transition Towards Energy Efficient Machine Tools André Zein 2012-12-16 Energy efficiency represents a

cost-effective and immediate strategy of a sustainable development. Due to substantial environmental and economic implications, a strong emphasis is put on the electrical energy requirements of machine tools for metalworking processes. The improvement of energy efficiency is however confronted with diverse barriers, which sustain an energy efficiency gap of unexploited potential. The deficiencies lie in the lack of information about the actual energy requirements of machine tools, a minimum energy reference to quantify improvement potential and the possible actions to improve the energy demand. Therefore, a comprehensive concept for energy performance management of machine tools is developed which guides the transition towards energy efficient machine tools. It is structured in four innovative concept modules, which are embedded into step-by-step workflow models. The capability of the performance management concept is demonstrated in an automotive manufacturing environment. The target audience primarily comprises researchers and practitioners challenged to enhance energy efficiency in manufacturing. The book may also be beneficial for graduate students who want to specialize in this field.

Advances in Computer, Information, and Systems Sciences, and Engineering Khaled Elleithy 2007-06-06
The conference proceedings of: International Conference on Industrial Electronics, Technology & Automation (IETA 05) International Conference on Telecommunications and Networking (TeNe 05) International Conference on Engineering Education, Instructional Technology, Assessment, and E-learning (EIAE 05) include a set of rigorously reviewed world-class manuscripts addressing and detailing state-of-the-art research projects in the areas of: Industrial Electronics, Technology and Automation, Telecommunications, Networking, Engineering Education, Instructional Technology and e-Learning. The three conferences, (IETA 05, TENE 05 and EIAE 05) were part of the International Joint Conference on Computer, Information, and System Sciences, and Engineering (CISSE 2005). CISSE 2005, the World's first Engineering/Computing and Systems Research E-Conference was the first high-caliber Research Conference in the world to be completely conducted online in real-time via the internet. CISSE received 255 research paper submissions and the final program included 140 accepted papers, from more than 45 countries. The whole concept and format of CISSE 2005 was very exciting and ground-breaking. The powerpoint presentations, final paper manuscripts and time schedule for live presentations over the web had been available for 3 weeks prior to the start of the conference for all registrants, so they could pick and choose the presentations they want to attend and think about questions that they might want to ask. The live audio presentations were also recorded and are part of the permanent CISSE archive, which

includes all power point presentations, papers and recorded presentations. All aspects of the conference were managed on-line; not only the reviewing, submissions and registration processes; but also the actual conference. Conference participants - authors, presenters and attendees - only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground-breaking conference. The on-line structure of this high-quality event allowed academic professionals and industry participants to contribute work and attend world-class technical presentations based on rigorously refereed submissions, live, without the need for investing significant travel funds or time out of the office. Suffice to say that CISSE received submissions from more than 50 countries, for whose researchers, this opportunity presented a much more affordable, dynamic and well-planned event to attend and submit their work to, versus a classic, on-the-ground conference. The CISSE conference audio room provided superb audio even over low speed internet connections, the ability to display PowerPoint presentations, and cross-platform compatibility (the conferencing software runs on Windows, Mac, and any other operating system that supports Java). In addition, the conferencing system allowed for an unlimited number of participants, which in turn granted CISSE the opportunity to allow all participants to attend all presentations, as opposed to limiting the number of available seats for each session. The implemented conferencing technology, starting with the submission & review system and ending with the online conferencing capability, allowed CISSE to conduct a very high quality, fulfilling event for all participants. Expanded coverage includes descriptions of overseas manufacturer's products and concepts, model-based optimization in control theory, new major inventions and innovations in control valves, and a full chapter devoted to safety. With more than 2000 graphs, figures, and tables, this all-inclusive encyclopedic volume replaces an entire library with one authoritative reference. The fourth edition brings the content of the previous editions completely up to date, incorporates the developments of the last decade, and broadens the horizons of the work from an American to a global perspective. Béla G. Lipták speaks on Post-Oil Energy Technology on the AT&T Tech Channel.
