Augustan Poetry and the Roman Republic Joseph Farrell 2013-06-13 Augustan Poetry and the Roman Republic explores the liminal status of the Augustan period, with its inherent tensions between a rhetoric based on the idea of res publica restituta and the expression of the need for a radical renewal of the Roman political system. It attempts to examine some of the ways in which the Augustan poets dealt with these and other related issues by discussing the many ways in which individual texts handle the idea of the Roman Republic. Focusing on the works of the major Augustan poets, Vergil, Horace, Propertius, and Ovid, the contributions in this collection look at the under-studied aspect of their poetry, namely the way in which they constructed and investigated images of the Roman Republic and the Roman past.

Mechanism Design Rakesh V. Vohra 2011-05-09 Mechanism design is an analytical framework for thinking clearly and carefully about what exactly a given institution can achieve when the information necessary to make decisions is dispersed and privately held. This analysis provides an account of the underlying mathematics of mechanism design based on linear programming. Three advantages characterize the approach. The first is simplicity: arguments based on linear programming are both elementary and transparent. The second is unity: the machinery of linear programming provides a way to unify results from disparate areas of mechanism design. The third is reach: the technique offers the ability to solve problems that appear to be beyond solutions offered by traditional methods. No claim is made that the approach advocated should supplant traditional mathematical machinery. Rather, the approach represents an addition to the tools of the economic theorist who proposes to understand economic phenomena through the lens of mechanism design.
