Learning Factories Eberhard Abele 2018-10-10 This book presents the state of the art of learning factories. It outlines the motivations, historic background, and the didactic foundations of learning factories. Definitions of the term learning factory and a corresponding morphological model are provided as well as a detailed overview of existing learning factory approaches in industry and academia, showing the broad range of different applications and varying contents. Learning factory best-practice examples are presented in detailed and structured manner. The state of the art of learning factories curricula design and their use to enhance learning and research as well as potentials and limitations are presented. Further research priorities and innovative learning factory concepts to overcome current barriers are offered. While today numerous learning factories have been built in industry (big automotive companies, pharma companies, etc.) and academia in the last decades, a comprehensive handbook for the scientific community and practitioners alike is still missing. The book addresses therefore both researchers in production-related areas, that want to conduct industry-relevant research and education, as well as managers and engineers in industry, who are searching for an effective way to train their employees. In addition to this, the learning factory concept is also regarded as an innovative learning concept in the field of didactics.

Changing Things - Moving People Ruth Kaufmann-Hayoz 2001-06 "The present work originates in a broad inter- and trans-disciplinary cooperation among academic scientists, researchers in private consultancy firms, and beneficiaries of the research, i.e., decision-makers in politics, public administration, companies, and non-governmental organisations. Rethinking Food and Agriculture Ammir Kassam 2020-10-18 Given the central role of the food and agriculture system in driving so many of the connected ecological, social and economic threats and challenges we currently face, Rethinking Food and Agriculture reviews, reassesses and reimagines the current food and agriculture system and the narrow paradigm in which it operates. Rethinking Food and Agriculture explores and uncovers some of the key historical, ethical, economic, social, cultural, political, and structural drivers and root causes of unsustainability, degradation of the agricultural environment, destruction of nature, short-comings in science and knowledge systems, inequality, hunger and food insecurity, and disharmony. It reviews efforts towards 'sustainable development', and reassesses whether these efforts have been implemented with adequate responsibility, acceptable societal and environmental costs and optimal engagement to secure sustainability, equity and justice. The book highlights the many ways that farmers and their communities, civil society groups, social movements, development experts, scientists and others have been raising awareness of these issues, implementing solutions and forging 'new ways forward', for example towards paradigms of agriculture, natural resource management and human nutrition which are more sustainable and just. Rethinking Food and Agriculture proposes ways to move beyond the current limited view of agro-ecological sustainability towards overall sustainability of the food and agriculture system based on the principle of 'inclusive responsibility'. Inclusive responsibility encourages ecosystem sustainability based on agro-ecological and planetary limits to sustainable resource use for production and livelihoods. Inclusive responsibility also places importance on quality of life, pluralism, equity and justice for all and emphasises the health, well-being, sovereignty, dignity and rights of producers, consumers and other stakeholders, as well as of nonhuman animals and the natural world. Explores some of the key drivers and root causes of unsustainability , degradation of the agricultural environment and destruction of nature Highlights the many ways that different stakeholders have been forging 'new ways forward' towards alternative paradigms of agriculture, human nutrition and political economy, which are more sustainable and just Proposes ways to move beyond the current unsustainable exploitation of natural resources towards agroecological sustainability and overall sustainability of the food and agriculture system based on 'inclusive responsibility'

Industrieentwicklung / Promotion of Industry: An Anglo-German Dialogue Franz Bosbach 2009-12-22 Die Wettbewerbsfähigkeit der eigenen Industrie war (spätestens) seit dem 19. Jahrhundert immer wieder Gegenstand sorgenvoller Blicke auf eigene Schwächen und fremde Stärken. Am Beispiel britischer und deutscher Debatten der jüngeren Vergangenheit untersucht der Band Erfolg und Misserfolg unterschiedlicher Strategien von Maßnahmen zur Steigerung individueller Leistungsbereitschaft bis hin zu großen Reformprojekten wie dem "Thatcherismus".

Windenergie und Logistik Roger Heidmann 2014-11-17 Die Windenergiebranche ist ein etabliertes Industriesegment im schweren Maschinen- und Anlagenbau, das von vielen kleinen, mittelständischen und oftmals familiengeführten Unternehmen geprägt ist. Gerade in diesem Segment ist die Logistik ausschlaggebend für die Wettbewerbsfähigkeit der Produkte. Neue Märkte sowie weiterentwickelte und leistungsstärkere Anlagen erzeugen Komponenten mit geringen Losgrößen, die oftmals nur noch bedingt straßentransportfähig sind. Der Fokus dieser Arbeit liegt deshalb auf der Losgröße 1. Die Logistik wird entlang des Geschäftsprozesses beschrieben, um den Wissenstransfer zwischen Theorie und Praxis im relativ neuen Markt der Windenergie zu stärken. Der Autor konzentriert sich somit weniger auf die technikorientierten Aspekte der Logistik, sondern auf die Aspekte, die die Schnittstellen zur Technik bilden, also die Planung, die Organisation und das Management der Logistik. Weiterführend geht es auch um Wirkungszusammenhänge der Logistik, um daraus Anhaltspunkte und Gestaltungsmöglichkeiten gerade für kleine und mittlere Unternehmen abzuleiten.

Integrated Spatial and Energy Planning Gernot Stoeglehner 2016-04-02 This book focuses on spatial planning – an important determinant of energy saving and renewable energy supply. Revealing the key driving forces for spatial development supporting the shift towards energy efficiency and renewable energy supplies, it shows the importance of integrated spatial and energy planning approaches for a timely and sustainable change of energy systems, thus supporting policies of climate protection. As operating within the context of renewable energy sources is becoming a major policy issue at the international, European and national level, spatial dimensions of renewable energy systems as well as challenges, barriers and opportunities in different spatial contexts become more important. This book analyses not only the fundamental system interrelations between resources, technologies and consumption patterns with respect to energy, but also the links to the spatial context, and provides guidelines for researchers as well as practitioners in this new, emerging field. It presents innovative analytical tools to solve real-world problems and discusses the most important fields of action in integrated spatial and energy planning including planning contents, planning visions and principles as well as planning process design and planning methodology.

Management Models for the Future Jan Jonker 2009-03-02 It is evident that many organisations are in need of renovation, innovation and reinvigoration. Longstanding business paradigms and underpinning practices require critical reflection in the light of fundamental societal and business developments. Some companies are addressing these challenges, many companies are not. New functional requirements often seem to be in conflict, such as transparency, stock market performance, sustainability, innovation, responsibility, time to market, stakeholders, business rationalisation and many others. These requirements force business to revise its management model. The time is right to demonstrate how the business enterprise can be re-conceptualised, and what the challenges are of fundamental strategic choices in organising a sustainable business proposition. This book presents ten cases of organisations which have developed a management model that leads the organisation into the future.

Managing in a VUCA World Oliver Mack 2015-07-15 This book examines volatility, uncertainty, complexity and ambiguity (VUCA) and addresses the need for broader knowledge and application of new concepts and frameworks to deal with unpredictable and rapid changing situations. The premises of VUCA can shape all aspects of an organization. To cover all areas, the book is divided into six sections. Section 1 acts as an introduction to VUCA and complexity. It reviews ways to manage complexity, while providing examples for tools and approaches that can be applied. The main focus of Section 2 is on leadership, strategy and

planning. The chapters in this section create new approaches to handle VUCA environments pertaining to these areas including using the Tetralemma logics, tools from systemic structural constellation (SySt) approach of psychotherapy and organizational development, to provide new ideas for the management of large strategic programs in organizations. Section 3 considers how marketing and sales are affected by VUCA, from social media's influence to customer value management. Operations and cost management are highlighted in Section 4. This section covers VUCA challenges within global supply chains and decision-oriented controlling. In Section 5 organizational structure and process management are showcased, while Section 6 is dedicated to addressing the effects of VUCA in IT, technology and data management. The VUCA forces present businesses with the need to move from linear modes of thought to problem solving with synthetic and simultaneous thinking. This book should help to provide some starting points and ideas to deal with the next era. It should not be understood as the end of the road, but as the beginning of a journey exploring and developing new concepts for a new way of management.

Baumschlager & Eberle Carlo Baumschlager 2005 Called to Account takes a broad perspective on how financial frauds have shaped the public accounting profession by focusing on cases of fraud around the globe. Ever entertaining and educational, the book traces the development of the accounting standards and legislation put in place as a direct consequence of these epic scandals. The new edition offers updated chapters on ZZZZ Best and Arthur Andersen, plus new chapters devoted to Parmalat, Satyam, and The Great Recession. Through stories like Barry Minkow's staged construction sites and MiniScribe's fake inventory number generating computer program, "Cook Book", students will learn that fraud is nothing new, and that financial reform is heavily influenced by politics. With discussion questions and a useful chart showing instructors and students how each chapter illustrates the topics covered in other textbooks, Called to Account is the ideal companion for any class in auditing, advanced accounting or forensic accounting.

Factory Planning Manual Michael Schenk 2009-10-29 The central purpose of this book is to impart knowledge, skills and practical - plementation methods for the planning and operation of adaptable production - cilities and factories. It addresses planning methods and procedures for various types of production facility up to and including entire factories, and is aimed at practicing factory planners and students alike. The book provides facts and demonstrates practical processes using case studies for the purposes of illustration, so that ultimately skills can be acquired that make independent practical implementation and app- cation possible. It is based on up-to-the-minute practical experience and univ- sally applicable knowledge of the planning and technological design of adaptable production facilities (manufacturing and assembly) and factories. In comparison to existing, thematically-similar reference books, what is in- vative about this manual is that it provides the impulse for a more flexible pl- ning approach for the efficient design of adaptable production facilities using - sponsive, unconventional planning and organizational solutions. The book aims to provide a way of integrating

systematic and situation-driven planning methods in a meaningful way. Situation-driven planning is becoming increasingly important to production facilities in these fast-moving times of change, in particular in terms of resource and energy efficiency. Existing technical and organizational course of action in terms of resources (both human and technical) need to be selected for the specific case at hand, and changes (to workshops, products, processes and equipment) need to be managed.

Elektromobilität Mehmet Yay 2010 Elektromobilität ist Trend!

Der aktuelle Stand der Technik und der Umsetzung zeigt, dass das Zeitalter alternativer Antriebskonzepte längst begonnen hat und eine Umsetzung sofort möglich ist.

Land Ownership and Land Use Development Erwin Hepperle 2017-01-10 Across Europe, land is constantly the subject of enormous and widely varied pressures. The land we have is shrinking in area due to numerous reasons, including those that are directly related to climate change and migration. In fact all disciplines that have responsibilities for the husbandry use, management, and administration of the land are forced to address the problems of how to plan and how to utilise this increasingly valuable resource. The papers contained within this book emerge from two symposia held in 2014 and 2015, which now have been arranged along four general themes reflecting the multi-disciplinary nature of the disciplines concerned with land. The first part is dedicated to the interpretation of key terms in their context and the dissimilar conceptual approaches in the governance of different states. It is followed by papers that identify the process of decision-taking: how to organize and co-operate. One large section addresses the identification of land pattern changes and the reason for it. The papers in the final cluster deal with the general theme of strategies and measures used to steer future evolution in land policies. The publication addresses various needs that have to be balanced: the tasks of living space in the face of societal and demographic changes, infrastructure supply, challenges of an increasingly urbanised region, food production, 'green energy', natural hazards, habitats and cultural landscapes protection.

A Geography Of Time Robert N. Levine 2008-08-01 In this engaging and spirited book, eminent social psychologist Robert Levine asks us to explore a dimension of our experience that we take for granted—our perception of time. When we travel to a different country, or even a different city in the United States, we assume that a certain amount of cultural adjustment will be required, whether it's getting used to new food or negotiating a foreign language, adapting to a different standard of living or another currency. In fact, what contributes most to our sense of disorientation is having to adapt to another culture's sense of time. Levine, who has devoted his career to studying time and the pace of life, takes us on an enchanting tour of time through the ages and around the world. As he recounts his unique experiences with humor and deep insight, we travel with him to Brazil, where to be three hours late is perfectly acceptable, and to Japan, where he finds a sense of the long-term that is unheard of in the West. We visit communities in the United States and find that population size affects the pace of life—and even the pace of walking. We travel back in time to ancient Greece to examine early clocks and sundials, then move forward through the centuries to the beginnings of "clock time" during the Industrial Revolution. We learn that there are places in the world today where people still live according to "nature time," the rhythm of the sun and the seasons, and "event time," the structuring of time around happenings (when you want to make a late appointment in Burundi, you say, "I'll see you when the cows come in"). Levine raises some fascinating questions. How do we use our time? Are we being ruled by the clock? What is this doing to our cities? To our relationships? To our own bodies and psyches? Are there decisions we have made without conscious choice? Alternative tempos we might prefer? Perhaps, Levine argues, our goal should be to try to live in a "multitemporal" society, one in which we learn to move back and forth among nature time, event time, and clock time. In other words, each of us must chart our own geography of time. If we can do that, we will have achieved temporal prosperity.

Abgerundet wird der Band durch die Darstellung der Erneuerbaren-Energien-Branche in ausgewählten Ländern. Die Autoren des Buches kommen aus Kanzleien, Beratungsunternehmen, der Politik sowie der Wissenschaft, was den einzelnen Beiträgen eine tiefe Fundierung sowie praktische Relevanz verleiht. Das Werk richtet sich damit an alle, die im Projektmanagement von Erneuerbaren Energien tätig sind und die mit den internationalen Dimensionen der Branche befasst sind.

Heat Transfer Peter Böckh 2011-10-12 The book provides an easy way to understand the fundamentals of heat transfer. The reader will acquire the ability to design and analyze heat exchangers. Without extensive derivation of the fundamentals, the latest correlations for heat transfer coefficients and their application are discussed. The following topics are presented - Steady state and transient heat conduction - Free and forced convection - Finned surfaces - Condensation and boiling - Radiation - Heat exchanger design - Problem-solving After introducing the basic terminology, the reader is made familiar with the different mechanisms of heat transfer. Their practical application is demonstrated in examples, which are available in the Internet as MathCad files for further use. Tables of material properties and formulas for their use in programs are included in the appendix. This book will serve as a valuable resource for both students and engineers in the industry. The author's experience indicates that students, after 40 lectures and exercises of 45 minutes based on this textbook, have proved capable of designing independently complex heat exchangers such as for cooling of rocket propulsion chambers, condensers and evaporators for heat pumps.

Methodik zur Steuerung modularer Produktbaukästen Charlotte-Angela Hoffmann
2017-12-20 Charlotte-Angela Hoffmann konzipiert ein Prozess- und Vorgehensmodell zur Steuerung von Baukastenprojekten am Beispiel der Automobilindustrie. Die kontinuierliche Weiterentwicklung des modularen Baukastens führt dazu, dass Strukturen und wesentliche Kernprozesse mit ihren Eskalations- und Entscheidungswegen zu modifizieren sind. Die induktiv zu erstellende Methodik der Autorin basiert auf einer detaillierten Analyse der Steuerungsprozesse in Bezug auf den Produktentstehungsprozess. Die exemplarische Anwendung auf ein ausgewähltes Pilotprojekt der Schiffbauindustrie ermöglicht der Autorin anhand der praxisnahen Reflexion des Konzepts eine Validierung der Methodik. Abschließend bietet sie eine wissenschaftliche Bewertung, woraus eine Einordnung in die Methodensystematik und eine Bewertung der Anwendbarkeit resultiert.

Batterien als Energiespeicher Eckhard Fahlbusch 2015-06-30 Batterien gewinnen als Energiespeicher zunehmend an Bedeutung. Sie eignen sich sowohl im privaten als auch im gewerblichen und kommunalen Bereich als Zwischenspeicher für den Solar- und Windstrom. Dieser Band macht mit der Vielfalt der Batterietechnologien bekannt und beschreibt ihre Anwendung in mobilen und stationären Bereichen. Außerdem geht es um die Bedeutung und die Notwendigkeit des Recyclings von Batterien in Hinblick auf Ressourcenschonung und Ressourcensicherheit. Inhaltliche Schwerpunkte: Die Energiewende in Deutschland (Erstellung einer fairen Kosten-Nutzen-Rechnung des deutschen Energiemixes; Appell für einen fairen Wettbewerb; Chancen und Risiken des Generationenprojekts) // Speicherung als Schlüsseltechnologie (Batterien im Fokus) neben Erneuerbaren Energien, Energieeffizienz und Elektromobilität // Status Quo der Batteriespeichertechnologien aus wissenschaftlicher und industrieller Sicht.
