The Future of Nursing Institute of Medicine 2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses,

increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Transforming the Workforce for Children Birth Through Age 8 National Research Council 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning,

shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

School Reform in an Era of Standardization Ian Hardy 2020-12-30 School Reform in an Era of Standardization explores how teachers and school-based administrators navigate the processes of accountability and standardization in schooling systems and settings. It provides clear insights into how the work and learning of teachers and students in schools have been dramatically reconstituted by increased pressures of external, political scrutiny and accountability. The book reveals in detail the nature and effects of

standardization processes upon schools and schooling systems. Specifically, it shows how curriculum development, teaching and assessment practices have all been recalibrated under conditions of increased external scrutiny of teacher and student work and learning, and how such processes are manifest in curriculum dominated by attention to literacy and numeracy, more 'scripted' pedagogies and standardized testing. However, the research not only elaborates the detrimental effects of such processes, but also how those responsible for educating in schools – teachers, heads of curriculum, deputy-principals and principals – have responded proactively by interpreting, interrogating and challenging these conditions. In this way, it provides resources for hope – evidence of what are described as more 'authentic accountabilities' – and at the same time it provides a clear portrait of the difficulty of fostering substantive curriculum, teaching and assessment reform during an era of increasingly reductive accountability processes. It will be an invaluable resource for understanding and enhancing practices in schools and school systems in the decades to come, and for giving hope to educators in the ongoing work of rebuilding trust in public education.

Evidence-Based Practice in Audiology Lena Wong 2012-02-21 Evidence based practice (EBP) has proponents in all areas of healthcare and was endorsed in a technical report in 2004 and a position statement in 2005 by the American Speech-Language-Hearing Association. Despite this, there is no text on EBP with specific application to audiology. It is particularly important in audiology, where there are various interventions to assist people with hearing impairment and a growing body of research evidence that needs to be appraised by clinicians and researchers. This comprehensive book describes the principles of EBP as they apply to the evaluation of audiologic interventions in children and adults. The reader will learn the process of EBP, as well as gain knowledge on the evidence relating to specific interventions. Evidence Based Practice in Audiology is divided into four sections. The first section describes principles of EBP, including how to evaluate evidence and how to facilitate evidence based decisions with clients. The remaining three sections provide a discussion of the best available evidence about hearing aids, cochlear implants, and other interventions. These three sections contain chapters written by leading international authors who summarize the best available evidence, highlight where further evidence is needed, and recommend how further evidence should be collected and applied in the clinic. The book ends with an appendix that contains recommended measures for the collection of evidence about different audiologic interventions. Evidence Based Practice in Audiology is a highly valued resource for students, researchers, clinical audiologists, other health professionals and policy makers. For students, the book can be used for learning about research methods and about outcomes of interventions for children and adults with hearing impairment. For researchers, the book provides a useful summary of available research on important topics in habilitation and rehabilitation and may assist them to design future research studies. For clinical audiologists, the book can help them understand what evidence is and

how this can be applied in clinical practice. Other health professionals who can benefit from this book include ENTs, pediatricians, geriatricians, GPs, nurses, and aged care workers. The book can also guide policy makers and third-party payers in their decisions about allocation of resources. The text is written with sufficient information for readers with different backgrounds and experience and careful attention has been paid to presenting complex information in an easy to understand format. Evidence Based Practice in Audiology is edited by two leading academics in research in audiological interventions. These editors have a rich clinical experience working with children and adults with hearing impairment and with other health professionals

Managing Emotions in the Workplace Neal M. Ashkanasy 2016-09-16 The modern workplace is often thought of as cold and rational, as no place for the experience and expression of emotions. Yet it is no more emotionless than any other aspect of life. Individuals bring their affective states and emotional "buttons" to work, leaders try to engender feelings of passion and enthusiasm for the organization and its mission, and consultants seek to increase job satisfaction, commitment, and trust. This book advances the understanding of the causes and effects of emotions at work and extends existing theories to consider implications for the management of emotions. The international cast of

authors examines the practical issues raised when organizations are studied as places where emotions are aroused, suppressed, used, and avoided. This book also joins the debate on how organizations and individuals ought to manage emotions in the workplace. *Managing Emotions in the Workplace* is designed for use in graduate level courses in Organizational Behavior, Human Resource Management, or Organizational Development - any course in which the role of emotions in the workplace is a central concern. Scholars and consultants will also find this book to be an essential resource on the latest theory and practice in this emerging field.

Politics and the Mediatization of School Educational Policy Grant Rodwell 2020-04-07 Despite increasing prevalence over the past three decades and a clear impact on school education policy and practice, education's connection to dog-whistle journalism and politics has not yet been fully explored. Addressing this gap, *Politics and the Mediatization of School Educational Policy* examines the emergence and current impact of dog-whistle politics and journalism on education in Australia, the US and the UK, questioning what is at stake when this political dog whistle is directed at school educational policy and practice. Exploring common targets for dog-whistling, such as teaching standards, teacher quality and specific curriculum areas, such as history, sex and health education, the book considers the broader social issues of xenophobia and racism, as well as the decline of print media and rise of digital news sources in its place, with each chapter including an in-depth discussion using peer-reviewed literature on the subject. Following the trail of dog whistles impacting in school educational policy and practice across these three countries, this book explores: To what extent is the dog-whistle dynamic embedded in school educational policy and practice? To what extent does the dog-whistle dynamic affect our understanding of school educational policy and practice? How might we explain the continued flurry of dog whistles impacting school educational policy and practice? As the phenomenon of the dog whistle intensifies both nationally and internationally, this timely and thought-provoking book is necessary reading for academics, postgraduate researchers and all members of school communities.
