The Martian: A Novel George Du Maurier 2021-03-16 "The Martian" by George Du Maurier. Published by Good Press. Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten-or yet undiscovered gems-of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

The Vision; or Hell, Purgatory, and Paradise ... Translated by the Rev. H. F. Cary. With "A Chronological View of the Age of Dante," and notes Dante Alighieri 1869

The Martian George Du Maurier 2022-09-15 "The Martian" is a semi-autobiographical novel that recounts the lives of two childhood friends, Bartholomew Josselin and Robert Maurice, beginning from their school days in Paris in the 1850s. After completing school, they return to England, where Barty spends some

time in the army but quits. His eyesight fails, and he travels seeking help with it, becoming suicidal. Several events follow after this tragedy.

Sleep Disorders and Sleep Deprivation Institute of Medicine 2006-10-13 Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patientsâ"sleep disorders reach across all ages and ethnicities. *Sleep Disorders and Sleep Deprivation* presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

The Gospel of Life Pope John Paul II 1995-04 Reaffirming the "greatness and inestimable value of human life," Pope John Paul II discusses in this encyclical letter the present-day legal, ethical, and moral threats

to life.

The Martian George Du Maurier 1897 The narrator and main character, Barty Josselin, attempts suicide after he loses his sight in one eye, prompting the appearance of Martia, the Martian, with whom he now shares his body. Du Maurier also introduces the concept of automatic writing in this novel: while Josselin sleeps, Martia writes and Josselin becomes a world-famous writer.

The Vision; Or Hell, Purgatory, and Paradise ... Translated by the Rev. Henry Francis Cary ... A New Edition, Corrected. With the Life of Dante, Chronological View of His Age, Additional Notes, and Index Dante Alighieri 1844

Prioritizing Web Usability Jakob Nielsen 2006-04-20 In 2000, Jakob Nielsen, the world's leading expert on Web usability, published a book that changed how people think about the Web—*Designing Web Usability* (New Riders). Many applauded. A few jeered. But everyone listened. The best-selling usability guru is back and has revisited his classic guide, joined forces with Web usability consultant Hoa Loranger, and created an updated companion book that covers the essential changes to the Web and usability today. *Prioritizing Web Usability* is the guide for anyone who wants to take their Web site(s) to next level and make usability a priority! Through the authors' wisdom, experience, and hundreds of real-world user tests and contemporary Web site critiques, you'll learn about site design, user experience and usability testing, navigation and search capabilities, old guidelines and prioritizing usability issues, page design and layout, content design, and more!

Acting from Shakespeare's First Folio Don Weingust 2006-09-27 Acting from Shakespeare's First Folio examines a series of techniques for reading and performing Shakespeare's plays that are based on the texts of the first 'complete' volume of Shakespeare's works: the First Folio of 1623. Do extra syllables in a line suggest how it might be played? Can Folio commas reveal character? Don Weingust places this work on Folio performance possibility within current understandings about Shakespearean text, describing ways in which these challenging theories about acting often align quite nicely with the work of the theories' critics. As part of this study, Weingust looks at the work of Patrick Tucker and his London-based Original Shakespeare Company, who have sought to discover the opportunities in using First Folio texts, acting techniques, and what they consider to be original Shakespearean performance methodologies. Weingust argues that their experimental performances at the Globe on Bankside have revealed enhanced possibilities not only for performing Shakespeare, but for theatrical practice in general.

The Bluest Eye Toni Morrison 2007 The story of Pecola Breedlove profiles an eleven-year-old African-American girl growing up in an America that values blue-eyed blondes and the tragedy that results from

her longing to be accepted.

Drive Daniel H. Pink 2011-04-05 The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of *When: The Scientific Secrets of Perfect Timing* Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That's a mistake, says Daniel H. Pink (author of *To Sell Is Human: The Surprising Truth About Motivating Others*). In this provocative and persuasive new book, he asserts that the secret to high performance and satisfaction—at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by ourselves and our world. Drawing on four decades of scientific

research on human motivation, Pink exposes the mismatch between what science knows and what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live.

Magnesium in the Central Nervous System Robert Vink 2011 The brain is the most complex organ in our body. Indeed, it is perhaps the most complex structure we have ever encountered in nature. Both structurally and functionally, there are many peculiarities that differentiate the brain from all other organs. The brain is our connection to the world around us and by governing nervous system and higher function, any disturbance induces severe neurological and psychiatric disorders that can have a devastating effect on quality of life. Our understanding of the physiology and biochemistry of the brain has improved dramatically in the last two decades. In particular, the critical role of cations, including magnesium, has become evident, even if incompletely understood at a mechanistic level. The exact role and regulation of magnesium, in particular, remains elusive, largely because intracellular levels are so difficult to routinely quantify. Nonetheless, the importance of magnesium to normal central nervous system activity is self-

evident given the complicated homeostatic mechanisms that maintain the concentration of this cation within strict limits essential for normal physiology and metabolism. There is also considerable accumulating evidence to suggest alterations to some brain functions in both normal and pathological conditions may be linked to alterations in local magnesium concentration. This book, containing chapters written by some of the foremost experts in the field of magnesium research, brings together the latest in experimental and clinical magnesium research as it relates to the central nervous system. It offers a complete and updated view of magnesium's involvement in central nervous system function and in so doing, brings together two main pillars of contemporary neuroscience research, namely providing an explanation for the molecular mechanisms involved in brain function, and emphasizing the connections between the molecular changes and behavior. It is the untiring efforts of those magnesium researchers who have dedicated their lives to unraveling the mysteries of magnesium's role in biological systems that has inspired the collation of this volume of work.
