**Tuesdays with Morrie** Mitch Albom 2007-06-29 #1 NEW YORK TIMES BESTSELLER • A special 25th anniversary edition of the beloved book that changed millions of lives—with a new afterword by the author “A wonderful book, a story of the heart told by a writer with soul.”—Los Angeles Times Maybe it was a grandparent, or a teacher, or a colleague. Someone older, patient and wise, who understood you when you were young and searching, helped you see the world as a more profound place, gave you sound advice to help you make your way through it. For Mitch Albom, that person was Morrie Schwartz, his college professor from nearly twenty years ago. Maybe, like Mitch, you lost track of this mentor as you made your way, and the insights faded, and the world seemed colder. Wouldn't you like to see that person again, ask the bigger questions that still haunt you, receive wisdom for your busy life today the way you once did when you were younger? Mitch Albom had that second chance. He rediscovered Morrie in the last months of the older man's life. Knowing he was dying, Morrie visited with Mitch in his study every Tuesday, just as they used to back in college. Their rekindled relationship turned into one final “class”: lessons in how to live. Tuesdays with Morrie is a magical chronicle of their time together, through which Mitch shares Morrie's lasting gift with the world.

The Greatest Treasure Hunt in History: The Story of the Monuments Men (Scholastic Focus) Robert M. Edsel 2019-01-29 Robert M. Edsel brings the story of his #1 NYT bestseller for adults The Monuments Men to young readers for the

first time in this dynamic, narrative nonfiction project packed with photos. Robert M. Edsel, #1 New York Times bestselling author of *The Monuments Men*, brings this story to young readers for the first time in a sweeping, dynamic adventure detailing history's greatest treasure hunt. As the most destructive war in history ravaged Europe, many of the world's most cherished cultural objects were in harm's way. *The Greatest Treasure Hunt in History* recounts the astonishing true story of 11 men and one woman who risked their lives amidst the bloodshed of World War II to preserve churches, libraries, monuments, and works of art that for centuries defined the heritage of Western civilization. As the war raged, these American and British volunteers -- museum curators, art scholars and educators, architects, archivists, and artists, known as the Monuments Men -- found themselves in a desperate race against time to locate and save the many priceless treasures and works of art stolen by Adolf Hitler and the Nazis.

*In Search of Utopia* Jan Van der Stock 2016 2016 marks exactly 500 years since the English humanist and statesman Thomas More published in the city Leuven his world-famous book *Utopia*. Leuven is celebrating this milestone with a major city festival featuring exhibitions, street art, film, music, theatre, dance, literature, lectures and city walks. The cornerstone is the international, art historical exhibition 'In Search of Utopia' at M - Museum Leuven. The festival will officially start on Monday, 26 September 2016 after a festive opening weekend on 24 and 25 September and will end on 17 January 2017. In the book 'In Search of Utopia?' the reader is introduced to the world of More and his friends, with the ideals and dreams of the times. The desire of far-away horizons and the cobweb of new sciences that patiently layed upon the reality. Magnificent works of the 15th- and 16th Century artists: Quinten Metsijs, Hans Holbein, Jan Gossaert en Albrecht Dürer are being brought together in this exciting and intriguing story. It shows in an unexceeded way the imagination of an ideal world.

**Hysteria Today** Anouchka Grose 2018-05-15 Hysteria, one of the most diagnosed conditions in human history, is also one of the most problematic. Can it even be said to exist at all? Since the earliest medical texts people have had something to say about 'feminine complaints'. Over the centuries, theorisations of the root causes have lurched from the physiological to the psychological to

the socio-political. Thanks to its dual association with femininity and with fakery, the notion of hysteria inevitably provokes questions about women, men, sex, bodies, minds, culture, happiness and unhappiness. To some, it may seem extraordinary that such a contested diagnosis could continue to merit any mention whatsoever. *Hysteria Today* is a collection of essays whose purpose is to reopen the case for hysteria and to see what relevance, if any, the term may have within contemporary clinical practice.

**Norms of Word Association** Leo Postman 2014-05-10 Norms of Word Association contains a heterogeneous collection of word association norms. This book brings together nine sets of association norms that were collected independently at different times during a 15-year period. Each chapter is a self-contained unit. The order in which the norms are presented is arbitrary, although an attempt is made to group together norms that seem to belong together. The 1952 Minnesota norms are presented first, due to "age" and in recognition of the fact that a number of the norms that follow are direct outgrowths of this work. The next three norms in this collection are responses to the Russell-Jenkins stimuli obtained from subjects representing different linguistic communities. A summary of association norms collected from British and Australian subjects are reported along with association norms from German and French college students and French workmen. Four sets of norms that are not directly related to the 1952 Minnesota collection are included. The text will be of interest to historians and researchers in the field of verbal learning and verbal behavior.

*NASA Apollo 11* Christopher Riley 2010-01-01 On July 20, 1969, US astronaut Neil Armstrong became the first man to walk on the moon. The Apollo 11 mission that carried him and his two fellow astronauts on their epic journey marked the successful culmination of a quest that, ironically, had begun in Nazi Germany thirty years before. This is the story of the Apollo 11 mission and the 'space hardware' that made it all possible. Author Chris Riley looks at the evolution and design of the mighty Saturn V rocket, the Command and Service Modules, and the Lunar Module. He also describes the space suits worn by the crew, with their special life support systems. Launch procedures are described, 'flying' the Saturn V, navigation, course correction 'burns', orbital rendezvous techniques, flying the LEM, moon landing, moon walk, take-off from the moon, and earth re-entry procedure. Includes performance data, fuels, biographies of Armstrong, Aldrin and Collins, Gene Kranz and Werner von Braun. Detailed appendices cover all of the Apollo missions, with full details of crews, spacecraft names and logos, mission priorities, moon landing sites, and the Lunar Rover.

The day drunk driver ran a stoplight and crashed into their car, his father was killed instantly, and Billy was forced to wear a brace on his crippled leg. he had hoped that when he and his mother moved to a new town he might leave the nightmare behind. But it didn't work. The memory followed him like a bad dream. Until he met Nico. From the day he first saw Nio, Billy knew he was no ordinary horse. Nico was a unicorn. A magic unicorn. And he would change Billy's life forever.

On the Origin of Myths in Catastrophic Experience, vol. 1: Preliminaries  
Marinus Anthony van der Sluijs 2019-01-01 Creation myths around the world reveal an intricate network of recurrent motifs. Many of these are counterintuitive and not widely known, describing a time when the sky was low, the stars did not yet shine, multiple suns appeared, the moon was brighter than the sun, no land existed, deities and mortals maintained frequent contact, a 'world axis' in the form of a tree, ladder or giant man connected the earth with the sky, a devastating flood or fire ended the old order, and so forth. The present work, in multiple volumes, aims to find an origin for this cross-culturally and internally consistent body of traditions in a series of extraordinary natural events relating especially to the earth's transition from the last glacial period to the Holocene. This first volume sets the stage for the interdisciplinary hypothesis. Essential lines of research receive a historical introduction: comparative mythology, catastrophism and the study of the mythical world axis in relation to the earth's rotation. Various astronomical and meteorological interpretations that are not strictly catastrophist are explored for several types of myths about the sun, the moon and the world axis, but leave many of the most intriguing traditions unexplained. It is argued that a structural core of the worldwide mythology of 'creation and destruction', in which the cosmic axis takes pride of place, points to a specific period of dramatic natural circumstances in real prehistoric time. A new synopsis is provided of this universal mythological substrate. It emerges that the mythical world axis cannot have been based on a single object seen or imagined at one of the poles, as has usually been supposed. This surprising conclusion paves the way for the innovative geomagnetic theory proposed in volume 2.

*The Reception of Copernicus' Heliocentric Theory* J. Dobrzycki 2013-06-29 In 1965 the International Union of the History and Philosophy of Science founded the Nicolas Copernicus Committee whose main task was to explore the means by which different nations could co-operate in celebrating the 5 centenary of the great scholar's birth. The committee initiated the publication of a collection of studies dealing with the effect that Copernicus' theory has had on scientific developments in centres of learning all over the world. An Editorial Board, consisting of J. Dobrzycki (Warsaw), J. R. Ravetz (Leeds), H. Sandblad (Goteborg) and B. Sticker (Hamburg), was nominated. We found that our initiative aroused a lively interest among Copernicus scholars; the present volume, with 11 articles by authors from nine American, Asian and European countries, contains the result of their research. It appears in the series 'Studia Coper nicana' by agreement with the Polish Academy of Science, and we hope to publish a number of other contributions in a subsequent volume. We are happy to say that our efforts have been fruitful and that this volume presents not only several in-depth studies, but also a more general survey of the rules governing the evolution of science, rules set within the framework of Copernicus' theory as it developed among various nations and in various scientific institutions over the centuries. It has been shown once again that, 500 years after his birth, the work of Copernicus remains a source of scientific interest and continues to stimulate fresh study and research.

**Escape to Witch Mountain** Alexander Key 2009-08-01 A sci-fi classic returns to print in its true, best, and original form! Science Fiction Literature in East Germany Sonja Fritzsche 2006 East German science fiction enabled its authors to create a subversive space in another time and place. One of the country's most popular genres, it outlined futures that often went beyond the party's official version. Many utopian stories provided a corrective vision, intended to preserve and improve upon East German communism. This study is an introduction to East German science fiction. The book begins with a chapter on German science fiction before 1949. It then spans the entire existence of the country (1949-1990) and outlines key topics essential to understanding the genre: popular literature, socialist realism, censorship, fandom, and international science fiction. An in-depth discussion addresses notions of high and low literature, elements of the fantastic and utopia as critical narrative strategies, ideology and realism in East German literature, gender, and the relation between literature and science. Through a close textual analysis of three science fiction novels, the author expands East German literary history to include science fiction as a valuable source for developing a multi-faceted understanding of the country's short history. Finally, an epilogue notes new titles and developments since the fall of the Berlin Wall.

Memory, Metaphor, and Aby Warburg's Atlas of Images Christopher D. Johnson 2012-09-15 The work of German cultural theorist and art historian Aby Warburg (1866–1929) has had a lasting effect on how we think about images. This book is the first in English to focus on his last project, the encyclopedic Atlas of Images: Mnemosyne. Begun in earnest in 1927, and left unfinished at the time of Warburg's death in 1929, the Atlas consisted of sixty-three large wooden panels covered with black cloth. On these panels Warburg carefully, intuitively arranged some thousand black-and-white photographs of classical and Renaissance art objects, as well as of astrological and astronomical images ranging from ancient Babylon to Weimar Germany. Here and there, he also included maps, manuscript pages, and contemporary images taken from newspapers. Trying through these constellations of images to make visible the many polarities that fueled antiquity's afterlife, Warburg envisioned the Atlas as a vital form of metaphoric thought. While the nondiscursive, frequently digressive character of the Atlas complicates any linear narrative of its themes and contents, Christopher D. Johnson traces several thematic sequences in the panels. By drawing on Warburg's published and unpublished writings and by attending to Warburg's cardinal idea that "pathos formulas" structure the West's cultural memory, Johnson maps numerous tensions between word and image in the Atlas. In addition to examining the work itself, he considers the literary, philosophical, and intellectual-historical implications of the Atlas. As Johnson demonstrates, the Atlas is not simply the culmination of Warburg's lifelong study of Renaissance culture but the ultimate expression of his now literal, now metaphoric search for syncretic solutions to the urgent problems posed by the history of art and culture.

**Rare Earth** Peter D. Ward 2007-05-08 What determines whether complex life will arise on a planet, or even any life at all? Questions such as these are investigated in this groundbreaking book. In doing so, the authors synthesize information from astronomy, biology, and paleontology, and apply it to what we know about the rise of life on Earth and to what could possibly happen elsewhere in the universe. Everyone who has been thrilled by the recent discoveries of extrasolar planets and the indications of life on Mars and the Jovian moon Europa will be fascinated by Rare Earth, and its implications for those who look to the heavens for companionship.

*Minecraft: The Mountain* Max Brooks 2021-03-02 In the thrilling sequel to the New York Times bestselling novel *Minecraft: The Island*, a stranded hero stumbles upon another castaway—and discovers that teamwork might just be the secret to survival. Wandering a vast, icy tundra, the explorer has never felt more alone. Is there anything out here? Did I do the right thing by leaving the safety of my island? Should I give up and go back? So many questions, and no time to ponder—not when dark is falling and dangerous mobs are on the horizon. Gurgling zombies and snarling wolves lurk in the night, and they're closing in. With nowhere to hide, the lone traveler flees up a mountain, trapped and out of options . . . until a mysterious figure arrives, fighting off the horde singlehandedly. The unexpected savior is Summer, a fellow castaway and master of survival in these frozen wastes. Excited to find another person in this

strange, blocky world, the explorer teams up with Summer, whose impressive mountain fortress as a safe haven . . . for now. But teamwork is a new skill for two people used to working alone. If they want to make it home, they will have to learn to work together—or risk losing everything.

**The Lost Constellations** John C. Barentine 2015-10-23 Casual stargazers are familiar with many classical figures and asterisms composed of bright stars (e.g., Orion and the Plough), but this book reveals not just the constellations of today but those of yesteryear. The history of the human identification of constellations among the stars is explored through the stories of some influential celestial cartographers whose works determined whether new inventions survived. The history of how the modern set of 88 constellations was defined by the professional astronomy community is recounted, explaining how the constellations described in the book became permanently “extinct.” Dr. Barentine addresses why some figures were tried and discarded, and also directs observers to how those figures can still be picked out on a clear night if one knows where to look. These lost constellations are described in great detail using historical references, enabling observers to rediscover them on their own surveys of the sky. Treatment of the obsolete constellations as extant features of the night sky adds a new dimension to stargazing that merges history with the accessibility and immediacy of the night sky.
