Manufacturing Whiteness Reto Muller 2001-01-11 In a series of convergent empirical essays, *Manufacturing Whiteness* explores the striking parallels in the social construction of whiteness and gender in colonial depictions of the colonizer/colonized and in contemporary advertising. The past decade has seen a sincere, if belated, willingness among white male scholars to self-critically examine the oppressive social, cultural, and political implications of their whiteness. Building on Jacques Lacan's powerfully original social-psychoanalytic insights into the role of desire in the fetishistic constitution of the subject-in-language, *Manufacturing Whiteness* offers a sophisticated, yet accessible theoretical method for deconstructing ad-content which enables the reader to trace whiteness, "otherness," and other worldliness to the very constitution of latemodern/postmodern western identity.

Organised Crime: a Very Short Introduction Georgios A. Antonopoulos 2018-02-22 For many people around the world, instances of what is described as organised crime may be part of their everyday experience; in their neighbourhoods, their streets, and the places they work and live. Policymakers, law enforcement, and the media rarely fail to bring up the issue when discussing the nature and seriousness of contemporary criminal threats, and the appropriate responses towards them. Many more people are familiar with the notion of organised crime, as the film and TV industry regularly draw on fictional and real figures and situations. Organised crime feels like a tangible, inescapable issue in today's world. In this Very Short introduction, Georgios A. Antonopoulos and Georgios Papanicolaou uncover the reality of organised crime in our world today. Shining a light on the people involved in organised crime, Antonopoulos and Papanicolaou question whether the term 'organised' is used to evoke the image, the operations, and power of a legitimate organisation, such as a corporation. Discussing whether there are particular crimes that the label 'organised crime' applies to, or if any crime can be organised, they also consider what happens when organised crime extends beyond borders. Using examples from across the globe, they analyse the different cultural traditions of organised crime, such as the Mafia, Yakuza, and Triads, and also the nature of organised crime, from arms trafficking and drug dealing to extortion. Finally they explore the methods and agencies in place to control and prevent organised crime. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Amber 2021 David A. Case 2021-06-13 Amber is the collective name for a suite of programs that allow users to carry out molecular dynamics simulations, particularly on biomolecules. None of the individual programs carries this name, but the various parts work reasonably well together, and provide a powerful framework for many common calculations. The term Amber is also used to refer to the empirical force fields that are implemented here. It should be recognized, however, that the code and force field are separate: several other computer packages have implemented the Amber force fields, and other force fields can be implemented with the Amber programs. Further, the force fields are in the public domain, whereas the codes are distributed under a license agreement. The Amber software suite is divided into two parts: AmberTools21, a collection of freely available programs mostly under the GPL license, and Amber20, which is centered around the pmemd simulation program, and which continues to be licensed as before, under a more restrictive license. Amber20 represents a significant change from the most recent previous version, Amber18. (We have moved to numbering Amber releases by the last two digits of the calendar year, so there are no odd-numbered versions.) Please see <https://ambermd.org> for an overview of the most important changes. AmberTools is a set of programs for biomolecular simulation and analysis. They are designed to work well with each other, and with the “regular” Amber suite of programs. You can perform many simulation tasks with AmberTools, and you can do more extensive simulations with the combination of AmberTools and Amber itself. Most components of AmberTools are released under the GNU General Public License (GPL). A few components are in the public domain or have other open-source licenses. See the README file for more information.

Elements of Chemical Reaction Engineering H. Scott Fogler 1999 "The fourth edition of *Elements of Chemical Reaction Engineering* is a completely revised version of the book. It combines authoritative coverage of the principles of chemical reaction engineering with an unsurpassed focus on critical thinking and creative problem solving, employing open-ended questions and stressing the Socratic method. Clear and organized, it integrates text, visuals, and computer simulations to help readers solve even the most challenging problems through reasoning, rather than by memorizing equations."--BOOK JACKET.

Stirling Engine Design Manual William Martini 2013-01-25 For Stirling engines to enjoy widespread application and acceptance, not only must the fundamental operation of such engines be widely understood, but the requisite analytic tools for the stimulation, design, evaluation and optimization of Stirling engine hardware must be readily available. The purpose of this design manual is to provide an introduction to Stirling cycle heat engines, to organize and identify the available Stirling engine literature, and to identify, organize, evaluate and, in so far as possible, compare non-proprietary Stirling engine design methodologies. This report was originally prepared for the National Aeronautics and Space Administration and the U. S. Department of Energy.
