Labour in Global Value Chains in Asia Dev Nathan 2016-10-13 This book brings together a set of studies on labour conditions in global value chains (GVCs) in a variety of sectors, ranging from labour-intensive sectors (garments, fresh fruits, tourism), to medium and high technology sectors (automobiles, electronics and telecom) and knowledge-intensive sectors (IT software services). The studies span a number of countries across Asia - Bangladesh, Cambodia, China, India, Indonesia, Sri Lanka and Vietnam. This book stands out for its grounded and detailed examination of both what is working and what is not working as Asian labour gets more embedded in global value chains. In trying to identify spaces for progressive action and policies in the current GVC-linked global work environment, the book goes against the grain in searching for an alternative to laissez faire forms of globalisation.

Strength in Numbers: The Rising of Academic Statistics Departments in the U. S. Alan Agresti
2012-11-02 Statistical science as organized in formal academic departments is relatively new. With a

few exceptions, most Statistics and Biostatistics departments have been created within the past 60 years. This book consists of a set of memoirs, one for each department in the U.S. created by the mid-1960s. The memoirs describe key aspects of the department's history -- its founding, its growth, key people in its development, success stories (such as major research accomplishments) and the occasional failure story, PhD graduates who have had a significant impact, its impact on statistical education, and a summary of where the department stands today and its vision for the future. Read here all about how departments such as at Berkeley, Chicago, Harvard, and Stanford started and how they got to where they are today. The book should also be of interests to scholars in the field of disciplinary history.

Strong Brands, Strong Relationships Susan Fournier 2015-06-12 From the editor team of the ground-breaking *Consumer-Brand Relationships: Theory and Practice* comes this new volume. *Strong Brands, Strong Relationships* is a collection of innovative research and management insights that build upon the foundations of the first book, but takes the study of brand relationships outside of traditional realms by applying new theoretical frameworks and considering new contexts. The result is an expanded and better-informed account of people's relationships with brands and a demonstration of the important and timely implications of this evolving sub-discipline. A range of different brand relationship environments are explored in the collection, including: online digital spaces, consumer collectives, global brands, luxury brands, branding in terrorist organizations, and the brand relationships of men and transient consumers. This book attends to relationship endings as well as their beginnings, providing a full life-cycle perspective. While the first volume focused on positive relationship benefits, this collection explores dysfunctional dynamics, adversarial and politically-charged relationships, and those that are harmful to well-being. Evocative constructs are leveraged, including secrets, betrayals, anthropomorphism, lying, infidelity, retaliation, and bereavement. The curated collection provides both a deeper theoretical understanding of brand relationship phenomena and ideas for practical application from experiments and execution in commercial practice. *Strong Brands, Strong Relationships* will be the perfect read for marketing faculty and graduate students interested in branding dynamics, as well as managers responsible for stewarding brands.

Handbook of Experimental Economic Methodology Guillaume R. Fréchet 2015-01-02 The Handbook of Experimental Economic Methodology, edited by Guillaume R. Fréchet and Andrew Schotter, aims to confront and debate the issues faced by the growing field of experimental economics. For example, as experimental work attempts to test theory, it raises questions about the proper relationship between theory and experiments. As experimental results are used to inform policy, the utility of these results outside the lab is questioned, and finally, as experimental economics tries to integrate ideas from other disciplines like psychology and neuroscience, the question of their proper place in the discipline of economics becomes less clear. This book contains papers written by some of the most accomplished scholars working at the intersection of experimental, behavioral, and theoretical economics talking about methodology. It is divided into four sections, each of which features a set of papers and a set of comments on those papers. The intention of the volume is to offer a place where ideas about methodology could be discussed and even argued. Some of the papers are contentious---a healthy sign of a dynamic discipline---while others lay out a vision for how the authors think experimental economics should be pursued. This exciting and illuminating collection of papers brings light to a topic at the core of experimental economics. Researchers from a broad range of fields will benefit from the exploration of these important questions.
