*Status of Pollinators in North America* National Research Council 2007-05-13  
Pollinators--insects, birds, bats, and other animals that carry pollen from the male to the female parts of flowers for plant reproduction--are an essential part of natural and agricultural ecosystems throughout North America. For example, most fruit, vegetable, and seed crops and some crops that provide fiber, drugs, and fuel depend on animals for pollination. This report provides evidence for the decline of some pollinator species in North America, including America's most important managed pollinator, the honey bee, as well as some butterflies, bats, and hummingbirds. For most managed and wild pollinator species, however, population trends have not been assessed because populations have not been monitored over time. In addition, for wild species with demonstrated declines, it is often difficult to determine the causes or consequences of their decline. This report outlines priorities for research and monitoring that are needed to improve information on the status of pollinators and establishes a framework for conservation and restoration of pollinator species and communities.

Garden Plants for Scotland Kenneth Cox 2015-02-01 Scotland is one of the best places in the world to garden. Its maritime climate, ample rainfall, and the rarity of severe droughts and really hot weather mean that huge numbers of plants grow well there. But the climate varies considerably - from the colder, wetter, windier mountainous areas to the west coast where tender plants can be grown outdoors all year round - and choosing plants that are suited to the local conditions is critical to success. Kenneth Cox and Raoul Curtis-Machin have evaluated the performance of thousands of plants in gardens all over Scotland, drawing on the knowledge and experience of many gardeners and nurserymen, and in this book they describe - with over 800 photographs - the most reliable shrubs, conifers, trees, fruit and perennials for Scotland. In

this book Scottish gardeners will find accurate information and hundreds of great plants ideally suited to where they live.
