Theorizing Historical Consciousness Peter C. Seixas 2004-01-01 Our understanding of the past shapes our sense of the present and the future: this is historical consciousness. While academic history, public history, and the study of collective memory are thriving enterprises, there has been only sparse investigation of historical consciousness itself, in a way that relates it to the policy questions it raises in the present. With Theorizing Historical Consciousness, Peter Seixas has brought together a diverse group of international scholars to address the problem of historical consciousness from the disciplinary perspectives of history, historiography, philosophy, collective memory, psychology, and history education. Historical consciousness has serious implications for international relations, reparations claims, fiscal initiatives, immigration, and indeed, almost every contentious arena of public policy, collective identity, and personal experience. Current policy debates are laced with mutually incompatible historical analogies, and identity politics generate conflicting historical accounts. Never has the idea of a straightforward 'one history that fits all' been less workable. Theorizing Historical Consciousness sets various theoretical approaches to the study of historical consciousness side-by-side, enabling us to chart the future study of how people understand the past.

Contractual Management Ralph Schuhmann 2019-10-24 The Concept Contractual Management offers a holistic approach to managerial decision-making based on contracts or business processes that are related to contracts. It explains management from the point of view of the contract, just as it interprets the contract from the point of view of management. Thus, the approach highlights the great inherent potential of contracts for managing companies, transactions and business relationships. The book addresses students as well as practitioners and gives insights into the usage of contracts to manage companies or relationships. It covers contract handling from preliminary deliberations to negotiations, implementation, and all the way to the evaluation of the contract within the company. Furthermore, it provides competencies to design and implement a contract and to organize the relevant processes. The Content In Part 1, the book explains the theoretical foundations of Contractual Management; in Part 2, the application of the approach is illustrated through case studies which cover various sectors, industries, company sizes, contract types, and management situations. Theory part: Contractual Management – A Holistic Approach to a Diverse Issue. Case study part: 11 case studies arranged according to specific contract-related topics: Information and Communication – Change – Enterprise Networks

– Conflict – Accounting and Financing – Legal Compliance – Societal Steering. The Editors Professor Dr. Ralph Schuhmann: After holding a senior management position in industry, Ralph Schuhmann now teaches Business Law at Ernst-Abbe-Hochschule in Jena, Germany. He is the scientific director of the Contractual Management Institute at SRH Hochschule Berlin and has published various articles on contract law and contract management. Professor Dr. Bert Eichhorn: Before his appointment as professor for International Law and Business Law at SRH Hochschule Berlin, Bert Eichhorn worked as a legal consultant at the EU Parliament and as a lawyer. He has published numerous articles in national and international scientific journals in the area of contract management and international law. He is the managing director of the Contractual Management Institute at SRH Hochschule Berlin.

Experiments in Ethics Kwame Anthony Appiah 2010-03-30 In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of “experimental philosophy,” provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.

Leadership in Game of Thrones Brigitte Biehl 2021-10-13 Winning power in Westeros is hard, but holding power is much harder. The book analyzes strategies of leadership in the popular television series as an inspiration for today's uncertain times and our corporate world, bringing together research on TV series with management studies. The medieval fantasy world presents emotional and larger-than-life leadership archetypes: charismatic, authentic, privileged, masculine, female, motherly, lonely, romantic and disabled leaders. They are constructed and deconstructed. Hands, penises, and heads are chopped off. In this way, the series also celebrates the power of those who follow or resist, and always influence their leaders. Dr. Brigitte Biehl (Biehl-Missal) is Professor for Media and Communication Management at the SRH Berlin University of Applied Sciences, School of Popular Arts in Berlin, acting as Head of Studies B.A. Creative Industries Management, M.A. International Management Focus on Creative Leadership, and director of the Institute for Professional Development (IWK). Her background is in theater, film and media studies and business studies; she has published widely on art, aesthetics and management. This book is a translation of the original German 1st edition *Leadership in Game of Throne* by Brigitte Biehl, published by Springer Fachmedien Wiesbaden

GmbH, part of Springer Nature in 2020. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

Technology and Vocational Education for Sustainable Development Margarita Pavlova 2008-12-14

Empowerment is the overarching idea used in this book. The term has a variety of meanings in different sociocultural and political contexts, including “self-strength, control, self-power, self-reliance, own choice, life of dignity in accordance with one’s values, capable of fighting for one’s rights, independence, own decision making, being free, awakening, and capability” (The World Bank, 2002, p. 10). However, the World Bank report observed that most definitions focus on issues of “gaining power and control over decisions and resources that determine the quality of one’s life” (p. 10). This interpretation of empowerment provides a useful starting point for the development of the series of interconnected arguments explored here. Establishment of the basis for understanding, identifying and developing strategies through education necessary for individuals to be able to make choices that influence the quality of their lives is the main aim of this book. There are a number of assumptions and boundaries that frame this analysis. First, the book focuses on “agents”; however, empowerment is often conceptualised in terms of relationships between agency and structure (e. g. , Alsop, Bertelsen, & H- land, 2006). Agency could be defined as “an actor’s or group’s ability to make purposeful choices – that is, the actor is able to envisage and purposively choose options” (p. 11).

The International status of education about the Holocaust Carrier, Peter 2015-01-14 How do schools worldwide treat the Holocaust as a subject? Are representations of the Holocaust always accurate, balanced and unprejudiced in curricula and textbooks? This study compares representations of the Holocaust in school textbooks and national curricula. It highlights evolving practices worldwide and formulates recommendations that will help policy-makers provide the educational means by which pupils may develop Holocaust literacy.

Mastering the Art of French Cooking Julia Child 1976 Anyone can cook in the French manner anywhere, wrote Mesdames Beck, Bertholle, and Child, with the right instruction. And here is the book that, for forty years, has been teaching Americans how. *Mastering the Art of French Cooking* is for both seasoned cooks and beginners who love good food and long to reproduce at home the savory delights of the classic cuisine, from the historic Gallic masterpieces to the seemingly artless perfection of a dish of spring-green peas. This beautiful book, with more than one hundred instructive illustrations, is revolutionary in its approach because: It leads the cook infallibly from the buying and handling of raw ingredients, through each essential step of a recipe, to the final creation of a delicate confection. It breaks down the classic cuisine into a logical sequence of themes and variations rather than presenting an endless and diffuse catalogue of recipes; the focus is on key recipes that form the backbone of French cookery and lend themselves to an infinite number of elaborations bound to increase anyone’s culinary repertoire.

An Introduction to Molecular Biotechnology Michael Wink 2013-11-14 Molecular biotechnology continues to triumph, as this textbook testifies - edited by one of the academic pioneers in the field and written by experienced professionals. This completely revised second edition covers the entire spectrum, from the fundamentals of molecular and cell biology, via an overview of standard methods and technologies, the application of the various "-omics", and the development of novel drug targets, right up to the significance of system biology in biotechnology. The whole is rounded off by an introduction to industrial biotechnology as well as chapters on company foundation, patent law and marketing. The new edition features: - Large format and full color throughout - Proven structure according to basics, methods, main topics and economic perspectives - New sections on system biology, RNA interference, microscopic techniques, high throughput sequencing, laser applications, biocatalysis, current biomedical applications and drug approval - Optimized teaching with learning targets, a glossary containing around 800 entries, over 500 important abbreviations and further reading. The only resource for those who are seriously interested in the topic. Bonus material available online free of charge: www.wiley-vch.de/home/molecbiotech

Holocaust education in a global context Fracapane, Karel 2014-01-24 "International interest in Holocaust education has reached new heights in recent years. This historic event has long been central to cultures of remembrance in those countries where the genocide of the Jewish people occurred. But other parts of the world have now begun to recognize the history of the Holocaust as an effective means to teach about mass violence and to promote human rights and civic duty, testifying to the emergence of this pivotal historical event as a universal frame of reference. In this new, globalized context, how is the Holocaust represented and taught? How do teachers handle this excessively complex and emotionally loaded subject in fast-changing multicultural European societies still haunted by the crimes perpetrated by the Nazis and their collaborators? Why and how is it taught in other areas of the world that have only little if any connection with the history of the Jewish people? Holocaust Education in a Global Context will explore these questions."--page 10.

Language and Communication David Jollands 1984 Briefly discusses aspects of language and communication, such as vocal organs, alphabets, sound, musical instruments, electronics, and communication satellites.

The Greatest Treasure Hunt in History: The Story of the Monuments Men (Scholastic Focus) Robert M. Edsel 2019-01-29 Robert M. Edsel brings the story of his #1 NYT bestseller for adults *The Monuments Men* to young readers for the first time in this dynamic, narrative nonfiction project packed with photos. Robert M. Edsel, #1 New York Times bestselling author of *The Monuments Men*, brings this story to young readers for the first time in a sweeping, dynamic adventure detailing history's greatest treasure hunt. As the most

destructive war in history ravaged Europe, many of the world's most cherished cultural objects were in harm's way. *The Greatest Treasure Hunt in History* recounts the astonishing true story of 11 men and one woman who risked their lives amidst the bloodshed of World War II to preserve churches, libraries, monuments, and works of art that for centuries defined the heritage of Western civilization. As the war raged, these American and British volunteers -- museum curators, art scholars and educators, architects, archivists, and artists, known as the Monuments Men -- found themselves in a desperate race against time to locate and save the many priceless treasures and works of art stolen by Adolf Hitler and the Nazis.

Augmented Learning Eric Klopfer 2008 New technology has brought with it new tools for learning, and research has shown that the educational potential of video games resonates with teachers and pupils alike. Klopfer here describes the largely untapped potential of mobile learning games to make a substantial impact on education.

Legumes in Cropping Systems D. Murphy-Bokern 2017 Based on contributions from members of the Legumes Future research consortium and complemented by articles from other research teams, this book provides a comprehensive overview of knowledge relevant to developing legume-supported cropping systems in Europe. It reflects the growing interest in using legumes to improve cropping and the current debate over the imbalance in European systems where the low use of legumes has caused concern in the agricultural policy community. This book supports informed debate and decision-making that addresses the associated challenges. *Legumes in Cropping Systems* presents current knowledge on this subject across 15 coordinated chapters. Each chapter addresses a specific aspect of legume cropping and provides insight into the relevant literature to help support understanding and explore the underlying processes that influence cropping system development. This book includes coverage of: ♦ the role of legumes in cropping systems; ♦ the role of legumes in European protein supplies; ♦ environmental effects of grain and forage legumes; ♦ current status of the major grain and forage legume crops; ♦ economic effects; and ♦ policy development. Written by an international team of expert authors and presented in full-colour throughout, this book is an invaluable resource for researchers in agronomy and crop sciences, agricultural professionals, policy makers, and students.

Holocaust Images and Picturing Catastrophe Angi Buettner 2016-12-05 *Holocaust Images and Picturing Catastrophe* explores the phenomenon of Holocaust transfer, analysing the widespread practice of using the Holocaust and its imagery for the representation and recording of other historical events in various media sites. It investigates the use of Holocaust imagery in political and legal discourses, in critical thinking and philosophy, as well as in popular culture, to provide a fresh theorisation of the manner in which the Holocaust comes loose from its historical context and is applied to events and campaigns in the contemporary public sphere. Richly illustrated with concrete examples, including prominent, international animal rights activism, the Israeli-Palestinian conflict and the genocide in Rwanda, this book traces the visual rhetoric of Holocaust imagery and its application to events other than the genocide of Jewish people. With its discussion of the wide range of issues arising with this form of 'Holocaust-transfer', the generalization of the Holocaust as a metaphor in

representations of catastrophe, as well as in other cultural locations, Holocaust Images and Picturing Catastrophe will appeal to those working in the fields of holocaust studies, cultural and visual culture studies, sociology, and media studies.

Absinthe of Malice Pat Browning 2008-12-01 Old crimes come back to haunt a small California town in this intriguing urban cozy. ABSINTHE OF MALICE introduces Penny Mackenzie, Lifestyle reporter for The Pearl Outrider, and a cast of unforgettable characters who find their lives turned upside down when old secrets and new secrets all come to light after chance discovery of a skeleton in a cotton field leads to murder...and romance.

Modern Phytomedicine Iqbal Ahmad 2006-12-13 This timely and original handbook paves the way to success in plant-based drug development, systematically addressing the issues facing a pharmaceutical scientist who wants to turn a plant compound into a safe and effective drug. Plant pharmacologists from around the world demonstrate the potentials and pitfalls involved, with many of the studies and experiments reported here published for the first time. The result is a valuable source of information unavailable elsewhere.

Simplissime Jean-François Mallet 2016-07-14 Learn to cook classic French cuisine the easy way with this French bestseller from professionally trained chef Jean-Francois Mallet. Taking cooking back to basics, Simplissime is bursting with easy-to-follow and quick recipes for delicious French food. Each of the 160 recipes in this book is made up of only 2-6 ingredients, and can be made in a short amount of time. Recipe steps are precise and simple, accompanied by clear photographs of each ingredient and finished dish. Cooking has never been so easy!

Identity Politics in the Age of Genocide David B. MacDonald 2007-09-28 In an era of globalization and identity politics, this book explores how Holocaust imagery and vocabulary have been appropriated and applied to other genocides. The author examines how the Holocaust has impacted on other ethnic and social groups, asking whether the Holocaust as a symbol is a useful or destructive means of reading non-Jewish history. This volume: explains the rise of the Holocaust as a gradual process, charting how its importance as a symbol has evolved, providing a theoretical framework to understand how and why non-Jewish groups choose to invoke 'holocausts' to apply to other events explores the Holocaust in relation to colonialism and indigenous genocide, with case studies on America, Australia and New Zealand analyzes the Holocaust in relation to war and genocide, with case studies on the Armenian genocide, the Rape of Nanking, Serbia and the Rwandan genocide examines how the Holocaust has been used to promote animal rights. Demonstrating both the opportunities and pitfalls the Holocaust provides to non-Jewish groups who seek to represent their collective histories, this book fills a much needed gap on the use of the Holocaust in contemporary identity politics and will be of interest to students and researchers of politics, the Holocaust and genocide.

Empire, Colony, Genocide A. Dirk Moses 2008-06-01 In 1944, Raphael Lemkin coined the term "genocide" to describe a foreign occupation that destroyed or permanently crippled a subject population. In this tradition, Empire, Colony, Genocide embeds genocide in the epochal geopolitical transformations of the past 500 years: the European colonization of the globe, the rise and fall of the continental land empires, violent decolonization, and the formation of nation states. It thereby challenges the customary focus on twentieth-century mass crimes and shows that genocide and "ethnic cleansing" have been intrinsic to imperial expansion. The complexity of the colonial encounter is reflected in the contrast between the insurgent identities and genocidal strategies that subaltern peoples sometimes developed to expel the occupiers, and those local elites and creole groups that the occupiers sought to co-opt. Presenting case studies on the Americas, Australia, Africa, Asia, the Ottoman Empire, Imperial Russia, and the Nazi "Third Reich," leading authorities examine the colonial dimension of the genocide concept as well as the imperial systems and discourses that enabled conquest. Empire, Colony, Genocide is a world history of genocide that highlights what Lemkin called "the role of the human group and its tribulations."

Psychology of Communication Jessica Röhner 2021-05-31 This successful textbook on the psychology of communication explains - here in English for the first time - how human communication works in a very understandable way. It begins with the explanation of central terms and the explanation of known communication models (e.g. the models according to Schulz von Thun, Watzlawick, Hargie and colleagues), then describes means of non-verbal and verbal communication and ends with a clear and structured summary of communication forms. Concrete fields of application, stumbling blocks (e.g. intercultural differences in communication), practical examples and digressions in the book round off what has been read and consolidate what has been learned. In addition, free learning materials are available on the Internet with which readers can test their knowledge acquisition.

Exploring Plant Cells for the Production of Compounds of Interest Sonia Malik 2021-04-10 Natural compounds obtained from plants represent a tremendous global market due to their use as food additives, cosmetics, in agriculture and in pharmaceuticals. This book provides up-to-date information on various strategies and methods for producing compounds of interest. Leading researchers discuss the latest advances in environmentally friendly natural compound production from plants, making the book a valuable resource for biotechnologists, pharmacists, food technologists and researchers working in the medical and healthcare industries.

Advancing the Learning Agenda in Jewish Education Jon A. Levisohn 2018 This volume is the first of its kind to bring together scholars from inside Jewish education and from the learning sciences to address core elements of Jewish education: its desired outcomes, the kinds of learning needed to achieve these, and how those kinds of learning actually occur.

Perceptions of the Holocaust in Europe and Muslim Communities Günther Jikeli 2012-11-08 The way people think about the Holocaust is changing. The particular nature of the transformation depends on people's historical perspectives and how they position themselves and their nation or community vis-à-vis the tragedy. Understandably, European Muslims perceive the Holocaust as less central to their history than do other Europeans. Yet while the acknowledgement and commemoration of the horrors of the Holocaust are increasingly important in Europe, Holocaust denial and biased views on the Holocaust are widespread in European Muslims' countries of origin. In this book, a number of distinguished scholars and educators of various backgrounds discuss views of the Holocaust. Problematic views are often influenced by a persistent attitude of Holocaust denial which is derived, in part, from discourses in the Muslim communities in their countries of origin. The essays collected here explore the backgrounds of these perceptions and highlight positive approaches and developments. Many of the contributions were written by people working in the field and reflecting on their experiences. This collection also reveals that problematic views of the Holocaust are not limited to Muslim communities.

Co-Evolution of Secondary Metabolites Jean-Michel Mérillon 2020-02-23 This Reference Work is devoted to plant secondary metabolites and their evolutionary adaptation to different hosts and pests. Secondary metabolites play an important biological role in plants' defence against herbivores, abiotic stresses and pathogens, and they also attract beneficial organisms such as pollinators. In this work, readers will find a comprehensive review of the phytochemical diversity, modification and adaptation of secondary metabolites, and the consequences of their co-evolution with plant parasites, pollinators, and herbivores. Chapters from expert contributors are organised into twelve sections that collate the current knowledge in intra-/inter-specific diversity in plant secondary metabolites, changes in secondary metabolites during plants' adaptation to different environmental conditions, and co-evolution of host-parasite metabolites. Among the twelve themed parts, readers will also discover expert analysis on the genetics and chemical ecology evolution of secondary metabolites, and particular attention is also given to allelochemicals, bioactive molecules in plant defence and the evolution of sensory perception in vertebrates. This reference work will appeal to students, researchers and professionals interested in the field of plant pathology, plant breeding, biotechnology, agriculture and phytochemistry.

Sustainability Curriculum Framework 2010 "The purpose of this document is to provide information and guidance to curriculum developers and policy makers on how education for sustainability may be effectively incorporated into curriculum. It achieves this through a framework that describes what students may need to learn to live sustainably, and considers the most appropriate times and environments in which these learnings should occur."--P. 5.

Biotechnology for Beginners Reinhard Renneberg 2016-11-25 Biotechnology for Beginners, Second Edition,

presents the latest information and developments from the field of biotechnology—the applied science of using living organisms and their by-products for commercial development—which has grown and evolved to such an extent over the past few years that increasing numbers of professionals work in areas that are directly impacted by the science. For the first time, this book offers an exciting and colorful overview of biotechnology for professionals and students in a wide array of the life sciences, including genetics, immunology, biochemistry, agronomy, and animal science. This book also appeals to the lay reader without a scientific background who is interested in an entertaining and informative introduction to the key aspects of biotechnology. Authors Renneberg and Demain discuss the opportunities and risks of individual technologies and provide historical data in easy-to-reference boxes, highlighting key topics. The book covers all major aspects of the field, from food biotechnology to enzymes, genetic engineering, viruses, antibodies, and vaccines, to environmental biotechnology, transgenic animals, analytical biotechnology, and the human genome. This stimulating book is the most user-friendly source for a comprehensive overview of this complex field. Provides accessible content to the lay reader who does not have an extensive scientific background Includes all facets of biotechnology applications Covers articles from the most respected scientists, including Alan Gutmacher, Carl Djerassi, Frances S. Ligler, Jared Diamond, Susan Greenfield, and more Contains a summary, annotated references, links to useful web sites, and appealing review questions at the end of each chapter Presents more than 600 color figures and over 100 illustrations Written in an enthusiastic and engaging style unlike other existing theoretical and dry-style biotechnology books

Avian Genomics in Ecology and Evolution Robert H. S. Kraus 2019-07-10 Birds catch the public imagination like no other group of animals; in addition, birders are perhaps the largest non-professional naturalist community. Genomics and associated bioinformatics have revolutionised daily life in just a few decades. At the same time, this development has facilitated the application of genomics technology to ecological and evolutionary studies, including biodiversity and conservation at all levels. This book reveals how the exciting toolbox of genomics offers new opportunities in all areas of avian biology. It presents contributions from prominent experts at the intersection of avian biology and genomics, and offers an ideal introduction to the world of genomics for students, biologists and bird enthusiasts alike. The book begins with a historical perspective on how genomic technology was adopted by bird ecology and evolution research groups. This led, as the book explains, to a revised understanding of avian evolution, with exciting consequences for biodiversity research as a whole. Lastly, these impacts are illustrated using seminal examples and the latest discoveries from avian biology laboratories around the world.

Understanding and Teaching the Holocaust Laura Hilton 2020 Few topics in modern history draw the attention that the Holocaust does. The Shoah has become synonymous with unspeakable atrocity and unbearable suffering. Yet it has also been used to teach tolerance, empathy, resistance, and hope. Understanding and Teaching the Holocaust provides a starting point for teachers in many disciplines to illuminate this crucial event in world history for students. Using a vast array of source materials--from literature and film to survivor testimonies and interviews--the contributors demonstrate how to guide students through these sensitive and painful subjects within their specific historical and social contexts. Each chapter provides pedagogical case studies for teaching content such as antisemitism, resistance and rescue, and the

postwar lives of displaced persons. It will transform how students learn about the Holocaust and the circumstances surrounding it.

Daily Poison Johann G. Zaller 2020-10-28 This book is a sound science report about the consequences of pesticides to nature, health and environment. The book shares essential insights into the use of pesticides in agriculture, discusses the politics, rhetoric and profits involved, addresses the potential health and ecological risks of pesticides in our daily lives, and debates possible solutions. Does sustainable agriculture exist, and is agriculture without pesticides possible at all? Moreover, the author gives insight into his scientific work, the set-up of the experiments, and also writes about his very own experiences with the media and press after publication of his studies. For many years, Johann G. Zaller, an ecologist at the University of Natural Resources and Life Sciences in Vienna, and his team, have been researching applied chemicals and their effects on the environment. Their findings, together with relevant literature and media reports, are presented in this book, which offers a unique resource for anyone who wants to know the nature and background of pesticides and how we come into contact with them in our daily lives.
