The Practical Guide to Celestial Navigation Phil Somerville 2021-10-14 The practical guide to celestial navigation - know what to do step by step, understand why you're doing it, and be confident that you can put it into practice when on board. Did you know that a person standing on the equator is effectively travelling at 900mph? And did you know that you can use this information to work out where you are in the world, to an accuracy of about 3 or 4 miles? No GPS, no computers. Just a sextant, some tables from an Almanac and the knowledge in this book. It's the only back up if the GPS goes down, so it's a matter of safety. If you want to qualify as a commercial skipper/superyacht captain you need to know how to carry out celestial navigation. And if you want to pass the RYA Ocean Yachtmaster™ exam, you need to know it too. It's a major stumbling block for many sailors wanting or needing to take their next qualifications, and the other books on the market are complex and often assume some prior understanding. This book fulfils the need for a clear explanation of celestial navigation, illustrated with colour diagrams and including unique checklist sheets to enable you to repeat all those calculations you learned back at home, when you're on deck. Without overwhelming the reader with a load of theory from the off, the author breaks down what you need to do, step by step, explaining why at every point - giving the information context, and making it more interesting and memorable. He has trained students in this subject for years, and here he's able to use his experiences of what works, and what are the common pitfalls - he even includes a troubleshooting chapter near the end, going through errors commonly made, and how to spot them. The objective is that readers will finish the book not only knowing what to do, but really understanding why, and being able to make sense of it all again later (rather than just getting through an exam and finding themselves at a loss when on deck). The author also includes time-tested 'proformas' - quick reference sheets that sailors can refer to when they come to putting the theory into practice on board, avoiding the terrifying 'cold start' that most sailors experience when they suddenly need to put their theoretical knowledge to the test in the real world.

Practical Skipper Bill Johnson 2021-08-05 When you learn how to skipper a yacht the practical courses cover a whole range of activities, from passage planning to pilotage and berthing. The way you learn about these elements on a course is usually like this: - the briefing, where the instructor prepares you for the exercise. He should explain what we're trying to achieve, how it's going to work, and what the skipper and crew need to do - the practical activity - you all have a go - the debriefing afterwards, where you discuss what happened and how it went, and take notes of what to remember. At the end of the course, you will have had a go at all the important stuff you have to do in the course of sailing the yacht, but you'll probably struggle to remember all the essential bits: the all-important briefing, and the sequence of things you have to remember. This book is the answer. Containing all the author's own briefing notes and concise explanations, it covers every activity a skipper will need to carry out. Using bullet points, handy checklists and simple diagrams, this book is a unique resource for all skippers - reassurance for new skippers that they haven't forgotten something vital, and a reminder for the more experienced. These are the notes you wish you'd written when you attended your sailing course, and had to hand when revising for your exam or refreshing your knowledge later.

Manoeuvring Bill Johnson 2013-07-05 This is a unique, practical, hands-on guide to boat manoeuvring. Manoeuvring a yacht under engine at close quarters in a marine of close to other (expensive!) boats can be a daunting prospect for the inexperienced skipper - but it has to be done in order to take your boat off a pontoon to go sailing, and to berth her after a day on the water. Here at last is a well organised visual guide to coping in every

possible combination of wind and tide. Laid out in a very clear fashion, with one manoeuvre per page and in a handy wiro format, this is the ideal teach yourself guide, and the perfect on-board aide memoire. It will be a godsend to every nervous helmsman, and a good talking point for crew!
